The department determines there is uncertainty as to the probable success of the proposed restoration or creation;                                                                                                                                                                                                                                                                                                                                                                                                                                     |                                                                            |                                                                             |                              |                                                                                                                                           |                              |                                                                                                                                                                                                                                                                             |
| 2. A significant period of time will elapse between the impact caused by the development proposal and the establishment of wetland functions at the mitigation site;                                                                                                                                                                                                                                                                                                                                                                                      |                                                                            |                                                                             |                              |                                                                                                                                           |                              |                                                                                                                                                                                                                                                                             |
| 3. The proposed mitigation will result in a lower category wetland or reduced functions relative to the wetland being impacted; ((or))                                                                                                                                                                                                                                                                                                                                                                                                                    |                                                                            |                                                                             |                              |                                                                                                                                           |                              |                                                                                                                                                                                                                                                                             |
| 4. The proposed mitigation site is not within the same 10-digit hydrologic unit, as defined in the Federal Standards and Procedures for the National Watershed Boundary Dataset: United States Geological Survey, 2022, as the proposed impacts;                                                                                                                                                                                                                                                                                                          |                                                                            |                                                                             |                              |                                                                                                                                           |                              |                                                                                                                                                                                                                                                                             |
| 5. The proposed mitigation site differs from the proposed impact area in hydrogeomorphic class, Cowardin system or class, or other fundamental habitat characteristics;                                                                                                                                                                                                                                                                                                                                                                                   |                                                                            |                                                                             |                              |                                                                                                                                           |                              |                                                                                                                                                                                                                                                                             |
| 6. The proposed impact site contains documented habitat for federal or state listed endangered, threatened, sensitive, or candidate species or King County species of local importance; or                                                                                                                                                                                                                                                                                                                                                                |                                                                            |                                                                             |                              |                                                                                                                                           |                              |                                                                                                                                                                                                                                                                             |
| 7. The alteration causing the impact was ((an)) unauthorized ((impact)).                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |                                                                            |                                                                             |                              |                                                                                                                                           |                              |                                                                                                                                                                                                                                                                             |
| E. ((The department may decrease the mitigation ratios provided in subsections B. and C. of this section under the following circumstances)) When the use of wetland mitigation bank or in lieu fee program credits is approved as off-site compensatory mitigation under K.C.C. 21A.24.133, wetland mitigation ratios are as follows:                                                                                                                                                                                                                    |                                                                            |                                                                             |                              |                                                                                                                                           |                              |                                                                                                                                                                                                                                                                             |

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <ul style="list-style-type: none"><li>○ <b>Rehabilitation:</b> improves or repairs the environmental processes and functions of a wetland.</li><li>○ <b>Enhancement:</b> improve specific wetland function(s). Enhancement results in a net loss of wetland area.</li></ul> <p><i>Policy Analysis:</i></p> <ul style="list-style-type: none"><li>• “wetland values” could be added as a consideration for mitigation measures. This is a policy choice.</li><li>• Category I forested wetlands may take more than 100 years to establish. Ecology guidance recommends higher ratios for this type of wetland, including 1:1 R/C and 20:1 E for wetland reestablishment or creation and wetland enhancement. This is a policy choice.</li><li>• Proposed changes to mitigation ratios are highlighted in pink. These ratios align with the recommended ratios in Ecology guidance. In instances where the mitigation is listed as “case-by-case” or “not allowed”, wetlands with these special characteristics are considered unique, rare, and/or irreplaceable. Impacts could create a net loss no matter what compensation is proposed or must be considered in conjunction with specific mitigation proposals.</li><li>• The existing code does not address mitigation for indirect impacts. Indirect impacts are those that have adverse effects on wetlands that results in a reduction of wetland function but are outside the footprint of direct impact. Adding this provision is consistent with Ecology guidance, which supports mitigating indirect impacts at half of the amount of direct impacts. This is a policy choice.</li><li>• This mitigation could be changed to “creation or reestablishment” for consistency.</li></ul> |

----------------------------------------|
| <p>1. ((The applicant demonstrates by documentation submitted by a qualified wetland specialist that the proposed mitigation actions have a very high likelihood of success based on hydrologic data and prior experience;</p> <p>2. The applicant demonstrates by documentation by a qualified wetland specialist that the proposed actions for compensation will provide functions and values that are significantly greater than the wetland being impacted;</p> <p>3. The applicant demonstrates that the proposed actions for mitigation have been conducted in advance of the impact caused by the development proposal and that the actions are successful; or</p> <p>4. In wetlands where several wetland hydrogeomorphic classes, including, but not limited to depressional, slope, riverine and flow through, are found within one delineated boundary, the department may decrease the ratios if:</p> <p>a. impacts to the wetland are all within an area that has a different hydrogeomorphic class from the one used to establish the category;</p> <p>b. the category of the area with a different class is lower than that of the entire wetland; and</p> <p>c. the applicant provides adequate hydrologic and geomorphic data to establish that the boundary between the hydrogeomorphic classes lies outside of the footprint of the impacts.)) For use of wetland mitigation banks certified under Chapter 173-700 WAC, the amount of compensatory mitigation required for impacts located in the bank service area shall be as follows:</p> <p>a. For direct impacts to wetlands and wetland buffers, the ratio shall be consistent with the approved mitigation banking instrument. If the ratio recommended in the mitigation banking instrument is less than one bank credit to one acre of direct permanent wetland impact, then a ratio of one bank credit to one wetland impact acre shall be used;</p> <p>b. For indirect wetland impacts, one half of the ratio recommended in the approved mitigation banking instrument; and</p> <p>c. For long-term temporary impacts, one quarter of the ratio recommended in the approved mitigation banking instrument;</p> <p>2. For use of the King County mitigation reserves program or a state or federally authorized in lieu fee program:</p> <p>a. For direct, indirect, and long-term temporary impacts to wetlands located in the in lieu fee service area, the amount of compensatory mitigation required shall be consistent with the in lieu fee program instrument and result in no net loss of wetland functions and values; and</p> <p>b. For impacts to wetland buffers, the ratio shall be one to one; and</p> <p>3. Compensatory mitigation for other approved off-site mitigation options shall be consistent with ratios in subsections B., C., and D. of this section.</p> <p>F. For temporary ((alterations)) impacts to a wetland or its buffer that are predominately woody vegetation, the department may require mitigation in addition to restoration of the altered wetland or buffer; and</p> <p>G. Mitigation of ((an alteration)) impacts to a buffer of a wetland that occurs along an aquatic area lake shoreline in accordance with an allowed alteration under this chapter shall include, but is not limited to, on-site revegetation, maintenance, and other restoration of the buffer or setback area to the maximum extent practical.</p> |                             |                              | <ul style="list-style-type: none"><li>Executive staff indicate that this ratio should be based off of forested Category I wetlands, and therefore the ratio should be 6:1.</li><li>Ecology guidance states that most agencies accept one-half of the recommended ratios for permanent conversions. The changes highlighted in green identify changes in ratios. These are consistent with this guidance.</li><li>The proposed ordinance includes new criteria for when mitigation ratios can be increased. These changes would support replacing functions to the area closest to where the impacts occur and where there is a similar ecosystem type.</li><li>The proposed ordinance would remove options for mitigation ratio reductions and replace it with established ratios. Executive staff indicate that the existing language was written when mitigation banking was newly implemented and has been rarely used since. Executive staff also indicate that the proposed changes would provide greater transparency and create consistency with Ecology guidance.</li><li>In practice, wetland mitigation banks are wetland restoration projects that are constructed prior to wetland impacts for the primary purpose of creating and selling mitigation credit for future projects. In-lieu fee programs sell mitigation credits to fund future wetland restoration projects. Both types may be publicly owned or nonprofit and undergo review by tribal, state, and federal agencies. The County operates the only approved in-lieu fee program in King County. The mitigation ratios can differ based on the instrument. The proposed language adds new language to reflect these existing programs.</li></ul> |

| <p><b>21A.24.342 - Wetlands - agreement to modify mitigation ratios.</b></p> <p>A. The department may enter into an agreement with an applicant to establish mitigation ratios to compensate for the adverse impacts to wetlands of the applicant's development proposals that differ from the ratios required by K.C.C. 21A.24.340.B. The agreement shall require that the applicant:</p> <ol style="list-style-type: none"><li>1. Demonstrate with scientifically-valid data that the program implemented by the applicant has achieved long-term success in reducing the risk of failure and temporal loss of function of the applicant's wetland mitigation projects; and</li><li>2. Implement a scientifically rigorous mitigation, monitoring and adaptive management program that includes the following elements:<ol style="list-style-type: none"><li>a. a mitigation planning process that requires mitigation plans to be prepared and signed by a qualified wetland specialist. The mitigation planning process shall use the guidelines contained in Washington State Department of Ecology - U.S. Army Corps of Engineers Publication 04-06-013b "Guidance on Wetland Mitigation in Washington State" or an alternative approach acceptable to the department;</li><li>b. construction oversight by a qualified wetland specialist;</li><li>c. postconstruction monitoring and reporting by experienced and qualified personnel using scientifically rigorous and accepted methodologies to assess whether the mitigation has been installed and whether it meets the approved goals, objectives and performance standards identified in the mitigation plan;</li><li>d. ongoing mitigation site maintenance to facilitate the achievement of the approved goals, objectives and performance standards identified in the mitigation plan. Maintenance includes, but not limited to, the removal and control of nonnative vegetation, replacement of dead or dying planted vegetation and trash and debris removal;</li><li>e. financing or funding guarantees for the duration of the mitigation and monitoring program. At a minimum, funding guarantees must be in place until mitigation activities have met the established performance standards and have been approved by the department; and</li><li>f. an adaptive management program that requires the evaluation and adjustment of remedial actions contained within the contingency plan developed as part of the mitigation planning process.</li></ol></li></ol> <p>B. The mitigation ratios established by the agreement authorized by this section shall be based on data prepared by the applicant regarding the effectiveness of past and ongoing mitigation projects implemented and monitored by the applicant. In establishing the mitigation ratios, the department shall consider:</p> <ol style="list-style-type: none"><li>1. The applicant's demonstrated success in meeting mitigation performance standards for the different types of mitigation, such as re-establishment, creation, rehabilitation, and enhancement; and</li><li>2. The hydrogeomorphic classification, such as slope, riverine, depressional and tidal fringe, of the wetland.</li></ol> <p>C. The applicant may request coordinated review of the agreement with the Washington state Department of Ecology and the United States Army Corps of Engineers. (Ord. 15051 § 189, 2004).</p> | <p>Repealed.</p>                                                                 | <p>During BAS wetland review, it was determined that the requirements of this section did not meet no net loss requirements.</p> | <p><i>Section Notes:</i></p> <ul style="list-style-type: none"><li>• When unavoidable impacts occur in wetlands or their buffers, mitigation is required to compensate for impacts. This mitigation is specified in K.C.C. 21A.24.340, where ratios for identified by type of wetland impacted and type of mitigation proposed.</li><li>• This code section would have allowed reductions to the ratios in K.C.C. 21A.24.340 based on the criteria listed here, but the PO proposes repeal of this language.</li><li>• Executive staff indicated that this provision applies to mitigation within banks or the mitigation reserves program and was replaced with more specific code language in the relevant code sections.</li><li>• The County takes a moderate-risk approach to wetlands and their buffers. Under the County's <a href="#">BAS report</a> and Ecology's guidance, minimum mitigation ratios established in K.C.C. 21A.24.340 should not be further reduced to avoid no net loss.</li></ul> <p><i>Policy Analysis:</i></p> <ul style="list-style-type: none"><li>• No issues identified.</li></ul> |
| <b>AQUATIC AREAS AND RIPARIAN AREAS</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |                                                                                  |                                                                                                                                  |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| <p><b>K.C.C. 21A.06.072C - Defines "Aquatic areas"</b></p> <p><u>SECTION 9.</u> Ordinance 15051, Section 7, as amended, and K.C.C. 21A.06.072C are hereby amended to read as follows:</p> <p>A. Aquatic areas:</p> <ol style="list-style-type: none"><li>1. Nonwetland water features including: all shorelines of the state, rivers, streams, marine waters, and bodies of open water, such as lakes, ponds, and reservoirs;</li><li>2. <b>Impoundments</b>, such as reservoirs or ponds, if any portion of the contributing water is from a nonwetland water feature listed in subsection A.1. of this section; <del>((and))</del></li><li>3. Above-ground open water conveyance systems, such as ditches, if any portion of the contributing water is:<ol style="list-style-type: none"><li>a. <u>used by fish; or</u></li><li>b. from either a wetland or a <del>((nonwetland))</del> water feature listed in subsection A.1. or A.2. of this section, or both; <u>and</u></li></ol></li><li>4. <u>Portions of the water features in subsections A.1, A.2, and A.3 of this section that are conveyed underground in pipes or culverts.</u></li></ol> <p>B. "Aquatic areas" does not include water features where the source of contributing water is entirely artificial, including, but not limited to, ground water wells, <u>and any irrigation delivery systems, irrigation infrastructure, irrigation canals, or drainage ditches that lie within the boundaries of, and are maintained by a port district or an irrigation district or company.</u></p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | <p>Clarifies what is included in the definition, which includes piped areas.</p> | <p>Clarifies that aquatic areas do not cease to be jurisdictional where they are diverted underground.</p>                       | <ul style="list-style-type: none"><li>• Council may wish to streamline this definition for improved clarity. An option could be:<br/>"Aquatic areas include:<ol style="list-style-type: none"><li>1. Water features, such as shorelines of the state, rivers, streams, marine waters, lakes, ponds, and other bodies of open water;</li><li>2. Impoundments, which includes bodies of water collected in a reservoirs, dams, or through natural disturbance events, if any portion of the contributing water is from a nonwetland water;</li><li>3. Aboveground or open water conveyance system, such as ditches, if any portion of the contributing water is used by fish, from a wetland, water feature, or impoundment; and</li></ol></li></ul>                                                                                                                                                                                                                                                                                                                                                                   |

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |                                                                                                                      |                                                                                                                                                            | <p>4. Any portion of water in subsection A.1, A.2., or A.3. of this section that are conveyed in pipes or culverts.”</p> <ul style="list-style-type: none"><li>• Council may wish to repeal the definition of “impoundment” (“a body of water collected in a reservoir, pond or dam or collected as a consequence of natural disturbance events”) and include the description in this definition. “Impoundment” is used differently elsewhere in the code to refer to livestock manure facilities and animal control.</li></ul>                                                                                                  |
| <p><b>NOT INCLUDED IN PROPOSED ORDINANCE</b></p> <p><b>K.C.C. 21A.06.578 Habitat, fish.</b></p> <p>Habitat, fish: habitat that is used by anadromous or resident salmonids at any life stage at any time of the year including potential habitat likely to be used by anadromous or resident salmonids. "Fish habitat" includes habitat that is upstream of, or landward of, human-made barriers that could be accessible to, and could be used by, fish upon removal of the barriers. This includes off-channel habitat, flood refuges, tidal flats, tidal channels, streams and wetlands.</p> | Not included in proposed ordinance                                                                                   | Not included in proposed ordinance                                                                                                                         | <ul style="list-style-type: none"><li>• This definition of fish habitat narrowly applies to habitat used by salmonids, rather than to all species of fish. Because “fish habitat” is used in typing aquatic areas, follows the state’s system (see discussion on page 72), this definition should be made consistent with the state’s. Executive staff indicate that the intent was to apply this definition to all fish species and that this was inadvertently omitted from the proposed ordinance. Council may wish to revise this definition to reflect the Executive’s intent.</li></ul>                                    |
| <p><b>K.C.C. 21A.06.XXX - New Section</b></p> <p><u>NEW SECTION. SECTION 29.</u> There is hereby added to K.C.C. chapter 21A.06 a new section to read as follows:</p> <p>Riparian area: a designated area contiguous to an aquatic area that provides fish and wildlife habitat, protects adjacent aquatic fish and wildlife species and habitat, and protects water quality. Riparian areas reduce impacts from adjacent land uses through various physical, chemical, or biological processes.</p>                                                                                            | Adds definition for “Riparian area.”                                                                                 | Added to define areas previously called aquatic area buffers; this term was updated to reflect the terminology recommended by guidance document from WDFW. | <p><i>Section Notes:</i></p> <ul style="list-style-type: none"><li>• “Riparian area” replaces “aquatic area buffer” throughout the code. Executive staff indicated that this because these areas also provide important functions and habitat, not just as a buffer to protect aquatic areas.</li></ul> <p><i>Policy Analysis:</i></p> <ul style="list-style-type: none"><li>• Council may wish to make the purpose of riparian areas consistent with the purpose in the “buffer” definition (“intended to protect the functions and values of aquatic areas through ... and reduce impacts from adjacent land uses”).</li></ul> |
| <p><b>K.C.C. 21A.06.1015 - Defines "Salmonid"</b></p> <p><u>SECTION 30.</u> Ordinance 10870, Section 243, as amended, and K.C.C. 21A.06.1015 are hereby amended to read as follows:</p> <p>Salmonid: a fish native to the Puget Sound region that is a member of the fish family Salmonidae, including((, but not limited to)):</p> <p>A. Chinook, coho, chum, sockeye, and pink salmon;</p> <p>B. Rainbow, steelhead, and cutthroat ((salmon, which are also known as)) trout;</p>                                                                                                             | Clarifies that salmonids are fish native to the Puget Sound region, and updates the list of salmonid species listed. | Clarifies how to determine what "native" salmonids are by listing the applicable geography (i.e. the Puget Sound region). The specific species             | <p><i>Policy Analysis:</i></p> <ul style="list-style-type: none"><li>• No issues identified.</li></ul>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |

| Code                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | Executive’s Proposed Change                                                                                                                                                                                                                                                                            | Executive’s Intent/Rationale                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | Policy Staff Comments                                                                                                                                                                                                                                                             |

