Part 6 - Project Description

6a. Briefly summarize the overall project. You can provide more detail in 6b. [\[help\]](#)

This proposal includes the replacement of the concrete bulkhead with a new rock bulkhead the footing of the base rocks will be +/-3' or to refusal, whichever is reached first, with the remaining rocks stacked on top to total +/-6-7' above beach grade. The total linear distance of the bulkhead will be +/-55'. The existing bulkhead comes to a sharp point approximately half way along the shoreline distance. This will be removed to straighten out the bulkhead alignment to connect to the neighboring bulkheads. At the center point, the bulkhead will be moved landward +/-18'. Total restoration of upper intertidal habitat by moving the bulkhead will be +/-495sf. The armor rock will be placed into the substrate +/-3' with the remaining rocks stacked on top of them. The quarry spalls will be placed behind the armor rock and filter fabric placed between the spalls and the bank. Once the bulkhead is installed, the old bulkhead will be removed along with the material between the two structures. This material will be placed on the beach for nourishment and/or placed upland. All materials and equipment will access the site by barge. Precast concrete steps will be built into the bulkhead to provide beach access.

6b. Describe the purpose of the project and why you want or need to perform it. [\[help\]](#)

The existing bulkhead has reached its end of life for ability to protect the existing primary structure. The concrete in the bulkhead is deteriorating and eventually, total failure will occur. To continue to protect the SFR, a rock bulkhead will replace the existing concrete bulkhead.

6e. Describe how you plan to construct each project element checked in 6d. Include specific construction methods and equipment to be used. [\[help\]](#)

- Identify where each element will occur in relation to the nearest waterbody.
- Indicate which activities are within the 100-year floodplain.

The rock bulkhead will be installed landward of the existing concrete bulkhead, while the old bulkhead is still in tact. The base rocks will be placed into the substrate and then the remaining rocks and spalls placed as per the plans. Then the old bulkhead will be removed from the shoreline. This method will reduce the concern for discharge of material during the construction.

6f. What are the anticipated start and end dates for project construction? (Month/Year) [\[help\]](#)

- If the project will be constructed in phases or stages, use [JARPA Attachment D](#) to list the start and end dates of each phase or stage.

Start Date: 08/15/2023 . End Date: 09/08/2023 .

See JARPA Attachment D