|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <p>2. Type F waters include all segments of aquatic areas that are not type S waters and that contain fish or fish habitat, including waters diverted for use by a federal, state, or tribal fish hatchery from the point of diversion for one-thousand-five-hundred feet or the entire tributary if the tributary is highly significant for protection of downstream water quality((÷)). Type F waters, which may be ephemeral, may be classified by:</p> <p>a. the presence of fish;</p> <p>b. a stream segment with a defined channel of two feet or greater bank full width and a gradient less than twenty percent; or</p> <p>c. any stream located within the floodplain of type S or F water.</p> <p>3. Type N waters include all segments of aquatic areas that are not type S or F waters and that are physically connected to type S or F waters by ((an above-ground)) a channel or piped system, stream, or wetland; and</p> <p>4. Type O waters include all segments of aquatic areas that are not type S, F, or N waters and that are not physically connected to type S, F, or N waters by a((n above-ground)) channel or piped system, ((pipe or culvert,)) stream, or wetland, and which infiltrate water into the ground.</p> <p>B. For the purposes of the water types in subsection A. of this section, ((an above-ground)) a channel system is ((considered to be)) present if the ((one-hundred-year)) floodplains of both the contributing and receiving waters are connected.</p> <p>((C. The department may determine that an area upstream of a legal human-made barrier is not fish habitat considering the following factors:</p> <p>1. The human-made barrier is located beneath public infrastructure that is unlikely to be replaced and it is not feasible to remove the barrier without removing the public infrastructure;</p> <p>2. The human-made barrier is in the Urban Growth Area established by the King County Comprehensive Plan and is located beneath one or more dwelling units and it is not feasible to remove the barrier without removing the dwelling unit;</p> <p>3. The human-made barrier is located in a subbasin that is not designated "high" on the Basin and Shoreline Conditions Map which is included as Attachment A to Ordinance 15051; or</p> <p>4. The human-made barrier is not identified for removal by a public agency or in an adopted watershed plan.))</p> | <p>system for type N waters.</p> <p>(3) Removes subsection "C" regarding "human made barriers."</p> <p>(4) Technical corrections.</p> | <p>(2) For Type N waters, the 'above ground' part of the definition previously caused confusion among applicants, who would be led to think that if the channel were in a culvert (which is underground) that it wouldn't qualify as a type N. This was not the intent of the definition. Thus the 'above ground' part is proposed for deletion as it didn't help and clarified that type N can be piped.</p> <p>(3) This language was out of date. It did not match how the co-managers (WDFW and Indian Tribes) interpret fish habitat or state level fish passage requirements. The language does not match BAS as to what is fish habitat and is instead based on a financial rationale as a reason to not do something. In addition, it does not match the County's fish passage program classification of fish habitat.</p> <p>(4) Correcting formatting and grammatical errors.</p> | <p><i>Policy Analysis:</i></p> <ul style="list-style-type: none"><li>• The <a href="#">state classification</a> for Type F water include <b>this criterion along with other criteria</b> that are not included in this description. Council may wish to make the criteria consistent with the state's, which includes:<ul style="list-style-type: none"><li>○ Lakes, ponds, or impoundments with a surface area of 0.5 acres or greater at seasonal low water</li><li>○ Water diverted for use by more than 10 residential or camping units or a public accommodation facility serving more than 10 people</li><li>○ Water in a campground with more than 10 camping units</li><li>○ Riverine ponds, wall-based channels, and other channel features used by fish for off-channel habitat</li></ul></li><li>• For Type F waters, the <b>proposed changes shown in yellow</b> align with the state's classification. The changes would mean that waters that meet certain dimensional characteristics (width and gradient) are assumed to have potential fish presence and be designated as such. The presence of upstream fish passage barriers would no longer disqualify a stream from being classified as a Type F water.</li><li>• The <b>Type N and Type O waters</b> deviate from the State's definitions, which uses Np and Ns and a different set of criteria. The County's <a href="#">BAS report</a> references state guidance but does not address that the County and state use different systems for lower typed aquatic areas. It is not clear how the state's system of water typing and guidance would translate to these specific types. It may be clearer to use the state's terminology.</li></ul> |

| Code | <p><b>K.C.C. 21A.24.358 - Riparian areas measurement methods and process.</b></p> <p>SECTION 73. Ordinance 15051, Section 193, as amended, and K.C.C. 21A.24.358 are hereby amended to read as follows:</p> <p>A. <del>((Aquatic area buffers))</del> <b>Riparian areas</b> shall be measured as follows:</p> <p>1. From the ordinary high water mark <u>of the adjacent aquatic area</u>, or from the top of bank if the ordinary high water mark cannot be identified;</p> <p>2. If the <u>adjacent aquatic area</u> is located within a mapped severe channel migration <u>hazard area</u>, the <del>((aquatic area buffer))</del> <b>riparian area</b> width shall be <del>((the greater of the aquatic area buffer width as))</del> measured <del>((consistent with subsection A.1. of this section or))</del> <b>from the outer edge of the severe channel migration hazard area; (and)</b></p> <p>3. If the <del>((aquatic area buffer))</del> <b>riparian area</b> includes a steep slope hazard area or a landslide hazard area, the <del>((aquatic area buffer))</del> <b>riparian area</b> width is the greater of <del>((either))</del></p> <p>a. the <del>((aquatic area buffer))</del> <b>riparian area width</b> as required in this section <del>((or the top of the hazard area)); or</del></p> <p>b. the riparian area width as required in this section, extended upslope towards the top of the landslide or steep slope hazard area, as measured perpendicular to topographic contours, <b>up to a maximum total width of twice the riparian area width otherwise required;</b></p> <p>4. If the adjacent aquatic area is located within an alluvial fan, the riparian area width is the greater of:</p> <p>a. the riparian area width as defined in this section; or</p> <p>b. the extent of the alluvial fan hazard area; and</p> <p>5. If the adjacent aquatic area is conveyed underground, the riparian area width is measured only from the above-ground portion of the aquatic area. This riparian area extends in all directions from the point at which the aquatic area enters or exits the underground conveyance system.</p> <p>B. <del>Within the ((U))urban ((G))growth ((A))area, ((aquatic area buffers))</del> <b>riparian area widths</b> shall be as follows:</p> <p><del>((1. A type S or F aquatic area buffer is one hundred fifteen feet;</del></p> <p>2. <b>A type S or F aquatic area buffer in a basin or shoreline designated as "high" on the Basin and Shoreline Conditions Map is one hundred sixty five feet;</b></p> <p>3. <b>A type N aquatic area buffer is sixty five feet; and</b></p> <p>4. <b>A type O aquatic area buffer is twenty five feet.))</b></p> <table><tr><th><u>Adjacent Aquatic Area Type</u></th><th><u>Riparian Area Width</u></th></tr><tr><td>S or F in basin or shoreline designated as "high" on the Basin and Shoreline Conditions map</td><td>200 feet</td></tr><tr><td>All other S or F</td><td>180 feet</td></tr><tr><td>N</td><td>100 feet</td></tr><tr><td>O</td><td>50 feet</td></tr></table> <p>C. <del>Outside the ((U))urban ((G))growth ((A))area, ((aquatic area buffers))</del> <b>riparian areas</b> shall be as follows:</p> <p><del>((1. A type S or F aquatic area buffer is one hundred sixty five feet;</del></p> <p>2. <b>A type N aquatic area buffer is sixty five feet; and</b></p> <p>3. <b>A type O aquatic area buffer is twenty five feet.))</b></p> <table><tr><th><u>Adjacent Aquatic Area Type</u></th><th><u>Riparian Area Width</u></th></tr><tr><td>S or F</td><td>200 feet</td></tr><tr><td>N</td><td>100 feet</td></tr><tr><td>O</td><td>50 feet</td></tr></table> <p>D. <del>((Within the Bear Creek drainage basin a type N aquatic area buffer in a designated regionally significant resource area is one hundred feet.</del></p> <p>E-)) <b>The department may approve a modification of ((buffer widths if)) a riparian area width required by this section by averaging the riparian area width, if the resulting riparian area meets the following standards:</b></p> <p>1.<del>((a. The department determines that through buffer averaging the ecological structure and function of the resulting buffer is equivalent to or greater than the structure and function before averaging and meets the following standards:</del></p> <p>(1) the total area of the buffer is not reduced;</p> <p>(2) the buffer area is contiguous; and</p> | <u>Adjacent Aquatic Area Type</u> | <u>Riparian Area Width</u>   | S or F in basin or shoreline designated as "high" on the Basin and Shoreline Conditions map | 200 feet | All other S or F | 180 feet | N | 100 feet | O | 50 feet | <u>Adjacent Aquatic Area Type</u> | <u>Riparian Area Width</u> | S or F | 200 feet | N | 100 feet | O | 50 feet | <p>(1) Changes references to "aquatic area buffers" to "riparian areas."</p> <p>(2) Clarifies that riparian areas are measured from the ordinary high water mark of the adjacent aquatic area.</p> <p>(3) Updated to provide Channel Migration Zones with riparian area coverage for extended protection as a critical area.</p> <p>(4) Clarifies method of measurement of riparian areas in steep slope and landslide hazard areas.</p> <p>(5) Limits the riparian area size when the buffer includes landslide or steep slope hazard areas.</p> <p>(6) Clarifies that a riparian area from an aquatic area outside of the fan doesn't extend all the way across the fan.</p> <p>(7) Clarifies that aquatic area jurisdiction doesn't end where it goes underground, and that the riparian areas are not only measured from above-ground portions but also extend all the way around the pipe</p> | <p>(1) Changes are proposed throughout the code to change term or reference to "aquatic area buffers" to "riparian areas," where appropriate, consistent with current terminology.</p> <p>(2) Since the term "aquatic area buffer" is being changed to "riparian area," this language is being added clarify how and where riparian areas are measured in relation to aquatic areas.</p> <p>(3) This provides clarification, as prior language could be read two different ways. The code now matches 2004 BAS documentation and intent as well as more closely aligns with current riparian BAS.</p> <p>(4) Resolves the potential issue of having an extremely large extended riparian area where an aquatic area was below a large slope, which would trigger the need for a critical areas alteration exception. This would add a great deal of</p> | <p><i>Section Notes:</i></p> <ul style="list-style-type: none"><li>Under this Proposed Ordinance, “aquatic area buffers” are replaced with “riparian areas”. Executive staff indicated that this because these areas also provide important functions and habitat, not just as a buffer to protect aquatic areas.</li><li>This section establishes the riparian area widths based on the adjacent aquatic area and location inside or outside the UGA.</li></ul> <p><i>Policy Analysis:</i></p> <ul style="list-style-type: none"><li>Under the existing code, it is unclear whether the riparian area would 1) <i>end</i> at the outer edge of the severe channel migration hazard area, or whether 2) it would be measured <i>beginning</i> from the outer edge of the severe channel migration hazard area. The <a href="#">BAS report</a> indicates that DLS currently measures it under the first option; however, it appears that the original 2004 BAS intended it to be measured using the second option. The proposed changes would clarify this to state that the riparian area would be measured beginning from the outer edge of the severe channel migration hazard area. This would have the effect of increasing the riparian area in areas where there are severe channel migration hazard areas. The BAS report indicates that riparian areas should be measured <i>starting from the outside edge of all channel migration zones</i>, which would include both the severe and moderate areas, to comply with BAS (pages 103-104). The proposed changes would depart from BAS: “Because most of King County’s mapped CMZs have wide severe CMZ hazard areas and relatively narrower moderate CMZ hazard areas, the overall risk of not extending riparian-area protections to the moderate CMZ hazard area is low within the near-to-moderate time frames” (page 108) and “In the long term, there is high confidence that there is moderate risk that riparian areas adjacent to migrating channels will not be fully protected” (page</li></ul> |
| <u>Adjacent Aquatic Area Type</u>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | <u>Riparian Area Width</u>        |                              |                                                                                             |          |                  |          |   |          |   |         |                                   |                            |        |          |   |          |   |         | | <p>(3) averaging does not result in the reduction of the minimum buffer for the buffer area waterward of the top of the associated steep slopes or for a severe channel migration hazard area;</p> <p>b. the applicant demonstrates that the buffer cannot provide certain functions because of soils, geology or topography, in which case the department shall establish a buffers width that protects the remaining ecological functions that the buffer can provide;</p> <p>e. the site is zoned RA and is subject to an approved rural stewardship plan. In modifying the buffers, the department shall consider factors such as, the basin and shoreline condition, the location of the site within the basin and shoreline, the buffer condition and the amount of clearing;</p> <p>d. a legally established roadway transects an aquatic area buffer, the roadway edge closest to aquatic area shall be the extent of the buffer, if the part of the buffer on the other side of the roadway provides insignificant biological or hydrological function in relation to the portion of the buffer adjacent to the aquatic area; or</p> <p>e. the aquatic area is created or its type is changed as a result of enhancement or restoration projects that are not mitigation for a development proposal or alteration; and</p> <p>2. If the site is located within the shoreline jurisdiction, that no net loss of shoreline ecological functions will result when considering projects that combine reduced buffers and habitat restoration.)) <u>The total land area amount of the riparian area after averaging is equivalent to or greater than the total land area amount of the riparian area before averaging;</u></p> <p>2. The additional riparian area is contiguous with the standard riparian area;</p> <p>3. The riparian area at its narrowest point is never less than seventy-five percent of the standard required width;</p> <p>4. The width of the riparian area is increased adjacent to the higher functioning habitat or more sensitive portion of the adjacent aquatic area, and decreased adjacent to the lower functioning or less sensitive portion, as demonstrated by an ecological critical area report from an ecological professional;</p> <p>5. No net loss of riparian area or adjacent aquatic area functions and values will occur as a result of the averaging, as demonstrated by an ecological critical area report from an ecological professional;</p> <p>6. Where the riparian area includes a steep slope, landslide, or alluvial fan hazard area, the width of the riparian area is not reduced waterward of the extent of the hazard areas;</p> <p>7. If the site is located within the shoreline jurisdiction, no net loss of shoreline ecological functions will result; and</p> <p>8. Riparian area averaging cannot be combined with any other riparian area width modifications.</p> | <p>entrance, not just laterally.</p> <p>(8) Converts aquatic area type and corresponding riparian area width to a table.</p> <p>(9) Updates riparian area widths for applicable aquatic area types inside and outside the Urban Growth Area.</p> <p>(10) Removes specific reference to Bear Creek drainage basin.</p> <p>(11) Added analogous riparian area averaging section.</p> <p>(12) Clarifies how riparian area averaging must be implemented spatially.</p> | <p>process without improving environmental outcomes. This change removes potential procedural hurdles for areas distant from riparian areas while maintaining ecological protection.</p> <p>(5) This resolves the potential problem of having a riparian area that is located below a large slope having an extremely large extended buffer, consistent with management direction. Also see K.C.C. 21A.24.325.</p> <p>(6) This is informed by BAS review for alluvial fans, to establish development standards including requirements for overlapping critical area buffers. New conditions on AFHAs are proposed to be added to enable new regulation to protect public health and safety as required by WAC 365-196-830.</p> <p>(7) These changes bring the code into alignment with current practice.</p> <p>(8) Converted to a table for ease of use by</p> | <p>108). The County employs nonregulatory measures “that offer protections to riparian areas and aquatic areas” that “reduce and mitigate the various risks,” discussed on page 98 of the BAS report. A summary of nonregulatory measures is at the end of this matrix. Councilmembers may wish to consider the proposed riparian area widths, risks of riparian area protections, and meeting other GMA priorities.</p> <ul style="list-style-type: none"><li>• The previous code did not have an upper limit of the buffer width associated with steep slopes, which could lead to wide buffers that are hundreds or thousands of feet long. Executive staff indicate that slopes provide large wood and sediment to wetlands and aquatic areas, most frequently through small slope instability, rather than large infrequent events, meaning that the ecological benefit is diminished over longer distances. The buffer width limit is a policy choice.</li><li>• The State’s guidance for riparian widths focuses on estimating 200-year site potential tree height (SPTH), which is the average maximum height of the tallest dominate tree species 200 years or older in a given area. Different riparian area segments may have different tree species, leading to variation in SPTH across the county. The County’s BAS report (page 78) analyzes widths and SPTH for King County. The report indicates that 84% of stream miles in unincorporated King County have a SPTH between 180 and 215 feet. Although the BAS indicates that there are several variables that factor into widths, a riparian width of 200 feet was determined in the report to be representative. Guidance from WDFW indicates that a minimum width of at least 100 feet, which provides a majority of pollution removal and water quality benefits.</li></ul> |

| Code | Executive's Proposed Change | Executive's Intent/Rationale                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | Policy Staff Comments                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
|------|-----------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|      |                             | <p>applicants and reviewers.</p> <p>(9) The proposed riparian area widths are based on the Best Available Science (BAS) together with policy direction to fulfill the GMA goal that development be encouraged in urban areas. BAS recommends that riparian area widths be based on the average maximum height of the tallest dominant trees that are 200 years or more in age. While trees of this age range in height, depending on the tree species, BAS review determined 200 feet to be a suitable width for riparian area protections.</p> <p>(10) Now that the riparian area width is proposed to be 100 feet for all Type N aquatic areas, this standard specifying a 100-foot buffer for the Bear Creek drainage basin is redundant.</p> <p>(11) Added to preserve the flexibility provided in existing code that allows aquatic area buffer averaging.</p> | <p>The BAS report indicates that designating widths by aquatic area types may no longer be appropriate, as both non-fish-bearing and fish-bearing streams can support unique communities of wildlife and ecosystem functions.</p> <p>Executive staff indicate that the County's existing system of designating riparian area widths by adjacent aquatic area and its location inside or outside the UGA was intended to meet environmental protection and other GMA considerations. Approximately 2% of the 5,500 stream miles in unincorporated King County are inside the UGA, 74% are in a Forest Production District, and 24% are in the remaining Rural Area.</p> <p>The riparian area width for each stream type is increased, with Type S and F riparian areas aligning with BAS. Type N and O riparian areas would be increased to 100 feet and 50 feet respectively, to support greater water quality and pollution removal. Type N riparian areas depart from BAS, as the science indicates that non-fish-bearing streams provide ecological functions that should be protected on the same degree as fish-bearing streams. Type O riparian areas depart from the BAS, as the science indicates that 100 feet is necessary to sufficiently support water quality and pollution removal benefits. Increased buffers may reduce housing capacity and development potential on properties. Using the riparian width system and increasing widths are policy choices.</p> <ul style="list-style-type: none"><li>Executive staff indicate that only a small portion of aquatic areas inside the UGA have basin or shoreline designated as "high" on the Basin and Shoreline Conditions Map. This distinction was made during the 2004 update and was intended to mitigate the risk of some smaller widths in urban areas by providing protection in higher quality</li></ul> |

With the widths increasing for all streams, maintaining a different width for these riparian areas is a policy choice.</p> <ul style="list-style-type: none"><li>• This language is no longer necessary, as the minimum buffer is now proposed at 100 feet for all Type N adjacent riparian areas. No issues identified with the proposed removal.</li><li>• Buffer averaging standards are proposed to be replaced – the major changes to these standards are shown in orange. Buffers can no longer be reduced on the basis of not providing certain functions, nor can they be reduced based on a rural stewardship plan, which is proposed to be repealed. The largest reduction is 25% and can only occur when the buffer is reduced in a lower functioning habitat and increased in a higher functioning habitat. Averaging cannot be used with other code reductions. These changes are consistent with Ecology's guidance. This is a policy choice.</li></ul> |
| <p><b>K.C.C. 21A.24.365 - Development standards for proposals and alterations for sites with aquatic areas and riparian areas present.</b></p> <p><u>SECTION 74.</u> Ordinance 15051, Section 195, as amended, and K.C.C. 21A.24.365 are hereby amended to read as follows:<br/>The following development standards apply to development proposals and alterations on sites containing aquatic areas or <del>((their buffers))</del> riparian areas:</p> <p>A. Unless allowed as an alteration exception under K.C.C. 21A.24.070, only the alterations identified in K.C.C. 21A.24.045 are allowed in aquatic areas and <del>((aquatic area buffers))</del> riparian areas;</p> <p>B. Grading for allowed alterations in <del>((aquatic area buffers))</del> riparian areas is only allowed from May 1 to October 1. This period may be modified when the department determines it is necessary along marine shorelines to protect critical forage fish and salmonid migration or as provided in K.C.C. 16.82.095;</p> <p>C. The moisture-holding capacity of the topsoil layer on all areas of the site not covered by impervious surfaces should be maintained by:</p> <p>1. Minimizing soil compaction, or</p> <p>2. Reestablishing natural soil structure and the capacity to infiltrate;</p> <p>D. New structures within a <del>((n aquatic area buffer))</del> riparian area should be sited to avoid the creation of future hazard trees and to minimize the impact on groundwater movement; <del>((and))</del></p> <p>E. To the maximum extent practical:</p> <p>1. The soil duff layer should not be disturbed, but if disturbed, should be redistributed to other areas of the project site where feasible;</p> <p>2. A spatial connection should be provided between vegetation within and outside the <del>((aquatic area buffer))</del> riparian area to prevent creation of wind throw hazards; and</p> <p>3. Hazard trees <del>((should be retained))</del> in <del>((aquatic area buffers))</del> riparian areas <del>((and))</del> should be either topped or pushed over toward the aquatic area, and not taken out of the riparian area; <del>((and))</del></p> | <p>(1) Changes references of "aquatic area buffers" to "riparian areas."</p> <p>(2) Clarifies that hazard trees that are topped or pushed over are not to be removed from riparian areas.</p> <p>(3) Allows use of climate-smart plants for revegetation where native vegetation is allowed.</p> <p>(4) Updates term "woody debris" to "large wood."</p> | <p>(1) Changes are proposed throughout the code to change term or reference of "aquatic area buffers" to "riparian areas," where appropriate, consistent with current terminology.</p> <p>(2) Keeping large wood in riparian areas is consistent with BAS and supports ecological function.</p> <p>(3) Allowing the use of climate-smart plants for site restoration and mitigation encourages the</p> | <p><i>Section Notes:</i></p> <ul style="list-style-type: none"><li>• This section addresses specific construction/alteration standards for aquatic areas and riparian areas.</li></ul> <p><i>Policy Analysis:</i></p> <ul style="list-style-type: none"><li>• Work periods may be modified under the grading code in K.C.C. 16.82.095 for any shoreline, rather than just marine shorelines. Council may wish to revise this section for clarity.</li><li>• The code includes provisions for removing hazard trees, including topping or pushing over the tree towards an aquatic area. Although there are provisions to protect vegetation and limit clearing in other portions of the code, the code could also support keeping large wood in riparian areas when removal of nonhazardous trees is proposed as well as minimizing vegetation disturbance. This is a policy choice.</li></ul>                                                                                      |

| Code | <p>F. <u>Mitigation or restoration projects may include climate-smart plants approved by King County, but shall not otherwise introduce any plant or wildlife that is not indigenous to the Puget Sound lowland into an aquatic area or riparian area unless authorized by state or federal approval; and</u></p> <p>G. If a restoration, enhancement, or mitigation project proposes to place large <u>wood</u> (<del>woody debris</del>) waterward of the ordinary high water mark of a <del>((F))</del> type S aquatic area, the applicant shall consider the potential for recreational hazards in project design.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |                                                                                                                                                                                                                                                      | <p>long-term success of these projects.</p> <p>(4) Changes are proposed throughout the code to change term or reference to "woody debris" to "large wood," where appropriate, consistent with current terminology.</p>                                                                                                                                                                                                                    | <ul style="list-style-type: none"><li>This section could be clarified, as prioritizing native vegetation in the <i>Puget Sound region</i>. Climate-smart plants are broader than those in the Puget Sound lowland.</li></ul>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
| <p><b>K.C.C. 21A.24.380 - Riparian area mitigation ratios.</b></p> <p>SECTION 75. Ordinance 10870, Section 485, as amended, and K.C.C. 21A.24.380 are hereby amended to read as follows:</p> <p>In addition to the requirements in (<del>(K.C.C. 21A.24.130, 21A.24.125 and 21A.24.133))</del> <u>this chapter</u>, the following applies to mitigation to compensate for the adverse impacts associated with an alteration to an aquatic area or (<del>(aquatic area buffer))</del> <u>riparian area</u>:</p> <p>A. Mitigation measures (<del>((must))</del>) <u>shall</u> achieve equivalent or greater aquatic <u>or riparian</u> area functions <u>than prealteration conditions</u> including, but not limited to:</p> <ol style="list-style-type: none"><li>Habitat complexity, connectivity, and other biological, and ecological functions;</li><li>Seasonal hydrological dynamics(<del>(s))</del>) <u>and</u> water storage capacity (<del>(and water quality))</del>; (<del>and</del>)</li><li>(<del>(Geomorphic and habitat processes and functions))</del>) <u>Shade and temperature control, pollution removal, water purification, and other water quality functions; and</u></li><li><u>Natural erosion and sediment delivery, nutrient and detritus delivery, natural bank stabilization, sources and recruitment of large wood, cover for aquatic and terrestrial animals, terrestrial-based aquatic prey resources, and other geomorphic and habitat processes and functions;</u></li></ol> <p>B. To the maximum extent practical, permanent (<del>((alterations))</del>) <u>impacts</u> that require <u>mitigation such as</u> restoration or enhancement of the altered aquatic area(<del>(- aquatic area buffer))</del> <u>or riparian area</u>, or another aquatic area or (<del>(aquatic area buffer must consider))</del> <u>riparian area, shall document in a mitigation plan how the following design factors(<del>(s))</del>) have been considered</u> as applicable to the function being mitigated:</p> <ol style="list-style-type: none"><li>The natural channel or shoreline reach dimensions including its depth, width, length, and gradient;</li><li>The horizontal alignment and sinuosity;</li><li>The channel bed, <u>marine intertidal area</u>, sea bed, or lake bottom with identical or similar substrate and similar erosion and sediment transport dynamics;</li><li>Bank (<del>(and buffer))</del>) configuration and erosion and sedimentation rates; (<del>and</del>)</li><li>Similar <u>native vegetation or climate-smart plant</u> species diversity, size, and densities in the (<del>(channel, sea bed or lake bottom and on the))</del>) <u>adjacent riparian ((bank or buffer)) area with similar configuration, spatial arrangement, and solar aspect;</u></li><li>Similar slope and elevation; and</li><li>Similar soil conditions, including moisture, saturation, and organic content;</li></ol> <p>C. Mitigation to compensate for adverse impacts <u>to aquatic areas</u> shall meet the following standards:</p> <ol style="list-style-type: none"><li>Not <u>located</u> upstream of a barrier to fish passage; <u>and</u></li><li>(<del>(Is equal or greater in biological function; and</del> 3-)) To the maximum extent practical is:<ol style="list-style-type: none"><li>located on the site of the alteration or within one-half mile of the site and in the same aquatic area reach at a (<del>((1:1))</del>) <u>2:1 ratio of area of mitigation to area of ((alteration)) impact</u>; or</li><li>(<del>(4- Is))</del> <u>b. if unable to be located on the site or within one-half mile of the site, located in the same aquatic area drainage subbasin or marine shoreline and attains the following ratios of area of functional mitigation to area of ((alteration)) impact:</u><ol style="list-style-type: none"><li>(<del>(a-))</del> (1) <u>a 3:1 ratio for a type S or F aquatic area; and</u></li><li>(<del>(b-))</del> (2) <u>a 2:1 ratio for a type N or O aquatic area;</u></li></ol></li></ol></li></ol> | <p>(1) Replaces “geomorphic and habitat processes and functions” with specific examples and adds other clarifying wording changes.</p> <p>(2) Adds provision to allow alternatives to on-site riparian area mitigation under certain conditions.</p> | <p>(1) Clarifies existing intent by using more accessible language.</p> <p>(2) Provides flexibility in achieving riparian area compensatory mitigation requirements by providing reduced area-based ratios paired with required primary or secondary actions. The additional actions help to offset the lower area-based mitigation requirements since the actions are known to directly benefit riparian and aquatic area functions.</p> | <p>Section Notes:</p> <ul style="list-style-type: none"><li>The County’s <a href="#">BAS report</a> indicates the use of mitigation to achieve no net loss generally comes with a high risk of failure, and that the changes proposed are supported by BAS. The report states “Previous King County riparian-area mitigation ratios do not align with BAS because they do not account for temporal loss and uncertainty in mitigation success (risk of failure). King County’s updates for riparian-area mitigation ratios are in better alignment with BAS because they are within the range of mitigation ratios in BAS that account for replacement of lost or impacted area, temporal loss, and uncertainty in mitigation success. Increasing riparian-area mitigation ratios will help support mitigation success in achieving equivalent or greater functions. Additionally, having different mitigation ratios based on aquatic-area types helps to align mitigation with expected functions likely achieved for each aquatic-area type” (page 115)</li></ul> <p>Policy Analysis:</p> <ul style="list-style-type: none"><li>This subsection could be clarified to be comparable to nearby relatively undisturbed areas for degraded areas.</li><li>On-site mitigation is proposed to increase from 1:1 to 2:1. Mitigation should have a ratio higher than 1:1 (discussed above), with BAS indicating that ratios below 3:1 are considered to be generally inadequate to</li></ul> |

| <p>D. For purposes of subsection C. of this section, ((a)) mitigation ((measure)) is in the same aquatic area reach if the length of aquatic area ((shoreline)) or adjacent riparian area meets the following criteria:</p> <p>1. Similar geomorphic conditions including slope, soil, aspect, and substrate;</p> <p>2. Similar processes including erosion and transport of sediment and ((woody debris)) large wood;</p> <p>3. Equivalent or better biological conditions, including presence of and habitat for invertebrates, fish, wildlife, and vegetation;</p> <p>and</p> <p>4. Equivalent or better biological functions, including fish and wildlife mating, reproduction, rearing, migration, and refuge;</p> <p>((or)) and</p> <p>5. For tributary streams, a distance of no more than one-half mile from the main stem;</p> <p>E.1. ((The department may reduce the mitigation ratios in subsection C. of this section to 2:1 ratio for a type S or F aquatic area and 1.5:1 ratio for a type N or O aquatic area if the applicant provides a scientifically rigorous mitigation monitoring program that includes the following elements:</p> <p>1. Monitoring methods that ensure that the mitigation meets the approved performance standards identified by the department;</p> <p>2. Financing or funding guarantees for the duration of the monitoring program; and</p> <p>3. Experienced, qualified staff to perform the monitoring)) On-site mitigation in riparian areas shall use the ratios in subsection E.2. of this section, unless the department establishes an alternative mitigation ratio with supplemental actions in accordance with subsection F. of this section;</p> <p>2. Ratios of area of mitigation to area of impact for on-site mitigation for riparian areas:</p> <table><tr><th>Adjacent Aquatic Area Type</th><th>On-site Compensatory Mitigation Ratio</th></tr><tr><td>Shoreline (S)</td><td>3:1</td></tr><tr><td>Fish bearing(F)</td><td>3:1</td></tr><tr><td>Non-fish bearing (N)</td><td>3:1</td></tr><tr><td>Other (O)</td><td>2:1</td></tr></table> <p>F.1. The department may approve an alternative on-site area mitigation ratio to subsection E. of this section when the following requirements of subsection F.2. of this section are met.</p> <p>2. Required actions for alternative on-site riparian area mitigation ratio based on the type of vegetation impacted:</p> <table><tr><th>Adjacent Aquatic Area Type</th><th>Impacts to Woody Vegetation</th><th>Impacts to Non-Woody Vegetation or unvegetated Areas</th></tr><tr><td>Shoreline (S)<br/>Fish bearing (F)<br/>Non-fish bearing (N)</td><td>2:1 ratio with at least one primary action or three secondary actions</td><td>1:1 ratio with at least two secondary actions</td></tr><tr><td>Other (O)</td><td>1:1 ratio with at least one primary action or two secondary actions</td><td>1:1 ratio with at least one secondary action</td></tr></table> <p>3. Primary actions:</p> <p>a. placing large wood in adjacent aquatic areas, if not associated with shoreline stabilization or flood protection facilities;</p> <p>b. removing a fish passage barrier, if not required by the development permit;</p> <p>c. removing an aquatic area transportation crossing, such as roads, bridges, or trails, and revegetating as appropriate. Utility crossings are not included under this action, unless the removal is part of an integrated transportation crossing removal project;</p> <p>d. removing shoreline armoring, revetments, or levees; or</p> <p>e. other similar actions as determined by the department.</p> <p>4. Secondary actions:</p> <p>a. planting native trees, climate-smart plants, and shrubs in areas of riparian area addition lacking native vegetation that are adjacent to and contiguous with existing riparian areas, within an area equal to one-half of the area of impact. This action cannot be applied where the riparian area addition requires enhancement to achieve equal function to the impact area;</p> <p>b. placing large wood in riparian areas or an adjacent floodplain;</p> <p>c. installing wildlife snags or similar wildlife nesting or rearing habitat;</p> <p>d. removing floodplain fill and replating with native vegetation or climate-smart plants as appropriate; or</p> <p>e. other similar actions as determined by the department;</p> | Adjacent Aquatic Area Type                                            | On-site Compensatory Mitigation Ratio                | Shoreline (S)         | 3:1 | Fish bearing(F) | 3:1 | Non-fish bearing (N) | 3:1 | Other (O) | 2:1 | Adjacent Aquatic Area Type | Impacts to Woody Vegetation | Impacts to Non-Woody Vegetation or unvegetated Areas | Shoreline (S)<br>Fish bearing (F)<br>Non-fish bearing (N) | 2:1 ratio with at least one primary action or three secondary actions | 1:1 ratio with at least two secondary actions | Other (O) | 1:1 ratio with at least one primary action or two secondary actions | 1:1 ratio with at least one secondary action |  |  | <p>support mitigation success (page 112). Council may wish to consider whether these ratios are appropriate.</p> <ul style="list-style-type: none"><li>With the proposed changes, off-site mitigation and on-site mitigation have the same ratios for Type N and Type O aquatic areas. This change may no longer incentivize applicants from completing mitigation on-site, which is typically preferred over off-site. The BAS report states “Higher off-site mitigation ratios than on-site ratios align with BAS because there is even greater uncertainty with off-site mitigation, as areas may or may not provide similar functions and conditions as on-site areas.” Council may wish to consider whether to increase these ratios consistent with BAS.</li><li>The proposed changes would no longer allow ratio reductions for off-site mitigation. Executive staff indicate that these existing provisions do not meet BAS and allows a net loss of ecological function. Removal of this reduction is a policy choice.</li><li>Riparian area mitigation ratios are increased from 1:1 to either 3:1 or 2:1. These mitigation ratios are higher than aquatic area mitigation ratios. Executive staff indicate that the ratios account for lost or impacted areas, the time lag between the impact and mitigation maturity, and uncertainty in mitigation success. Establishing higher baseline standards for riparian areas is a policy choice.</li><li>The proposed ordinance includes a new provision for alternative ratios based on the type of vegetation impacted. This system would lower the mitigation requirement by 33% to 66% of the standard with certain actions. The BAS report indicates that ratios below 3:1 alone are inadequate due to their risk of success and temporal lag. However, the BAS report indicates that “Including</li></ul> |

| <p>G.1. If unable to be located on or within one-half mile of the site, off-site mitigation for riparian areas in the same drainage subbasin, may be accepted by the department and shall be in a mitigation banking site, resource mitigation reserve, or conservation easement if on private property. Off-site mitigation shall use the ratios of area of mitigation to area of impact in subsection G.2. of this section.</p> <p>2. Off-site ratios of area of mitigation to area of impact of riparian areas:</p> <table><tr><th>Adjacent Aquatic Area Type</th><th>Off-Site Compensatory Mitigation Ratio</th></tr><tr><td>Shoreline (S)</td><td>4:1</td></tr><tr><td>Fish bearing (F)</td><td>4:1</td></tr><tr><td>Non-fish bearing (N)</td><td>4:1</td></tr><tr><td>Other (O)</td><td>3:1; and</td></tr></table> <p>H. For rectifying an illegal alteration to any type of aquatic area or ((its buffer)) riparian area, mitigation measures ((must meet the following standards)) shall:</p> <p>1. For an aquatic area, be ((L))located on the site of the illegal alteration at a ((4:1))4:1 ratio of area of mitigation to area of ((alteration)) impact; ((and))</p> <p>2. For a riparian area, be located on the site of the illegal alteration at a 4:1 ratio of area of mitigation to area of impact for adjacent type S, F, and N aquatic areas, and 3:1 ratio for adjacent type O aquatic areas; and</p> <p>3. To the maximum extent practical, replicates the natural prealteration configuration at its natural prealteration location including the factors in subsection B. of this section(;; and</p> <p>G. The department may modify the requirements in this section if the applicant demonstrates that, with respect to each aquatic area function, greater functions can be obtained in the affected hydrologic unit that the department may determine to be the drainage subbasin through alternative mitigation measures.</p> <p>H. For temporary alterations to an aquatic area or its buffer that is predominately woody vegetation, the department may require mitigation in addition to restoration of the altered aquatic area or buffer)).</p> | Adjacent Aquatic Area Type             | Off-Site Compensatory Mitigation Ratio | Shoreline (S)         | 4:1 | Fish bearing (F) | 4:1 | Non-fish bearing (N) | 4:1 | Other (O) | 3:1; and |  |  | <p>alternative on-site mitigation ratios with required supplemental actions will improve mitigation success because supplemental actions provide functions that can be realized in the near term and are equivalent to or greater than those being impacted. Increased mitigation requirements align with BAS and will help King County meet the GMA no net loss requirement for ecological functions” (page 117). Whether to allow alternative mitigation and to what degree are policy choices.</p> <ul style="list-style-type: none"><li>• Council may wish to consider allowing a primary action as an option in addition to secondary actions.</li><li>• Council may wish to expand this action to allow enhancement that goes above and beyond the “equal function” standard for those projects that achieves greater function than the impact area. Language could be revised to state: “Planting native or climate-smart trees and shrubs in a riparian area addition that is equal to one-half of the area of impact, contiguous with existing riparian areas, and in a manner that achieves equal or greater function than the impacted area.”</li><li>• Off-site riparian area mitigation ratios are higher than aquatic area mitigation ratios. Executive staff indicate that mitigation ratios are higher to account for the temporal lag for vegetation to grow and provide riparian functions. Establishing higher baseline standards for riparian areas is a policy choice.</li><li>• The mitigation ratio for illegal alterations was raised to 3:1 for Type O riparian areas and 4:1 for all other aquatic and riparian areas. Executive staff indicate that this would address not using typical best management practices and serving as a disincentive. The specific ratio for illegal alterations is a policy choice.</li></ul> |

Proposed changes would include alternative mitigation approaches.</li><li>Subsection H. is proposed to be removed. Temporary impacts would not be explicitly called out for mitigation as it is for wetland buffers. Executive staff indicate that this would be covered in a critical area report and this code, and that this Subsection H. is inappropriate to describe alterations as temporary and may not meet no net loss. Council may wish to consider whether to include code requirements for mitigation for temporary impacts.</li><li>Overall, Council may wish to consider restructuring and streamlining for ease of reading.</li></ul> |
| WILDLIFE HABITAT CONSERVATION AREAS                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |                                                            |                                                                   |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| <p><b>NOT INCLUDED IN PROPOSED ORDINANCE</b></p> <p><b>K.C.C. 21A.06.1422 Wildlife.</b> Wildlife: birds, fish and animals, that are not domesticated and are considered to be wild. (Ord. 15051 § 123, 2004).</p> <p><b>K.C.C. 21A.06.1423 Wildlife habitat conservation area.</b> Wildlife habitat conservation area: an area for a species whose habitat the King County Comprehensive Plan requires the county to protect that includes an active breeding site and the area surrounding the breeding site that is necessary to protect breeding activity. (Ord. 15051 § 124, 2004).</p> <p><b>K.C.C. 21A.06.1424 Wildlife habitat network.</b> Wildlife habitat network: the official wildlife habitat network defined and mapped in the King County Comprehensive Plan that links wildlife habitat with critical areas, critical area buffers, priority habitats, trails, parks, open space and other areas to provide for wildlife movement and alleviate habitat fragmentation. (Ord. 15051 § 125, 2004).</p> <p><b>K.C.C. 21A.06.1425 Wildlife shelter. Wildlife shelter:</b> a facility for the temporary housing of sick, wounded or displaced wildlife. (Ord. 10870 § 325, 1993).</p> | Not included in proposed ordinance                         | Not included in proposed ordinance                                | <p><i>Section Notes:</i></p> <ul style="list-style-type: none"><li>This section is not part of the proposed ordinance – it is included in this matrix for reference.</li></ul>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
| <p><b>K.C.C. 21A.24.382 – Development standards for proposals and alterations for sites with wildlife habitat conservation areas present.</b></p> <p><u>SECTION 76.</u> Ordinance 15051, Section 198, as amended, and K.C.C. 21A.24.382 are hereby amended to read as follows:<br/>The following development standards apply to development proposals and alterations on sites containing wildlife habitat conservation areas:<br/>A. Unless allowed as an alteration exception under K.C.C. 21A.24.070, only the alterations identified in K.C.C. 21A.24.045 are allowed within a wildlife habitat conservation area;</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | Corrects numbering error and removes duplicative language. | Technical and clarifying changes consistent with existing intent. | <p><i>Section Notes:</i></p> <ul style="list-style-type: none"><li>This section identifies alteration limitations near species, such as specifying what constitutes a wildlife habitat conservation area around specific species and seasonal construction restrictions.</li></ul> <p><i>Policy Analysis:</i></p>                                                                                                                                                                                                                                                                                                                                                                                                                                                |

| Code                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | Executive’s Proposed Change        | Executive’s Intent/Rationale       | Policy Staff Comments | <p>B. For a bald eagle:</p> <p>1. The wildlife habitat conservation area is an area with a four-hundred-foot radius from an active nest;</p> <p>2. Between March 15 and April 30, alterations are not allowed within eight hundred feet of the nest; and</p> <p>((2)) 3. Between January 1 and August 31, land clearing machinery, such as bulldozers, graders or other heavy equipment, may not be operated within eight hundred feet of the nest;</p> <p>C. For a great blue heron:</p> <p>1. The wildlife habitat conservation area is an area with an eight-hundred-twenty-foot radius from the rookery. The department may increase the radius up to an additional one-hundred sixty-four feet if the department determines that the population of the rookery is declining; and</p> <p>2. Between January 1 and July 31, clearing or grading are not allowed within nine-hundred-twenty-four feet of the rookery;</p> <p>D. For a marbled murrelet, the wildlife habitat conservation area is an area with a one-half-mile radius around an active nest;</p> <p>E. For a northern goshawk, the wildlife habitat conservation area is an area with a one-thousand-five-hundred-foot radius around an active nest located outside of the urban growth area;</p> <p>F. For an osprey:</p> <p>1. The wildlife habitat conservation area is an area with a two-hundred-thirty-foot radius around an active nest; and</p> <p>2. Between April 1 and September 30, alterations are not allowed within six-hundred-sixty feet of the nest;</p> <p>G. For a peregrine falcon:</p> <p>1. The wildlife habitat conservation area is an area extending for a distance of one-thousand feet of an eyrie on a cliff face, the area immediately above the eyrie on the rim of the cliff, and the area immediately below the cliff;</p> <p>2. Between March 1 and June 30, land-clearing activities that result in loud noises, such as from blasting, chainsaws, or heavy machinery, are not allowed within one-half mile of the eyrie; and</p> <p>3. New power lines may not be constructed within one-thousand feet of the eyrie;</p> <p>H. For a spotted owl, the wildlife habitat conservation area is an area with a three-thousand-seven-hundred-foot radius from an active nest;</p> <p>I. For a Townsend's big-eared bat:</p> <p>1. Between June 1 and October 1, the wildlife habitat conservation area is an area with a four-hundred-fifty-foot radius from the entrance to a cave or mine, located outside of the urban area, with an active nursery colony;</p> <p>2. Between November 1 and March 31, the wildlife habitat conservation area is an area with a four-hundred-fifty-foot radius around the entrance to a cave or mine located outside the urban growth area serving as a winter hibernacula;</p> <p>3. Between March 1 and November 30, a building, bridge, tunnel, or other structure used solely for day or night roosting may not be altered or destroyed;</p> <p>4. Between May 1 and September 15, the entrance into a cave or mine that is protected because of bat presence is protected from human entry; and</p> <p>5. A gate across the entrance to a cave or mine that is protected because of bat presence must be designed to allow bats to enter and exit the cave or mine;</p> <p>J. For a Vaux's swift:</p> <p>1. The wildlife habitat conservation area is an area with a three-hundred-foot radius around an active nest located outside of the urban growth areas;</p> <p>2. Between April 1 and October 31, clearing, grading, or outdoor construction is not allowed within four hundred feet of an active or potential nest tree. The applicant may use a species survey to demonstrate that the potential nest tree does not contain an active nest;</p> <p>K. The department shall require protection of an active breeding site of any federal or state listed endangered, threatened, sensitive, and candidate species or King County species of local importance ((not listed in subsections B. through J. of this section)). If the Washington state Department of Fish and Wildlife has adopted management recommendations for a species covered by this subsection, the department shall follow those management recommendations. If management recommendations have not been adopted, the department shall base protection decisions on best available science.</p> |                                    |                                    | <ul style="list-style-type: none"><li>• The list of protected species was updated under the 2024 KCCP update. This list can be found in Chapter 5.</li><li>• Executive staff indicate that the species-specific standards in this section are maintained under this proposed ordinance, as the <a href="#">BAS report</a> did not indicate a reason to modify the standards in this section. Executive staff also note that requiring a minimum protective radius provides for more consistent application of appropriate standards.</li><li>• <a href="#">Protected species</a> includes those listed by the federal or state government as endangered, threatened, sensitive or candidate species, and those listed in the County’s “species of local importance.” This species of local importance list was updated in the Comprehensive Plan in 2024. According to Executive staff, if substantial clearing is proposed during breeding season in an area that potentially contains protected species, a survey to identify potential species would need to be conducted and protections put in place. Protections may vary based on the species.</li></ul> |

| <p>The department shall make certain that segments of the wildlife habitat network are set aside and protected along the designated wildlife habitat network adopted by the King County Comprehensive Plan as follows:</p> <p>A. This section applies to the following development proposals on parcels that include a segment of the designated wildlife habitat network:</p> <p>1. All urban planned developments, fully contained communities, binding site plans, subdivisions and short subdivisions; and</p> <p>2. All development proposals on individual lots unless a segment of the wildlife habitat network in full compliance with K.C.C. 21A.24.386 already exists in a tract, easement or setback area, and a notice of the existence of the segment has been recorded;</p> <p>B. Segments of the wildlife habitat network must be identified and protected in one of the following ways:</p> <p>1. In urban planned developments, fully contained communities, binding site plans, subdivisions and short subdivisions, native vegetation is placed in a contiguous permanent open-space tract with all developable lots sited on the remaining portion of the project site, or the lots are designed so that required setback areas can form a contiguous setback covering the network segments; or</p> <p>2. For individual lots, the network is placed in a county-approved setback area. To the maximum extent practical, existing native vegetation is included in the network. The notice required by K.C.C. 21A.27.170 is required; and</p> <p>C. All wildlife habitat network tracts or setback areas must meet the design standards in K.C.C. 21A.24.386. (Ord. 15051 § 201, 2004: Ord. 13694 § 90, 1999: Ord. 11621 § 52, 1994. Formerly K.C.C. 21A.14.260).</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |                                    |                                    | <ul style="list-style-type: none"><li>• The critical area tracts section does not include fully contained communities.</li><li>• Placing wildlife habitat networks in a tract for subdivisions, short subdivisions, and binding site plans is a policy choice.</li><li>• Placing wildlife habitat networks in a setback instead of an easement is a policy choice.</li></ul> |
| <p><b>NOT INCLUDED IN PROPOSED ORDINANCE</b></p> <p><b>K.C.C. 21A.24.386 Wildlife habitat networks - development standards and alterations.</b></p> <p>The following standards apply to development proposals and alterations on sites containing wildlife habitat network:</p> <p>A. Unless allowed as an alteration exception under K.C.C. 21A.24.070, only the alterations identified in K.C.C. 21A.24.045 are allowed in the wildlife habitat network;</p> <p>B. The wildlife habitat network is sited to meet the following conditions:</p> <p>1. The network forms one contiguous tract or setback area that enters and exits the property where the network crosses the property boundary;</p> <p>2. To the maximum extent practical, the network maintains a width of three-hundred feet. The network width shall not be less than one-hundred-fifty feet at any point; and</p> <p>3. The network is contiguous with and includes critical areas and their buffers;</p> <p>4. To the maximum extent practical, the network connects isolated critical areas or habitat; and</p> <p>5. To the maximum extent practical, the network connects with wildlife habitat network segments, open space tracts or wooded areas on adjacent properties, if present;</p> <p>C. The wildlife habitat network tract must be permanently marked in accordance with this chapter;</p> <p>D. An applicant proposing recreation, forestry or any other use compatible with preserving and enhancing the habitat value of the wildlife habitat network located within the site must have an approved management plan. The applicant shall include and record the approved management plan for a binding site plan or subdivision with the covenants, conditions and restrictions (CCRs), if any. Clearing within the wildlife habitat network in a tract or tracts is limited to that allowed by an approved management plan;</p> <p>E. If the wildlife habitat network is contained in a setback area, a management plan is not required. Clearing is not allowed within a wildlife habitat network within a setback area on individual lots, unless the property owner has an approved management plan;</p> <p>F. In urban planned developments, fully contained communities, binding site plans, subdivisions and short subdivisions a homeowners association or other entity capable of long term maintenance and operation shall monitor and assure compliance with any approved management plan;</p> <p>G. Segments of the wildlife habitat network set aside in tracts, conservation easements or setback area must comply with K.C.C. 16.82.150;</p> | Not included in proposed ordinance | Not included in proposed ordinance | <p><i>Policy Analysis:</i></p> <ul style="list-style-type: none"><li>• References to urban planned developments should be deleted, as they were repealed in the 2024 KCCP update.</li></ul>                                                                                                                                                                                  |

| <p>H. The department may credit a permanent open space tract containing the wildlife habitat network toward the other applicable requirements such as surface water management and the recreation space requirement of K.C.C. 21A.14.180, if the proposed uses within the tract are compatible with preserving and enhancing the wildlife habitat value. Restrictions on other uses within the wildlife habitat network tract shall be clearly identified in the management plan;</p> <p>I. The director may waive or reduce these standards for public facilities such as schools, fire stations, parks and road projects. (Ord. 15051 § 203, 2004; Ord. 11621 § 53, 1994. Formerly K.C.C. 21A.14.386).</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |                                                                                                                     |                                                                                                                                                     |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
| <p><b>K.C.C. 21A.24.388 - Wildlife habitat conservation area mitigation ratios.</b></p> <p><u>SECTION 77.</u> Ordinance 15051, Section 204, and K.C.C. 21A.24.388 are hereby amended to read as follows:</p> <p>In addition to the requirements in K.C.C. 21A.24.130, 21A.24.125 and 21A.24.133, the following applies to mitigation to compensate for the adverse impacts associated with wildlife habitat conservation areas and wildlife habitat networks:</p> <p>A. Mitigation to compensate for the adverse impacts to a wildlife habitat conservation area ((<del>must</del>)) <u>shall</u> prevent disturbance of each protected species. On-site mitigation may include management practices, such as timing of the disturbance. <u>Off-site mitigation is limited to sites that will enhance the wildlife habitat conservation area</u>;</p> <p>B. Mitigation to compensate for the adverse impacts to the wildlife habitat network must achieve equivalent or greater biologic functions including, but not limited to, habitat complexity and connectivity functions. Specific mitigation requirements for impacts to the wildlife habitat network shall:</p> <ol style="list-style-type: none"><li>1. Expand or enhance the wildlife network as close to the location of impact as feasible; and</li><li>2. Attain the following ratios of area of mitigation to area of alteration:<ol style="list-style-type: none"><li>a. for mitigation on site:<ol style="list-style-type: none"><li>(1) <u>1.5:1</u> ratio for rectifying an illegal alteration to a wildlife habitat network; and</li><li>(2) 1.5:1 ratio for enhancement or restoration; and</li></ol></li><li>b. for mitigation off-site:<ol style="list-style-type: none"><li>(1) 2:1 ratio for rectifying an illegal alteration to a wildlife habitat network; and</li><li>(2) 3:1 ratio for enhancement or restoration;</li></ol></li></ol></li></ol> <p>C. For <u>temporary alterations</u>, the department may require <u>rectification</u>, restoration, or enhancement of the altered wildlife habitat network;</p> <p>D. The department may increase the width of the wildlife habitat network to mitigate for risks to habitat functions;</p> <p>E. To the maximum extent practical, mitigation projects involving wildlife habitat network restoration should provide replication of the site's prealteration natural environment including:</p> <ol style="list-style-type: none"><li>1. Soil type, conditions, and physical features;</li><li>2. Vegetation diversity and density; and</li><li>3. Biologic and habitat functions; and</li></ol> <p>F. The department may modify the requirements in this section if the applicant demonstrates that greater wildlife habitat functions will be obtained in the same wildlife habitat conservation area or wildlife habitat network through alternative mitigation measures.</p> | <p>Increases mitigation ratio for illegal alterations made within a wildlife habitat network from 1:1 to 1.5:1.</p> | <p>The ratio is proposed to be increased to reduce the risk that mitigation will be insufficient to provide no net loss of ecological function.</p> | <p><i>Section Notes:</i></p> <ul style="list-style-type: none"><li>• This section addresses mitigation ratios to compensate for adverse impacts to wildlife habitat conservation areas and wildlife habitat networks.</li></ul> <p><i>Policy Analysis:</i></p> <ul style="list-style-type: none"><li>• Executive staff indicate that “<u>sites that will enhance the wildlife habitat conservation area</u>” refers to enhancing/benefiting the species or habitat that was impacted. Given that this sentence concerns mitigation in a different location than the original wildlife habitat conservation area, it may be clearer to state that the off-site mitigation will enhance the habitat of the species impacted.</li><li>• <u>This ratio</u> is recommended by WDFW and supported by Executive staff to address uncertain success rates from mitigation.</li><li>• <u>Temporary alterations</u> do not have a prescribed ratio. Executive staff indicate that a 1:1 restoration ratio would be a baseline from following mitigation sequencing standards and DLS could require enhancement beyond the baseline, depending on the nature of the impact. This is a policy choice.</li><li>• Council may wish to change “<u>alterations</u>” to “impacts” and “<u>rectification</u>” to “rehabilitation” for clarity.</li></ul> |

| <p>D. <u>The property owner or applicant may develop the farm management plan as part of a program offered or approved by King County.</u> A property owner or applicant seeking to use the process to allow alterations in critical area buffers shall develop a farm management plan based on the following goals, which are listed in order of priority:</p> <ol style="list-style-type: none"><li>1. To maintain the productive agricultural land base and economic viability of agriculture on the site;</li><li>2. To maintain, restore, or enhance critical areas to the maximum extent practical in accordance with the site-specific goals of the landowner;</li><li>3. To the maximum extent practical in accordance with the site-specific goals of the landowner, maintain, and enhance natural hydrologic systems on the site;</li><li>4. To use federal, state, and local best management practices and best available science for farm management to achieve the goals of the farm management plan; and</li><li>5. To monitor the effectiveness of best management practices and implement additional practices through adaptive management to achieve the goals of the farm management plan.</li></ol> <p>E. If a part or all of the site is located within the shoreline jurisdiction, the farm management plan shall:</p> <ol style="list-style-type: none"><li>1. Consider and be consistent with the goals of the shoreline management act and the policies of the King County shoreline master program;</li><li>2. Consider the priorities of the King County shoreline protection and restoration plan; and</li><li>3. Ensure no net loss of shoreline ecological functions <u>and critical area functional and values.</u></li></ol> <p>F. <del>((The property owner or applicant may develop the farm management plan as part of a program offered or approved by King County.))</del> The plan shall include, but is not limited to, the following elements:</p> <ol style="list-style-type: none"><li>1. A site inventory identifying critical areas, structures, cleared and forested areas, and other significant features on the site;</li><li>2. Site-specific performance standards and best management practices to maintain, restore or enhance critical areas and <del>((their))</del> <u>associated</u> buffers, and maintain and enhance native vegetation on the site including the best management practices for the installation and maintenance of farm field access drives and agricultural drainages;</li><li>3. A plan for future changes to any existing structures or for any changes to the landscape that involve clearing or grading;</li><li>4. A plan for implementation of performance standards and best management practices;</li><li>5. A plan for monitoring the effectiveness of measures taken to protect critical areas and <del>((their))</del> <u>associated</u> buffers <del>((and to modify)).</del> <u>Modification to the farm management plan should occur</u> if adverse impacts <del>((occur))</del> <u>are identified.</u></li></ol> <p>G. If applicable, a farm management plan shall include documentation of compliance with flood compensatory storage and flood conveyance in accordance with K.C.C. 21A.24.240.</p> <p>H. A farm management plan is not effective until approved by the county. Before approval, the county may conduct a site inspection, <del>((which may be through a program offered or approved by King County.))</del> to verify that the plan is <del>((reasonably))</del> likely to accomplish the goals in subsection D. of this section and consistent with subsection E. of this section.</p> <p>I. <del>((Once approved, a))</del> Activities carried out in compliance with the approved farm management plan shall be deemed in compliance with this chapter. In the event of a potential code enforcement action, <del>((the department of local services, permitting division, shall first inform the department of natural resources and parks of the activity. Before taking code enforcement action.))</del> the department of local services, permitting division, shall consult with the department of natural resources and parks and the King Conservation District to determine whether the activity is consistent with the farm management plan.</p> |                                                                                                                                                                                                                                                                                                |                                                                                                                                                                                                                                   | <p>flexibility or PBRS credit, they are reviewed and approved by DNRP.</p> <p><i>Policy Analysis:</i></p> <ul style="list-style-type: none"><li>• The County has a <u>public rule</u> dating to 2005. The <u>BAS report</u> recommends an update to this public rule to clarify the review and approval process, ensure use of the most current best management practices, and support application of a monitoring and adaptive management framework. The BAS report indicates that the Executive plans to update the rule following the adoption of this proposed ordinance. Whether to defer the requirements of a Farm Plan to a public rule process, rather than adopted through ordinance adopted by the Council, is a policy choice. Whether to have KCD, a separate government from the County, implement and enforce the plans, is also a policy choice.</li></ul> |
| <p><b>K.C.C. 21A.30.045 - Farm management plan requirements.</b></p> <p><u>SECTION 83.</u> Ordinance 11168, Section 3 as amended, and K.C.C. 21A.30.045 are hereby amended to read as follows:</p> <p>A. To achieve the maximum density allowances using a livestock management component of a farm management plan, the plan must meet the following criteria:</p> <ol style="list-style-type: none"><li>1. The plan is developed as part of a program authorized or approved by King County. Certified Washington state Department of Ecology nutrient management plans that are consistent with all of the criteria of this section may substitute for a livestock management component of a farm management plan for commercial dairy farms. Commercial dairy farms that do not have approved nutrient management plans must meet the requirements of K.C.C 21A.30.060;</li><li>2. The plan includes site-specific management measures for minimizing nonpoint pollution from agricultural activities and for managing <u>wetland and aquatic areas</u> including, but not limited to:<ol style="list-style-type: none"><li>a. livestock watering;</li><li>b. grazing and pasture management;</li></ol></li></ol>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | <ol style="list-style-type: none"><li>(1) Changes references of "aquatic area buffers" to "riparian areas."</li><li>(2) Changes term "salmonid" to "fish."</li><li>(3) Updates standards for grazing area buffer including diverse, mature vegetation for type S and F aquatic areas</li></ol> | <ol style="list-style-type: none"><li>(1) Changes are proposed throughout the code to change term or reference from "aquatic area buffers" to "riparian areas," where appropriate, consistent with current terminology.</li></ol> | <p><i>Section Notes:</i></p> <ul style="list-style-type: none"><li>• This section addresses the livestock management component of a farm management plan.</li></ul> <p><i>Policy Analysis:</i></p> <ul style="list-style-type: none"><li>• <u>Wetland buffers and riparian areas</u> could be added to this subsection, as these are also areas that should be protected and are addressed in Subsection A.2.e.</li></ul>                                                                                                                                                                                                                                                                                                                                                                                                                                                  |

| <p>c. confinement area management;</p> <p>d. manure management; and</p> <p>e. exclusion of animals from aquatic areas <del>((and their buffers)), riparian areas, and wetlands and ((their)) associated buffers</del> with the exception of grazed wet meadows.</p> <p>3. The plan is implemented within a timeframe established in the plan and maintained so that nonpoint pollution attributable to livestock-keeping is minimized; and</p> <p>4. A monitoring plan may be required as part of the livestock management component of a farm management plan to demonstrate that there is no significant impact to water quality and <del>((salmonid fisheries))</del> fish habitat. Monitoring results shall be available to the King County agriculture program.</p> <p>B. The livestock management component of a farm management plan shall, at a minimum:</p> <p>1. <del>((Generally s))</del> <u>Seek to achieve a</u> <del>((twenty-five-foot buffer of))</del>; <u>forty-foot-wide grazing area buffer including</u> diverse, mature vegetation between grazing areas and the ordinary high water mark of all type S and F aquatic areas and the wetland edge of any category I, II, or III wetland with the exception of grazed wet meadows<del>((, using buffer averaging where necessary to accommodate existing structures))</del>; <u>thirty-five-foot-wide grazing area buffer including</u> diverse, mature vegetation between grazing areas and the ordinary high water mark of all type N aquatic areas; and <u>twenty-foot-wide grazing area buffer including</u> diverse, mature vegetation between grazing areas and the wetland edge of any category IV wetlands other than grazed wet meadows. The livestock management component of a farm management plan<del>((s))</del> may vary the width of the <u>grazing area</u> buffer <del>((of an aquatic area or wetland))</del>, and the time and duration of animal exclusion throughout the year, according to guidelines agreed upon by King County and the King Conservation District. The guidelines may support a different <u>grazing area</u> buffer width based on both the nature of the farm operation and the function and sensitivity of the aquatic area or wetland. The plan must include best management practices that avoid having manure accumulate in or within ten feet of type <del>((N or))</del> O waters. <del>((Forested lands being cleared))</del> <u>Clearing of lands</u> for grazing <del>((areas))</del> shall comply with the <u>riparian area widths</u> and critical area buffers and all applicable regulations in K.C.C. chapter 21A.24;</p> <p>2. <del>((Assure))</del> <u>Ensure</u> that drainage ditches on the site do not channel animal waste to aquatic areas and wetlands;</p> <p>3. Achieve an <u>additional twenty</u><del>((-foot buffer))</del> <u>feet of diverse, mature vegetation</u> downslope of any confinement areas within two hundred feet of type S<del>((and))</del>, F, and N waters. This requirement may be waived for existing confinement areas on lots of two and one-half acres or less in size if:</p> <p>a. a minimum buffer of <del>((twenty-five))</del> <u>forty</u> feet of diverse, mature vegetation is achieved;</p> <p>b. manure within the confinement area is removed daily during the winter season from October 15 to April 15, and stored in accordance with K.C.C. 21A.30.060.D.; and</p> <p>c. additional best management practices, as recommended by the King Conservation District, are implemented, and maintained; and</p> <p>4. Include a schedule for implementation.</p> <p>C. Any deviation from the manure management standards must be addressed in a livestock management component of a farm management plan.</p> <p>D. A copy of the final plans shall be submitted to the department of natural resources and parks within sixty days of completion.</p> <p>E. The farm management plan approved by the department of natural resources and parks may be appealed to the hearing examiner in accordance with K.C.C. 20.22.040 and 20.22.080. Appeals may be filed only by the property owner or four members of the King County agriculture commission. Any farm management plan not appealed shall constitute prima facie evidence of compliance with the regulatory provisions of K.C.C. 9.12.035.</p> <p><u>F. Properties operating subject to an existing livestock management farm plan developed based on the standards in effect before the effective date of this ordinance shall be deemed to have satisfied the standards of this section.</u></p> | <p>category I, II, or III wetlands except grazed wet meadows from 25 feet or 40 feet, which can be modified by the livestock management component of a farm management plan.</p> <p>(4) Updates the term "buffer" to "grazing area buffer."</p> <p>(5) Adds a standard for grazing area buffers including diverse, mature vegetation of 35 feet for type N aquatic areas, which can be modified by the livestock management component of a farm management plan.</p> <p>(6) Adds a standard for grazing area buffers including diverse, mature vegetation of 20 feet for category IV wetlands other than grazed wet meadows, which can be modified by the livestock management component of a farm management plan.</p> <p>(7) Adds provision stating that properties operating subject to an</p> | <p>(2) Changes are proposed throughout the code to change "salmonid" to "fish," where appropriate, to be consistent with King County's current protection of all fish species listed by WDFW, WA DNR and King County species of local importance, not just salmonids.</p> <p>(3) The existing code uses the term "buffer" ambiguously; the term "grazing area buffer" is proposed to be used where the code sets standards for the distance from a feature that grazing is excluded. This is different from critical area buffers, in which additional restrictions apply.</p> <p>(4) – (6) Increased grazing area buffer width provides greater protection of wetland buffer and riparian area functions while limiting the reduction of the amount of farmable lands.</p> <p>(7) Clarifies when the proposed standards in this section would apply.</p> | <ul style="list-style-type: none"><li>Animals are allowed to graze in these critical areas outside of the grazing area buffer. Council may wish to clarify this by including “except as otherwise allowed under this title”.</li><li>The grazing area buffers (the minimum distance between a critical area and a grazing area) are proposed to increase between 15 and 50 feet for most areas, depending on the type or category of wetland or aquatic area and whether a farm management plan (FMP) is provided. The table below shows a simplified summary of the major changes.</li></ul> <table><tr><th>Type</th><th>FMP</th><th>Existing</th><th>Proposed</th></tr><tr><td colspan="4">RIPARIAN AREA</td></tr><tr><td>S or F</td><td>Yes</td><td>25 ft</td><td>40 ft</td></tr><tr><td>S or F</td><td>No</td><td>50 ft</td><td>50 ft</td></tr><tr><td>N</td><td>Yes</td><td>0 ft</td><td>35 ft</td></tr><tr><td>N</td><td>No</td><td>0 ft</td><td>50 ft</td></tr><tr><td>O</td><td>Y/N</td><td>0 ft</td><td>0 ft</td></tr><tr><td colspan="4">WETLAND BUFFER</td></tr><tr><td>I, II, or III</td><td>Yes</td><td>25 ft</td><td>50 ft</td></tr><tr><td>I, II, or III</td><td>No</td><td>50 ft</td><td>50 ft</td></tr><tr><td>IV</td><td>Yes</td><td>0 ft</td><td>20 ft</td></tr><tr><td>IV</td><td>No</td><td>0 ft</td><td>25 ft</td></tr></table> <ul style="list-style-type: none"><li>Although the buffers are proposed to increase in this proposed ordinance, they are significantly below the buffer widths recommended to achieve no net loss and therefore are depart from the County’s BAS. The BAS report states: “King County has high confidence that there is high risk to riparian-area functions over the long term because the areas between 50 feet and SPTH (approximately 200 feet) will lack protections” (page 96). The BAS report indicates that buffer widths are intended to protect agricultural lands, consistent with GMA goals. The BAS also indicate that “King County employs a broad array of nonregulatory measures to protect critical areas and reduce risk to critical area functions and values” (page 96). A summary of nonregulatory measures is at the end of this matrix. Executive staff indicate that the changes “clarify the minimum benchmark to be applied to riparian areas.” The language is intended to reflect that the King Conservation District and the landowner develop the plan, which is tailored to the site and the County cannot require restoration for past development impacts, while also acknowledging mature vegetation may take substantial effort to achieve. As proposed, this language would not require a minimum buffer, and instead would establish a target that could be lower or higher than the widths identified. This is not described in the BAS report in this manner; instead the BAS report treats them as a minimum requirement.</li><li>• It may be clearer to add back in language that the 20 feet is a buffer that is in addition to the existing grazing area buffer.</li></ul> |
| <p><b>K.C.C. 21A.30.060 - Animal regulations – Livestock management standards.</b></p> <p><u>SECTION 84.</u> Ordinance 10870, Section 534, as amended, and K.C.C. 21A.30.060 are hereby amended to read as follows:</p> <p>Property owners with farms containing either large livestock at densities greater than one animal unit per two acres, or small livestock at densities greater than five animals per acre, or both, are not required to follow a((#)) livestock management plan if the owners adhere to the management standards in subsections A. through G. of this section. This section applies only if farm practices do not result in violation of any federal, state, or local water quality standards.</p> <p>A. To minimize livestock access to aquatic areas, property owners shall utilize the following livestock watering options:</p> <p>1. The preferred option, which is a domestic water supply, stock watering pond, roof runoff collection system, or approved pumped supply from the aquatic areas so that livestock are not required to enter aquatic areas for their water supply.</p> <p>2. Livestock access to type S((and)), F, and N waters((, including their buffers)) and riparian areas shall be limited to crossing and watering points that have been addressed by a crossing or watering point plan designed to Natural Resource Conservation Services or King Conservation District specifications that prevent free access along the length of the aquatic areas.</p> <p>a. Fencing shall be used as necessary to prevent livestock access to type S ((and)), F, and N waters.</p> <p>b. Bridges may be used, in accordance with K.C.C. chapter 21A.24, in lieu of crossings. Piers and abutments shall not be placed within the ordinary high water mark or top-of-bank, whichever is greater. Bridges shall be designed to allow free flow of flood waters and shall not diminish flood carrying capacity. These bridges may be placed without a county building permit, but the permit waiver shall not constitute any assumption of liability by the county with regard to such bridge or its placement. The waiver of county building permit requirements does not constitute a waiver from other required agency permits.</p> <p>B.1. Existing grazing areas not addressed by K.C.C. chapter 21A.24 shall maintain a ((vegetative buffer of fifty feet)) fifty-foot-wide grazing area buffer from the ((wetland)) edge of a category I, II((or)), III, or IV wetland, except those wetlands meeting the</p> | <p>(1) Adds type N waters to aquatic area types to which livestock access standards apply.</p> <p>(2) Adds category IV wetlands to the wetland categories to which grazing area buffer standards apply.</p> <p>(3) Updates the term "vegetative buffer" to "grazing area buffer."</p> <p>(4) Clarifies that properties with existing fencing installed at distances other than those</p> | <p>(1) Type N waters flow into fish bearing streams and are proposed to be added to provide greater protection of riparian area functions while limiting the reduction of the amount of farmable land.</p> <p>(2) Category IV wetlands should be protected similarly to other wetland types from the impacts of livestock due to their importance for wildlife and water</p> | <p><i>Section Notes:</i></p> <ul style="list-style-type: none"><li>• This section addresses livestock on farms without a farm management plan.</li></ul> <p><i>Policy Analysis:</i></p> <ul style="list-style-type: none"><li>• Although the buffers are proposed to increase in this proposed ordinance, they are significantly below the buffer widths recommended to achieve no net loss and therefore are depart from the County’s BAS. The BAS report states: “King County has high confidence that there is high risk to riparian-area functions over the long term because the areas between 50 feet and SPTH (approximately 200 feet) will lack protections” (page 96). The BAS report indicates that buffer widths are intended to protect agricultural lands, consistent with GMA goals. The BAS also indicate that “King County employs a broad array of nonregulatory measures to protect critical</li></ul>                                                                                                                                     |

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <p>definition of grazed wet meadows, or the ordinary high water mark of a type S((<del>or</del>)), F, or N water, and a twenty-five-foot-wide grazing area buffer from the edge of a category IV wetland except those wetlands meeting the definition of grazed wet meadows.</p> <p>2. ((<del>Forested</del>)) Lands being cleared for grazing areas shall comply with the riparian area widths and critical area buffers and the associated regulations in K.C.C. chapter 21A.24.</p> <p>3. The grazing area buffer may be reduced to twenty-five feet where a twenty-five-foot buffer of diverse, mature vegetation already exists. This buffer reduction may not be used when ((<del>forested</del>)) lands are being cleared for grazing areas.</p> <p>4. Fencing shall be used to establish and maintain the grazing area buffer unless the buffer is otherwise impenetrable to livestock.</p> <p>5. Fencing installed in accordance with the ((<del>1990 Sensitive Area Ordinance before February 14, 1994</del>)) standards in effect before January 1, 2005, at setbacks other than those specified in subsection B.((<del>1. and 2.</del>)) of this section shall be deemed to constitute compliance with those requirements.</p> <p>6. Grazing areas within two hundred feet of a type S((<del>or</del>)), F, or N water or category I, II((<del>or</del>)), III, or IV wetland shall not be plowed during the rainy season from October 1 through April 30.</p> <p>7. Grazing areas may extend to the property line, provided that type S((<del>or</del>)), F, or N waters and category I, II((<del>and</del>)), III, or IV wetlands that are located adjacent to the property line are ((<del>buffered</del>)) protected in accordance with subsection B.1., 2., or 3. of this section.</p> <p>C.1. Fencing shall be used to establish and maintain the buffer except where existing natural vegetation is sufficient to exclude livestock from the buffer((<del>Existing confinement areas that do not meet these requirements shall be modified as necessary to provide the buffers specified in this section within five years of January 1, 2005, though the footprint of existing buildings need not be so modified</del>)); and</p> <p>c. have roof drains of any buildings in the confinement area diverted away from the confinement area.</p> <p>2. Confinement areas may extend to the property line((<del>;</del>)) if aquatic areas and wetlands adjacent to the property line are buffered in accordance with ((<del>K.C.C. this</del>)) subsection C. of this section.</p> <p>D.1. Manure storage areas shall be managed as follows:</p> <p>a. Surface flows and roof runoff shall be diverted away from manure storage areas;</p> <p>b. All manure stockpiled within two hundred feet uphill of any the ordinary high water mark of a type S ((<del>or</del>)), F, or N water or the edge of a category I, II((<del>or</del>)), III, or IV wetland shall either be covered in a manner that excludes precipitation and allows free flow of air to minimize fire danger or be placed in an uncovered concrete bunker or manure lagoon or held for pickup in a dumpster, vehicle, or other facility designed to prevent leachate from reaching any aquatic area or wetland. Concrete bunkers shall be monitored quarterly for the first two years after installation, then annually unless problems were identified in the first two years, in which case quarterly monitoring shall continue and appropriate adjustments shall be made;</p> <p>c. Manure shall not be stored in any ((<del>aquatic area buffer</del>)) riparian area or wetland buffer, with the exception of grazed or tilled wet meadows unless there is no other alternative on the property. Manure shall be stored in a location that avoids having runoff from the manure enter aquatic areas or wetlands. Manure piles shall not be closer than one hundred feet uphill from:</p> <p>(1) any wetland edge excluding grazed or tilled wet meadows;</p> <p>(2) the ordinary high water mark of any aquatic area; or</p> <p>(3) any ditch to which the topography would generally direct runoff from the manure; and</p> <p>d. The location may be reduced to no closer than fifty feet if the manure pile is part of an active compost system that is located on an impervious surface to prevent contact with the soil and includes a leachate containment system.</p> <p>2. Manure shall be spread on fields only during the growing season, and not on saturated or frozen fields.</p> <p>E. For purposes of this section, "buffer maintenance" means allowing vegetation in the grazing area buffer that provides shade for the aquatic area or acts as a filter for storm water entering the aquatic area, other than noxious weeds, to grow to its mature height, though grasses in the buffer may be mowed but not grazed. Grading in the buffer is allowed only for establishment of watering and crossing points, or for other activities permitted in accordance with K.C.C. chapter 21A.24, with the appropriate permits.</p> | <p>specified in this section for which livestock management farm plans have been developed are considered compliant if approved fencing is present for all type S and F aquatic areas.</p> | <p>quality, although they are proposed to have a smaller grazing area buffer than the other categories.</p> <p>(3) The existing code uses the term "buffer" ambiguously; the term "grazing area buffer" is proposed to be used where the code sets standards for the distance from a feature that grazing is excluded. This is different from critical area buffers, in which additional restrictions apply.</p> <p>(4) Establishes when the proposed standards in this section would apply.</p> | <p>areas and reduce risk to critical area functions and values” (page 96). A summary of nonregulatory measures is at the end of this matrix. Maintaining the program and buffer widths for livestock proposed by the ordinance is a policy choice.</p> <ul style="list-style-type: none"><li>• “Existing grazing areas not addressed by K.C.C. chapter 21A.24” is intended to cover those areas without a farm plan. Council may wish to clarify this.</li><li>• The proposed ordinance includes two grazing area buffer widths for Category IV wetlands. Executive staff indicate that the 25-foot grazing area buffer was intended. Council may wish to clarify the buffer width for a Category IV wetland.</li><li>• Grazed wet meadows would not be subject to a buffer, which is a policy choice. Grazed wet meadows are defined as “an emergent wetland that has grasses, sedges, rushes or other herbaceous vegetation as its predominant vegetation and has been previously converted to agricultural activities. “</li><li>• This existing provision would allow buffers to be reduced to 25 feet if “diverse, mature vegetation already exists” on properties without a farm management plan. This buffer would be lower than the buffers identified for properties with a farm management plan, meaning that the provisions would disincentivize property owners from obtaining a farm management plan. This provision could be removed to be consistent with the increased buffers proposed.</li><li>• It is unclear how these provisions would be applied within the shoreline jurisdiction. Council may wish to consider how address these standards in the shoreline jurisdiction.</li></ul> |

| Code | RURAL STEWARDSHIP PLANS                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |                             |                                                                                                                                                                                                                 |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| <p><b>21A.24.055 - Rural stewardship plans.</b></p> <p>A. On a site zoned RA, the department may approve a modification of the minimum buffer widths for aquatic areas, wetlands and wildlife habitat conservation areas and maximum clearing restrictions through a rural stewardship plan for single family detached residential development in accordance with this section.</p> <p>B. The property owner or applicant shall develop the rural stewardship plan as part of a rural stewardship program offered or approved by King County and has the option of incorporating appropriate components of a county-approved farm management or a county-approved forest stewardship plan.</p> <p>C. In its evaluation of any proposed modification of the minimum buffer widths for aquatic areas, wetlands and wildlife habitat conservation areas and maximum clearing restrictions, the department shall consider the following factors:</p> <ol style="list-style-type: none"><li>1. The existing condition of the drainage basin or marine shoreline as designated on the Basin and Shoreline Conditions Map;</li><li>2. The existing condition of wetland and aquatic area buffers;</li><li>3. The existing condition of wetland functions based on the adopted Washington State Wetland Rating System for Western Washington, Washington state Department of Ecology publication number 14-06-029, published October 2014;</li><li>4. The location of the site in the drainage basin;</li><li>5. The percentage of impervious surfaces and clearing on the site; and</li><li>6. Any existing development on the site that was approved as a result of a variance or alteration exception that allowed development within a critical area or critical area buffer. If the existing development was approved through a variance or alteration exception, the rural stewardship plan shall demonstrate that the plan will result in enhancing the functions and values of critical areas located on the site as if the development approved through the variance or alteration exception had not occurred.</li></ol> <p>D. A rural stewardship plan does not modify the requirement for permits for activities covered by the rural stewardship plan.</p> <p>E. <b>Modifications of critical area buffers</b> shall be based on the following prioritized goals:</p> <ol style="list-style-type: none"><li>1. To the maximum extent practical, to avoid impacts to critical areas and, if applicable, to the shoreline jurisdiction;</li><li>2. To avoid impacts to the higher quality wetland or aquatic area or the more protected fish or wildlife species, if there is a potential to affect more than one category of wetland or aquatic area or more than one species of native fish or wildlife;</li><li>3. To maintain or enhance the natural hydrologic systems on the site to the maximum extent practical;</li><li>4. To maintain, restore or enhance native vegetation;</li><li>5. To maintain, restore or enhance the function and value of critical areas or critical area buffers located on the site;</li><li>6. To minimize habitat fragmentation and enhance corridors between wetlands, riparian corridors, wildlife habitat conservation areas and other priority habitats;</li><li>7. To minimize the impacts of development over time by implementing best management practices and meeting performance standards during the life of the development; and</li><li>8. To monitor the effectiveness of the stewardship practices and implement additional practices through adaptive management to maintain, restore or enhance critical area functions when necessary.</li></ol> <p>F. If a part or all of the site is located within the shoreline jurisdiction, the rural stewardship plan shall:</p> <ol style="list-style-type: none"><li>1. Consider and be consistent with the goals of the Shoreline Management Act and the policies of the King County Shoreline Master Program;</li><li>2. Consider the priorities of the King County Shoreline Protection and Restoration Plan; and</li><li>3. Ensure no net loss of shoreline ecological functions.</li></ol> <p>G. A rural stewardship plan may include, but is not limited to, the following elements:</p> <ol style="list-style-type: none"><li>1. Critical areas designation under K.C.C. 21A.24.500;</li><li>2. Identification of structures, cleared and forested areas and other significant features on the site;</li></ol> | Repealed.                   | The County is not currently approving or administering rural stewardship plans. Some code flexibilities offered by Rural Stewardship Plans, such as buffer averaging, are still available in the proposed code. | <p><i>Section Notes:</i></p> <ul style="list-style-type: none"><li>• This proposed repeal would eliminate rural stewardship plans, which is a voluntary plan where RA property owners could reduce buffers, enroll in the public benefit rating system (PBRs), or receive technical assistance in exchange for implementing site-specific best management practices.</li><li>• Executive staff indicate that the rural stewardship program was infrequently used and did not have a dedicated staff team to support the program.</li></ul> <p><i>Policy Analysis:</i></p> <ul style="list-style-type: none"><li>• <b>Buffer reductions</b>, such as those allowed under this code section, depart from <b>BAS</b>, as buffer reductions could result in net loss of environmental functions. The BAS report indicates that buffer widths are intended to protect agricultural lands, consistent with GMA goals. The BAS also indicate that “King County employs a broad array of nonregulatory measures to protect critical areas and reduce risk to critical area functions and values” (page 96). A summary of nonregulatory measures is at the end of this matrix.</li><li>• The removal of rural stewardship plans would remove allowances for <b>reduced buffers</b>, alternative review of impacts, and potential property tax reductions under the <b>PBRs program</b> under the rural stewardship element.</li><li>• Eliminating the program is a policy choice.</li></ul> |

| Code                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | Executive’s Proposed Change                                                                 | Executive’s Intent/Rationale                                                                                                                                                                                                                           | Policy Staff Comments                                                                                                                                                                                                          |
|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <p>3. Location of wetlands and aquatic areas and their buffers, and wildlife habitat;</p> <p>4. Analysis of impacts of planned changes to any existing structures, for other changes to the site that involve clearing or grading or for new development;</p> <p>5. Site-specific best management practices that mitigate impacts of development and that protect and enhance the ecological values and functions of the site;</p> <p>6. A schedule for implementation of the elements of the rural stewardship plan; and</p> <p>7. A plan for monitoring the effectiveness of measures approved under the rural stewardship plan and to modify if adverse impacts occur.</p> <p>H. A rural stewardship plan may be developed as part of a program offered or approved by King County and shall include a site inspection by the county to verify that the plan is reasonably likely to accomplish the goals in subsection E. of this section to protect water quality, reduce flooding and erosion, maintain, restore or enhance the function and value of critical areas and their buffers and maintain or enhance native vegetation on the site of this section.</p> <p>I. A property owner who completes a rural stewardship plan that is approved by the county may be eligible for tax benefits under the public benefit rating system in accordance with K.C.C. 20.36.100.</p> <p>J. If a property owner withdraws from the rural stewardship plan, in addition to any applicable penalties under the public benefit rating system, the following apply:</p> <p>1. Mitigation is required for any structures constructed in critical area buffers under the rural stewardship plan; and</p> <p>2. The property owner shall apply for buffer averaging or an alteration exception, as appropriate, to permit any structure or use that has been established under the rural stewardship plan and that would not otherwise be permitted under this chapter.</p> <p>K. A rural stewardship plan is not effective until approved by the county. Before approval, the county may conduct a site inspection, which may be through a program offered or approved by King County, to verify that the plan is reasonably likely to accomplish the goals in subsection E. of this section.</p> <p>L. Once approved, activities carried out in compliance with the approved rural stewardship plan shall be deemed in compliance with this chapter. In the event of a potential code enforcement action, the department of local services, permitting division, shall first inform the department of natural resources and parks of the activity. Before taking code enforcement action, the department of local services, permitting division, shall consult with the department of natural resources and parks to determine whether the activity is consistent with the rural stewardship plan. (Ord. 19034 § 24, 2019: Ord. 18791 § 174, 2018: Ord. 17420 § 103, 2012: Ord. 16985 § 121, 2010: Ord. 16267 § 41, 2008: Ord. 15051 § 139, 2004).</p> |                                                                                             |                                                                                                                                                                                                                                                        |                                                                                                                                                                                                                                |
| <p><b>K.C.C. 21A.24.061 - Public rules for rural stewardship and farm management plans.</b></p> <p><u>SECTION 43.</u> Ordinance 15051, Section 140, as amended, and K.C.C. 21A.24.061 are hereby amended to read as follows:</p> <p>A. The King County council recognizes that <del>((rural stewardship plans and))</del> farm management plans <del>((are key elements of this chapter that))</del> provide flexibility to <u>natural resource land and</u> rural area residents to establish and maintain a rural lifestyle that includes activities such as farming <del>((and forestry))</del>, while maintaining and enhancing rural character and environmental quality.</p> <p>B. The department of natural resources and parks and department of local services shall adopt public rules to implement K.C.C. 21A.24.045 and 21A.24.051 <del>((relating to rural stewardship plans and farm management plans))</del>, consistent with the provisions of this section. The rules shall <del>((not compromise))</del> <u>be consistent with</u> the King Conservation District’s mandates or standards for farm management planning.</p> <p>C. County departments or approved agencies shall provide technical assistance and resources to landowners to assist them in preparing the plans. The technical assistance shall include, but is not limited to, web-based information, instructional manuals, and classroom workshops. When possible, <del>((the assistance shall be provided at little or no cost to landowners))</del> <u>the cost of such assistance shall be minimal to the landowner.</u> <del>((In addition, t))</del>The department of natural resources and parks shall develop, in consultation as necessary with the department of local services, permitting division, and the King Conservation District, <del>((and make available to the public,))</del> model farm management<del>((, forest management and rural stewardship))</del> plans illustrating examples of plan application content, drawings, and site plans, <del>((to assist landowners in their development of site specific plans for their property))</del> <u>and make available to the public.</u></p> <p>D. The department of natural resources and parks <del>((is))</del> <u>shall be</u> the primary county agency responsible for <del>((rural stewardship plans and))</del> farm management plans that are filed with the county under this chapter. The department of natural resources and parks shall consult with the department of local services, permitting division, in carrying out <del>((its))</del> <u>the</u> responsibilities under this chapter relating to <del>((rural stewardship plans and))</del> farm management plans. The department of natural resources and parks, the department of local services,</p>                                                                                                                                                                                                         | <p>(1) Removes references to rural stewardship plans.</p> <p>(2) Technical corrections.</p> | <p>(1) References to rural stewardship plan are proposed to be removed as code section allowing rural stewardship plans (K.C.C. 21A.24.055) is proposed to be repealed in this ordinance.</p> <p>(2) Correcting formatting and grammatical errors.</p> | <p><i>Policy Analysis:</i></p> <ul style="list-style-type: none"><li>• No issues identified. If the Council chooses to keep rural stewardship plans (as discussed in the row above), this section should be updated.</li></ul> |

| Code                                                     | <i>Policy Analysis:</i> <ul style="list-style-type: none"><li>If the Council chooses to repeal rural stewardship plans, K.C.C. 16.82.154 should be updated to reflect the repeal.</li></ul>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
| <b>K.C.C. 20.36.100 - Sets definitions, eligibility, and standards for the County's Public Benefit Rating System program.</b><br><br><u>SECTION 4.</u> Ordinance 10511, Section 7, as amended, and K.C.C. 20.36.100 are hereby amended to read as follows:<br>A. The definitions in this section apply throughout this section, as well as in K.C.C. 20.36.040 and K.C.C. 20.36.190, unless the context clearly requires otherwise.<br>B. To be eligible for open space classification under the public benefit rating system, a property shall contain one or more qualifying open space resources and have at least five points as determined under this section. The department shall review each application and recommend award of credit for current use of the property. In making the recommendation, the department shall utilize the point system described in subsections C. and D. of this section.<br>C. The following open space resources are each eligible for the points indicated:<br>1. Active trail linkage - fifteen or twenty-five points. "Active trail linkage" means land in private ownership through which the owner agrees to allow public passage for active transportation, as defined in K.C.C. 14.01.xxx <del>(((the new section created by)))</del> <u>Ordinance XXXXX (Proposed Ordinance 2023-0440), ((s)))</u> Section 21 <del>((of this ordinance))</del> , for the purpose of providing a connection between trails within the county's regional trails system and local or regional attractions or points of interest, for trail users including equestrians, pedestrians, bicyclists, and other users. "Local or regional attractions or points of interest" include other trails, parks, waterways, or other recreational and open space attractions, retail centers, arts and cultural facilities, transportation facilities, residential concentrations, or similar destinations. The linkage shall be open to passage by the general public and the property owner shall enter into an agreement with the county consistent with applicable parks and recreation division policies to grant public access. To receive twenty-five points, the property owner shall enter into an agreement with the county regarding improvement of the trail, including trail pavement and maintenance. To receive fifteen points, the property owner shall agree to allow a soft-surface, nonpaved trail. The parks and recreation division is authorized to develop criteria for determining the highest priority linkages for which it will enter into agreements with property owners;<br>2. Aquifer protection area - five points. "Aquifer protection area" means property that has a plant community in which native plants are dominant and that includes an area designated as a critical aquifer recharge area under K.C.C. chapter 21A.24 or applicable city critical aquifer recharge area regulations. At least fifty percent of the enrolling open space area or a minimum of one acre of open space shall be designated as a critical aquifer recharge area. If the enrolling open space area does not have a plant community in which native plants are dominant, revegetation shall occur subject to a revegetation plan reviewed and approved by the department;<br>3. Buffer to public or current use classified land - three points. "Buffer to public or current use classified land" means land that has a plant community in which native plants are dominant or has other natural features, such as streams or wetlands, and that is abutting and provides a buffer to a publicly owned park, trail, or forest, to land legally required to remain in a natural state, to a state or federal highway, or to a property participating in a current use taxation program under chapters 84.33 or 84.34 RCW. The buffer shall be at least fifty feet long and fifty feet <del>((in))</del> wide. Public roads may separate the public land, or land in private ownership classified under chapters 84.33 or 84.34 RCW, from the buffering land, if the entire buffer is at least as wide and long as the adjacent section of the road easement. Landscaping or other nonnative vegetation may not separate the public land or land enrolled under chapters 84.33 or 84.34 RCW from the native vegetation buffer. The department may grant an exception to the native vegetation requirement for property along parkways with historic designation, upon review and recommendation of the historic preservation officer of King County or the local jurisdiction in which the property is located. Eligibility for this exception does not extend to a property where plantings are required or existing plant communities are protected under local zoning codes, development mitigation requirements, or other local regulations; | (1) Removes the opportunity to obtain Public Benefit Rating System points for implementing a rural stewardship plan.<br>(2) Changes term "salmonid" to "fish".<br>(3) Changes term "significance" to "importance".<br>(4) Removes reference to the rural stewardship plan.<br>(5) Technical corrections | (1) The section of code allowing rural stewardship plans (K.C.C. 21A.24.055) is proposed to be repealed in this ordinance.<br>(2) Changes are proposed throughout the code to change "salmonid" to "fish", where appropriate, to be consistent with King County's current protection of all fish species listed by the Washington Dept. of Fish and Wildlife (WDFW), the Washington Department of Natural Resources (WA DNR) and King County species of local importance, not just salmonids.<br>(3) Changes are proposed throughout the code to change phrase "species of local significance" to "species of local importance", consistent with King | <i>Section Notes:</i> <ul style="list-style-type: none"><li>The public benefit rating system (PBRs) is a current use taxation program that allows reduced property taxes for the preservation of open space on private property. Properties receive reductions based on the type and quantity of open space present. An eligible property would receive a 50% reduction or greater, depending on how many points are awarded.</li></ul> <i>Policy Analysis:</i> <ul style="list-style-type: none"><li>The proposed ordinance would remove “<b>rural stewardship plans</b>” as an eligible open space resource qualifying for PBRs.</li><li>Under the current rural stewardship option, properties must be: RA, A, or F; at least one acre in size; have a native plant community (or be in the process of planting); and have implemented rural stewardship plan. A rural stewardship plan would include identifying critical areas, structures, and significant features, implementing site-specific best management practices, a schedule for implementation, and a plan for monitoring.</li><li>Executive staff indicate that the rural stewardship program was infrequently used and did not have a dedicated staff team to support the program. Removing the rural stewardship plan option in the PBRs program is a policy choice.</li></ul> <p>Councilmembers may wish to consider whether to eliminate the rural stewardship</p> |

| Code                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | Executive's Proposed Change | Executive's Intent/Rationale | <p>4. Ecological enhancement land – eighteen points. "Ecological enhancement land" means open space lands undergoing recovery of significantly degraded or lost ecological function or processes. The following requirements shall be met:</p> <p>a. A jurisdiction, natural resource agency, or appropriate organization has committed to sponsoring the ecological enhancement project, with secured funding in place before the application's public hearing;</p> <p>b. The ecological enhancement project shall include removing significant human-made structures, alterations, or impediments such as shoreline armoring, roads, culverts, and wetland fill that are detrimental to significant wildlife or salmonid habitat. The intent of the removal shall be to reestablish natural function or processes to the project area;</p> <p>c. The owner is responsible for providing and implementing an ecological enhancement plan for the proposed project. The approved enhancement plan shall include at least a statement of purpose, detailed description of work to be done, site map of the project area, and specific timeline for the enhancement activities to be completed. The enhancement plan is subject to approval by the department; and</p> <p>d. The owner shall annually provide to the department a monitoring report detailing the enhancement efforts' success for five years following enrollment. The owner shall also provide any additional monitoring reports required by K.C.C. 20.36.190. The monitoring report shall describe the progress and success of the enhancement project and shall include photographs to document the success. Land receiving credit for this category may not receive credit for the <del>((rural stewardship land or))</del> resource restoration <del>((categories))</del> category;</p> <p>5. Equestrian-pedestrian-bicycle trail linkage - thirty-five points. "Equestrian-pedestrian-bicycle trail linkage" means land in private ownership that the property owner allows the public to use as an off-road trail linkage for equestrian, pedestrian, or other active transportation, as defined in K.C.C. 14.01.xxx <del>((the new section created by))</del> Ordinance XXXXX (Proposed Ordinance 2023-0440), <del>((s)))</del>Section 21 <del>((of this ordinance))</del>, uses, or that provides a trail link from a public right-of-way to a trail system. Use of motorized vehicles is prohibited on trails receiving a tax reduction for this category, except for maintenance or for medical, public safety, or police emergencies. Public access is required only on that portion of the property containing the trail. The landowner may impose reasonable restrictions on access that are mutually agreed to by the landowner and the department, such as limiting use to daylight hours. To be eligible as an equestrian-pedestrian-bicycle trail linkage, the owner shall provide a trail easement to an appropriate public or private entity acceptable to the department. The easement shall be recorded with the King County recorder's office or its successor. In addition to the area covered by the trail easement, adjacent land used as pasture, barn, or stable area and any corral or paddock may be included, if an approved and implemented farm management plan is provided. Land necessary to provide a buffer from the trail to other nonequestrian uses, land that contributes to the aesthetics of the trail, such as a forest, and land set aside and marked for off road parking for trail users may also be included as land eligible for current use taxation. Those portions of private roads, driveways, or sidewalks open to the public for this purpose may also qualify. Fencing and gates are not allowed in the trail easement area, except those that are parallel to the trail or linkage;</p> <p>6. Farm and agricultural conservation land - five points. "Farm and agricultural conservation land" means land previously classified as farm and agricultural land under RCW 84.34.020 that no longer meets the criteria of farm and agricultural land, or traditional farmland not classified under chapter 84.34 RCW that has not been irrevocably devoted to a use inconsistent with agricultural uses and has a high potential for returning to commercial agriculture. The property shall be used for farm and agricultural activities or have a high probability of returning to agriculture and the property owner shall commit to returning the property to farm or agricultural activities by implementing a farm management plan. An applicant shall have an approved farm management plan in accordance with K.C.C. 21A.24.051 that is acceptable to the department and that is being implemented according to its proposed schedule of activities before receiving credit for this category. Farm and agricultural activities shall occur on at least one acre of the property. Eligible land shall be zoned to allow agricultural uses and be owned by the same owner or held under the same ownership. Land receiving credit for this category may not receive credit for the contiguous parcels under separate ownership category;</p> <p>7. Forest stewardship land - five points. "Forest stewardship land" means property that is managed according to an approved forest stewardship plan and that is not enrolled in the designated forestland program under chapter 84.33 RCW. The property shall contain at least four acres of contiguous forestland, which may include land undergoing reforestation, according to the approved plan. The owner shall have and implement a forest stewardship plan approved by the department. The forest stewardship plan may emphasize forest retention, harvesting, or a combination of both. Land receiving credit for this category may not receive credit for the resource restoration <del>((or rural stewardship land categories))</del> category;</p> <p>8. Historic landmark or archeological site: buffer to a designated site - three points. "Historic landmark or archaeological site: buffer to a designated site" means property adjacent to land constituting or containing a designated county or local historic landmark or archeological site, as determined by King County's historic preservation officer or by a manager of a certified local government program</p> |                             | <p>County Comprehensive Plan terminology.</p> <p>(4) References to rural stewardship plan are proposed to be removed as code section allowing rural stewardship plans (K.C.C. 21A.24.055) is proposed to be repealed in this ordinance.</p> <p>(5) Corrections made to formatting and grammar.</p> | <p>provision entirely as proposed by the Executive, replace the option with similar criteria that would not require the establishment of a plan, or add other options to support properties that may have increased buffers under other critical areas changes in this proposed ordinance.</p> |

| Code                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | | <p>in the jurisdiction in which the property is located. A property shall have a plant community in which native plants are dominant and provide a significant buffer for a designated landmark or archaeological site listed on the county or other certified local government list or register of historic places or landmarks. "Significant buffer" means land and plant communities that provide physical, visual, noise, or other barriers and separation from adverse effects to the historic resources due to adjacent land use;</p> <p>9. Historic landmark or archeological site: designated site – five points. "Historic landmark or archaeological site: designated site" means land that constitutes or contains a historic landmark designated by King County or other certified local government program in the jurisdiction in which the property is located. Historic landmarks include buildings, structures, districts, or sites of significance in the county's historic or prehistoric heritage, such as Native American settlements, trails, pioneer settlements, farmsteads, roads, industrial works, bridges, burial sites, prehistoric and historic archaeological sites, or traditional cultural properties. A property shall be listed on a county or other certified local government list or register of historic places or landmarks for which there is local regulatory protection. Eligible property may include property that contributes to the historic character within designated historic districts, as defined by the historic preservation officer of King County or other certified local government jurisdiction. The King County historic preservation officer shall make the determination on eligibility;</p> <p>10. Historic landmark or archeological site: eligible site - three points. "Historic landmark or archaeological site: eligible site" means land that constitutes or contains a historic property that has the potential of being designated by a certified local government jurisdiction, including buildings, structures, districts, or sites of significance in the county's historic or prehistoric heritage, such as Native American settlements, pioneer settlements, farmsteads, roads, industrial works, bridges, burial sites, prehistoric and historic archaeological sites, or traditional cultural properties. To be eligible, the historic preservation officer of King County or other certified local government program in the jurisdiction in which the property is located shall determine the property meets the jurisdiction's criteria for designation and listing on the county or other local register of historic places or landmarks for which there is local regulatory protection. Eligible property may include contributing property within designated historic districts. Property listed in the state or national Registers of Historic Places may qualify under this category;</p> <p>11. Public recreation area - five points. "Public recreation area" means land devoted to providing active or passive recreation use or that complements or substitutes for recreation facilities characteristically provided by public agencies. Use of motorized vehicles is prohibited, except for golf carts on golf courses, for maintenance, or for medical, public safety, or police emergencies. The facilities shall be open to the general public or to specific public user groups, such as youth, seniors, or people with disabilities. A property shall be identified by the responsible agency within whose jurisdiction the property is located as meeting the definition of public recreation area. The property owner shall use any best practices defined in K.C.C. chapter 21A.06. If a fee is charged for use, it shall be comparable to the fee charged by a similar public facility;</p> <p>12. Rural open space - five points. "Rural open space" means an area of ten or more contiguous acres of open space located outside of the urban growth area as identified in the King County Comprehensive Plan that:</p> <p>a. has a plant community in which native plants are dominant; or</p> <p>b. is former open farmland, woodlots, scrublands, or other lands that are in the process of being replanted with native vegetation and for which the property owner is implementing an approved farm management, ecological enhancement, forest stewardship, ((rural stewardship,)) or resource restoration plan acceptable to the department;</p> <p>13. ((Rural stewardship land – five points. "Rural stewardship land" means land zoned RA (rural area), A (agricultural), or F (forest), that has an implemented rural stewardship plan under K.C.C. chapter 21A.24 acceptable to the department. On RA zoned properties, the approved rural stewardship plan shall meet the goals and standards of K.C.C. 21A.24.055. On A and F zoned properties, credit for this category is allowed if the plan meets the goals of K.C.C. 21A.24.055. A rural stewardship plan includes, but is not limited to, identification of critical areas, location of structures and significant features, site specific best management practices, a schedule for implementation, and a plan for monitoring as provided in K.C.C. 21A.24.055. To be eligible as rural stewardship land, the open space shall be at least one acre and feature a plant community in which native plants are dominant or be in the process of native vegetation restoration, reforestation, or enhancement. Land receiving credit for this category may not receive credit for the ecological enhancement land, resource restoration, or forest stewardship land categories;</p> <p>14.)) Scenic resource, viewpoint, or view corridor – five points.</p> <p>a. "Scenic resource" means an area of natural or recognized cultural features visually significant to the aesthetic character of the county. The site shall be significant to the identity of the local area, be visible to a significant number of the general public from public rights-of-way, be of sufficient size to substantially preserve the scenic resource value, and enroll at least ten acres of open space.</p> |                             |                              |                       |

| Code                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | Executive's Proposed Change | Executive's Intent/Rationale | Policy Staff Comments |

| <p>b. A "viewpoint" means a property that provides a view of an area visually significant to the aesthetic character of the county. A site shall provide a view of a scenic natural or recognized cultural resource in King County or other visually significant area, allow unlimited public access, and be identified by a permanent sign readily visible from a road or other public right-of-way.</p> <p>c. A "view corridor" means a property that contributes to the aesthetics of a recognized view corridor critical to maintaining a public view of a visually significant scenic natural or recognized cultural resource. The site shall contain at least one acre of open space that contributes to a view corridor visible to the public and that provides views of a scenic natural resource area or recognized cultural resource significant to the local area. The site shall have ((a)) significant cultural areas and contain significant inventoried or designated historic properties, as determined by the King County historic preservation officer or officer of another certified local government program in the jurisdiction in which the property is located in. Eligibility is subject to determination by the department or applicable jurisdiction;</p> <p>((15-)) 14. Significant plant or ecological site - five points. "Significant plant or ecological site" means an area that meets the criteria for Element Occurrence established under the Washington Natural Heritage Program authorized by chapter 79.70 RCW. An Element Occurrence is a particular, on-the-ground observation of a rare species or ecosystem. An eligible site shall be listed as an Element Occurrence by the Washington Natural Heritage Program or be identified as a property that meets the criteria for an Element Occurrence. The identification shall be confirmed by a qualified expert acceptable to the department. The department shall notify the Washington Natural Heritage Program of any verified Element Occurrence on an enrolling property. Commercial nurseries, arboretums, or other maintained garden sites with native or nonnative plantings are ineligible for this category;</p> <p>((16-)) 15. Significant wildlife or ((salmonid)) fish habitat - five points.</p> <p>a. "Significant wildlife or ((salmonid)) fish habitat" means:</p> <p>(1) an area used by animal species listed as endangered, threatened, sensitive, or candidate by the Washington state Department of Fish and Wildlife or Department of Natural Resources or used by species of local ((significance)) importance that are listed by the King County Comprehensive Plan or a local jurisdiction;</p> <p>(2) an area where the species listed in subsection C.((16-))15a.(1) of this section are potentially found with sufficient frequency for critical ecological processes, such as reproduction, nesting, rearing, wintering, feeding, or resting, to occur;</p> <p>(3) a site that meets the criteria for priority habitats as defined by the Washington state Department of Fish and Wildlife and that is so listed by the King County Comprehensive Plan or by the local jurisdiction in which the property is located; or</p> <p>(4) a site that meets criteria for a wildlife habitat conservation area as defined by the department or a local jurisdiction.</p> <p>b. To be eligible, the department, by its own determination or by expert determination acceptable to the department, shall verify that qualified species are present on the property or that the land fulfills the functions described in subsection C.((16-))15.a. of this section. To receive credit for ((salmonid)) fish habitat, the owner shall provide a buffer at least fifteen percent greater in width than required by any applicable regulation. Property consisting mainly of disturbed or fragmented open space determined by the department as having minimal wildlife habitat significance is ineligible;</p> <p>((17-)) 16. Special animal site - three points. "Special animal site" means a site that includes a wildlife habitat network identified by the King County Comprehensive Plan or individual jurisdictions through the Growth Management Act, chapter 36.70A RCW, or a biodiversity area and corridor identified by the Washington state Department of Fish and Wildlife's priority habitats and species project as of the date of the application as identified by King County or local or state jurisdiction or by expert verification acceptable to the department or local jurisdiction. Property consisting mainly of disturbed or fragmented open space determined by the department to have minimal wildlife habitat significance is ineligible for this category;</p> <p>((18-))17. Surface water quality buffer – five, eight, or ten total points. "Surface water quality buffer" means an undisturbed area that has a plant community in which native plants are dominant abutting a lake, pond, stream, shoreline, wetland, or marine waters on or abutting the property, that provides buffers beyond that required by any applicable regulation. To receive five points, the buffer shall be at least fifty percent wider than the buffer required by any applicable regulation. To receive eight points, the buffer shall be at least two times the required width. To receive ten points, the buffer shall be at least three times the required width. The qualifying buffer shall be longer than twenty-five feet and shall be preserved from clearing or maintenance, unless this area is part of a department-approved ecological enhancement, farm management, forest stewardship, ((rural stewardship,)) or resource restoration plan. Grazing use by livestock on such land is prohibited;</p> <p>((19-)) 18. Urban open space - five points.</p> <p>a. "Urban open space" means land located within the boundaries of a city or within the urban growth area that has a plant community in which native plants are dominant and that under the applicable zoning is eligible for more-intensive development or use. The enrolling area shall be at least one acre, or be at least one-half acre if the land meets one of the following criteria:</p> |                             |                              |                       |

| Code                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | Executive’s Proposed Change | Executive’s Intent/Rationale | Policy | <p>(1) the land conserves and enhances natural or scenic resources;</p> <p>(2) the land protects streams or water supply;</p> <p>(3) the land promotes conservation of soils, wetlands, beaches, or tidal marshes;</p> <p>(4) the land enhances the value to the public of adjacent parks, forests, wildlife preserves, nature reservations or sanctuaries, or other open space;</p> <p>(5) the land enhances recreation opportunities for the general public; or</p> <p>(6) the land preserves visual quality along highways, roads, and streets or scenic vistas.</p> <p>b. Owners of noncontiguous properties that together meet the minimum acreage requirement may jointly apply under this category if each property is closer than seventy-five feet to one other property in the application and if each property contains an enrolling open space area at least as large as the minimum zoned lot size; and</p> <p>((20-)) 19. Watershed protection area - five points. "Watershed protection area" means property contributing to the forest cover that provides run-off reduction and groundwater protection. The property shall consist of contiguous native forest or be in the process of reforestation. The enrolling forested area shall consist of additional forest cover beyond that required by county or applicable local government regulation and shall be at least one acre or sixty-five percent of the property acreage, whichever is greater. If reforestation or improvements to the forest health are necessary, the property owner shall provide and implement an ecological enhancement, a forest stewardship, or resource restoration((, or rural stewardship)) plan that addresses this need and is acceptable to the department.</p> <p>D. Property qualifying for an open space category in subsection C. of this section may receive credit for additional points as follows:</p> <p>1. Conservation easement or historic preservation easement - eighteen points. "Conservation easement or historic preservation easement" means land on which an easement is voluntarily placed that restricts, in perpetuity, further potential development or other uses of the property. The easement is subject to approval by the department and shall be recorded with the King County recorder's office or its successor. The easement shall be conveyed to the county or to an organization acceptable to the department, such as a land trust or conservancy. Historic preservation easements are subject to approval by the historic preservation officer of King County or of the local government jurisdiction in which the property is located. An easement required by zoning, subdivision conditions, or other land use regulation is not eligible unless an additional substantive easement area is provided beyond that otherwise required;</p> <p>2. Contiguous parcels under separate ownership - two points.</p> <p>a. "Contiguous parcels under separate ownership" means at least two or more parcels under different ownership where either:</p> <p>(1) the enrolling parcels and open space acreage abut each other without a significant human-made barrier separating them; or</p> <p>(2) the enrolling parcels do not abut each other, but abut a publicly owned open space, without a significant human-made barrier separating the publicly owned open space and the open space portion of the parcels seeking open space classification.</p> <p>b. Award of this category requires a single application by multiple owners and parcels with identical qualifying public benefit rating system resources. Only a single application fee is required.</p> <p>c. Contiguous parcels of land with the same qualifying public benefit rating system resources are eligible for treatment as a single parcel if open space classification is sought under the same application except as otherwise prohibited by the farm and agricultural conservation land category. Each parcel need not meet the minimum acreage requirements for a resource category so long as the total area of all enrolling land combined meets any required minimum acreage requirements. The owners of each parcel included in the application shall agree to identical terms and conditions for enrollment in the program.</p> <p>d. Individual parcels or portions of parcels may be withdrawn or removed from open space classification, consistent with all applicable rules and regulations. The continued eligibility of all parcels and associated acreage remaining in open space classification accepted under the same application is dependent upon the continued qualification for a resource category or categories.</p> <p>e. Points are awarded for each participating owner above one owner and accrue to all owners of a single application. The withdrawal or removal of all enrolled acreage associated with an owner results in the loss of two points for each remaining owner;</p> <p>3. Easement and access – thirty-five points. "Easement and access" means that the property has at least one qualifying open space resource, unlimited public access or limited public access due to resource sensitivity, and a conservation easement or historic preservation easement in perpetuity in a form and with conditions acceptable to the department. A property shall only be eligible in this category if it receives credit for an open space category and for the conservation easement or historic easement in perpetuity category. The owner shall agree to allow public access to the portion of the property designated for public access in the easement. An easement required by zoning, subdivision conditions, or other land use regulation is not eligible, unless there is additional easement area beyond that required. Credit for this category may not overlap with the equestrian-pedestrian-bicycle trail linkage;</p> |                             |                              |                       |

| Code                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | Executive's Proposed Change                     | Executive's Intent/Rationale                                           | Policy Staff Comments                                                                                                                                                                                                                                                                                                                                                                                                    |

| <p>4. Public access - points depend on type and frequency of access allowed. "Public access " means the general public is allowed access on an ongoing basis for uses such as recreation, education, or training. Access shall be allowed on the portion of the property that is designated for public access. The landowner may impose reasonable restrictions on access, such as limiting use to daylight hours, agreed to by the department. No physical barriers may limit reasonable public access or negatively affect an open space resource. A property owner shall demonstrate that the property is open to public access and is used by the public. Award of public access points for historic (<del>((properties))</del>) <u>properties</u> is subject to approval by the historic preservation officer of King County or a certified officer of another local government jurisdiction in which the property is located. The property owner may be required to furnish and maintain signage according to county specifications.</p> <p>a. Unlimited public access - five points. Year-round access by the general public is allowed without special arrangements with the property owner.</p> <p>b. Limited public access (<del>((because of))</del>) <u>due to</u> resource sensitivity - five points. Access may be reasonably limited by the property owner due to the sensitive nature of the resource, with access provided only to appropriate user groups. The access allowed should generally be for an educational, scientific, or research purpose and may require special arrangements with the owner.</p> <p>c. Seasonally limited public access - three points. Access by the public is allowed only for part of the year due to due to seasonal conditions, as mutually agreed to by the landowner and the department.</p> <p>d. Environmental education access - three points. The landowner enters into an agreement with a school, with an organization with 26 U.S.C. Sec. 501(c)(3) tax status, or, with the agreement of the department, with another community organization that allows membership by the general public to provide environmental education to its members or the public at large. The department shall verify that the enrolled portion of the property has value for environmental education purposes.</p> <p>e. None or members-only - zero points. No public access is allowed or the access is allowed only by members of the organization using or owning the land; and</p> <p>5. Resource restoration – five points. "Resource restoration" means restoration of an enrolling area of property benefiting an area in an open space resource category. Emphasis is placed on the restoration of native vegetation associated with anadromous fish rearing habitat, riparian zones, migration corridors and wildlife, forest, stream, and wetland habitats. The owner shall provide and implement a restoration plan approved by the department. The plan may be developed in cooperation with a natural resource expert or agency. The approved restoration plan shall, at a minimum, include a purpose statement, a description of restoration work to be done, a detailed site map of the area to be restored, a specific timeline for the restoration activities to be completed and a monitoring schedule for the restoration project's first five years. Historic resource restoration is subject to approval by the King County historic preservation officer or officer of another certified local government in the jurisdiction in which the property is located and shall be accompanied by a long-term maintenance plan. The owner shall also provide to the department a yearly monitoring report for at least five years following enrollment in the public benefit rating system program. The report shall describe the progress and success of the restoration project and shall include photographs to document the success. Land receiving credit for this category may not receive credit for the ecological enhancement land(<del>((;))</del>) <u>or</u> forest stewardship land(<del>((; or rural stewardship land))</del>) categories.</p> |                                                 |                                                                        |                                                                                                                                                                                                                                                                                                                                                                                                                          |

The shoreline management goals and policies constitute the official policy of King County regarding areas of the county subject to shoreline jurisdiction under chapter 90.58 RCW. As provided by WAC 173-26-191(2)(a), King County's local administrative, enforcement, and permit review procedures shall conform to chapter 90.58 RCW but shall not be a part of the <u>shoreline</u> master program.</p> <p>C. Amendments to the shoreline master program do not apply to the shoreline jurisdiction until approved by the Washington state Department of Ecology as provided in RCW 90.58.090. The department of local services, permitting division, shall, within ten days after the date of the Department of Ecology's approval, file a copy of the Department of Ecology's approval, in the form of an electronic copy, with the clerk of the council, who shall retain the original and provide electronic copies to all councilmembers, the chief of staff, and the lead staff of the local services and land use committee, or its successor.</p> |                                                                                                            |                                                                                                                                                  |                                                                                                                                                                                                                                                                                                                                                                                                              |
| <p><b>K.C.C. 21A.25.100 - Shoreline use allowances within each shoreline environment.</b></p> <p><u>SECTION 78.</u> Ordinance 16958, Section 31, as amended, and K.C.C. 21A.25.100 are hereby amended to read as follows:</p> <p>A. The shoreline use table in this section determines whether a specific use is allowed within each of the shoreline environments. The shoreline environment is located on the vertical column and the specific use is located on the horizontal row of the table. The specific uses are grouped by the shoreline use categories in WAC 173-26-241. The specific uses are defined by those uses in K.C.C. chapter 21A.08. The table should be interpreted as follows:</p> <p>1. If the cell is blank in the box at the intersection of the column and the row, the use is prohibited in that shoreline environment;</p> <p>2. If the letter "P" appears in the box at the intersection of the column and the row, the use may be allowed within the shoreline environment;</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | <p>(1) Technical corrections<br/>(2) Changes references of "aquatic area buffers" to "riparian areas."</p> | <p>(1) Corrects various grammatical, formatting, and errors.<br/>(2) Changes are proposed throughout the code to change term or reference to</p> | <p><i>Section Notes:</i></p> <ul style="list-style-type: none"><li>• This section identifies what uses are allowed, conditional, or not allowed within each shoreline environmental designation in the shoreline jurisdiction.</li></ul> <p><i>Policy Analysis:</i></p> <ul style="list-style-type: none"><li>• Although <b>residential development</b> is identified as allowed in some shoreline</li></ul> |

| Code                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |                |             |       |             |          |          |         |         | Executive’s Proposed Change | Executive’s Intent/Rationale                                                                        | Policy Staff Comments                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------|-------------|-------|-------------|----------|----------|---------|---------|-----------------------------|-----------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <p>3. If the letter "C" appears in the box at the intersection of the column and the row, the use may be allowed within the shoreline environment subject to the shoreline conditional use review procedures specified in K.C.C. 21A.44.100;</p> <p>4. If a number appears in the box at the intersection of the column and the row, the use may be allowed subject to the appropriate review process in this section, the general requirements of this chapter and the specific development conditions indicated with the corresponding number in subsection C. of this section. If more than one number appears after a letter, all numbers apply;</p> <p>5. If more than one letter-number combination appears in the box at the intersection of the column and the row, the use is allowed in accordance with each letter-number combination;</p> <p>6. A shoreline use may be allowed in the aquatic environment only if that shoreline use is allowed in the adjacent shoreland environment; and</p> <p>7. This section does not authorize a land use that is not allowed by the underlying zoning, but may add additional restrictions or conditions or prohibit specific land uses within the shoreline jurisdiction. When there is a conflict between the allowed land uses in K.C.C. chapter 21A.08 and shoreline uses in this section, preference for shoreline uses shall first be given to water-dependent uses, then to water related uses, and finally to water enjoyment uses. All uses in the shoreline jurisdiction shall comply with all relevant county code provisions and with the King County ((S))shoreline ((M))master ((P))program.</p> <p>B. Shoreline uses.</p> |                |             |       |             |          |          |         |         |                             | "aquatic area buffers" to "riparian areas," where appropriate, consistent with current terminology. | <p>environments, it is not allowed in riparian areas under the critical area alterations table in <a href="#">K.C.C. 21A.24.045 (page 15)</a>. There is extensive, but not necessarily complete, overlap between Type S riparian areas and the shoreline jurisdiction.</p> <p>Increases to the riparian area widths under <a href="#">K.C.C. 21A.24.358 (page 73)</a> could mean that residential properties are entirely within a riparian area. New residential development is allowed in <b>some shoreline environmental designations</b> but <i>not</i> allowed in <a href="#">riparian areas (page 15)</a>. Increases to riparian area widths may result in more situations of reasonable use exceptions, critical area alteration exceptions, or denial of residential development. Reasonable use exceptions are processed as a shoreline variance in the shoreline jurisdiction. A shoreline variance requires approval by the Department of Ecology.</p> <p>How to address residential development that is both in the shoreline jurisdiction and subject to the critical area regulations is a policy choice.</p> |

| 1. In the ((N))natural shoreline environment, limited to low intensity agriculture, such as livestock use with an animal unit density of no more than one per two acres in the shoreline jurisdiction, seasonal hay mowing and related activities, and horticulture not to exceed twenty percent of the site area located within the shoreline jurisdiction.                                                                                                                                                             |     |     |     |     |     |     |     |     |                             |                              |                       |
| 2.a. The supporting infrastructure for aquaculture may be located landward of the aquaculture operation, subject to the limitations of K.C.C. Title 21A.                                                                                                                                                                                                                                                                                                                                                                 |     |     |     |     |     |     |     |     |                             |                              |                       |
| b. The aquaculture operation shall meet the standards in K.C.C. 21A.25.110.                                                                                                                                                                                                                                                                                                                                                                                                                                              |     |     |     |     |     |     |     |     |                             |                              |                       |
| c. In aquatic areas adjacent to the residential shoreline environment, net pen facilities shall be located no closer than one thousand five hundred feet from the ordinary high water mark of this environment, unless the department allows a specific lesser distance that it determines is appropriate based upon a visual impact analysis. Other types of floating culture facilities may be located within one thousand five hundred feet of the ordinary high water mark if supported by a visual impact analysis. |     |     |     |     |     |     |     |     |                             |                              |                       |
| d. In aquatic areas adjacent to the rural shoreline environment, net pen facilities shall be located no closer than one thousand five hundred feet from the ordinary high water mark of this environment, unless the department allows a specific lesser distance that it determines is appropriate based upon a visual impact analysis.                                                                                                                                                                                 |     |     |     |     |     |     |     |     |                             |                              |                       |
| e. In the natural shoreline environment and aquatic areas adjacent to the natural shoreline environment, commercial net pens are prohibited, and other aquaculture activities are limited to activities that do not require structures, facilities, or mechanized harvest practices and that will not alter the natural systems, features, or character of the site.                                                                                                                                                     |     |     |     |     |     |     |     |     |                             |                              |                       |
| f. Farm-raised geoduck aquaculture requires a shoreline substantial development permit if a specific project or practice causes substantial interference with normal public use of the surface waters.                                                                                                                                                                                                                                                                                                                   |     |     |     |     |     |     |     |     |                             |                              |                       |
| g. A conditional use permit is required for new commercial geoduck aquaculture only, consistent with WAC 173-26-241(3)(b). All subsequent cycles of planting and harvest shall not require a new conditional permit.                                                                                                                                                                                                                                                                                                     |     |     |     |     |     |     |     |     |                             |                              |                       |
| 3.a. New marinas are not allowed along the east shore of Vashon-Maury Island, from Piner Point to Point Robinson.                                                                                                                                                                                                                                                                                                                                                                                                        |     |     |     |     |     |     |     |     |                             |                              |                       |
| b. Marinas shall meet the standards in K.C.C. 21A.25.120.                                                                                                                                                                                                                                                                                                                                                                                                                                                                |     |     |     |     |     |     |     |     |                             |                              |                       |
| 4. Water dependent general services land uses in K.C.C. 21A.08.050 are allowed. Nonwater-dependent general services land uses in K.C.C. 21A.08.050 are only allowed on sites that are not contiguous with the ordinary high water mark or on sites that do not have an easement that provides direct access to the water.                                                                                                                                                                                                |     |     |     |     |     |     |     |     |                             |                              |                       |
| 5.a. Water-dependent general services land uses in K.C.C. 21A.08.050 are allowed.                                                                                                                                                                                                                                                                                                                                                                                                                                        |     |     |     |     |     |     |     |     |                             |                              |                       |
| b. Nonwater-dependent general services land uses in K.C.C. 21A.08.050 are only allowed as part of a shoreline mixed-use development that includes water-dependent uses.                                                                                                                                                                                                                                                                                                                                                  |     |     |     |     |     |     |     |     |                             |                              |                       |
| c. Nonwater-oriented general service((s)) land uses shall provide a ((significant)) public benefit by ((helping to achieve)) achieving one or more of the following shoreline master program goals:                                                                                                                                                                                                                                                                                                                      |     |     |     |     |     |     |     |     |                             |                              |                       |

| Code                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | Executive’s Proposed Change | Executive’s Intent/Rationale | Policy Staff Comments |

| <p>(1) economic development for water-dependent uses;<br/>(2) public access;<br/>(3) water-oriented recreation;<br/>(4) conservation of critical areas, scenic vistas, aesthetics, or fish and wildlife habitat; <del>((and))</del> or<br/>(5) protection and restoration of historic properties.</p> <p>6. Water-dependent business services uses in K.C.C. 21A.08.050 are allowed. Water-related business service((s)) uses are only allowed as part of a shoreline mixed-use development and only if they support a water-dependent use. The water-related business service((s)) uses shall comprise less than one-half of the square footage of the structures or the portion of the site within the shoreline jurisdiction.</p> <p>7.a. Water-dependent retail uses in K.C.C. 21A.08.050 are allowed.</p> <p>b. Nonwater-dependent retail uses in K.C.C. 21A.08.050 are only allowed as part of a shoreline mixed-use development if the nonwater-dependent retail use supports a water-dependent use. Nonwater-dependent uses shall comprise less than one-half of the square footage of the structures or the portion of the site within the shoreline jurisdiction.</p> <p>c. Nonwater-oriented retail uses shall provide a significant public benefit by helping to achieve one or more of the following shoreline master program goals:</p> <p>(1) economic development for water-dependent uses;<br/>(2) public access;<br/>(3) water-oriented recreation;<br/>(4) conservation of critical areas, scenic vistas, aesthetics, or fish and wildlife habitat; and<br/>(5) protection and restoration of historic properties.</p> <p>8. Water-dependent retail uses in K.C.C. 21A.08.050 are allowed. Nonwater-dependent retail uses in K.C.C. 21A.08.050 are only allowed if the retail use provides a significant public benefit by helping to achieve one or more of the following shoreline master program goals:</p> <p>a. economic development for water-dependent uses;<br/>b. public access;<br/>c. water-oriented recreation;<br/>d. conservation of critical areas, scenic vistas, aesthetics, or fish and wildlife habitat; and<br/>e. protection and restoration of historic properties.</p> <p>9.a. Water-dependent government services in K.C.C. 21A.08.060 are allowed.</p> <p>b. Nonwater-dependent government services in K.C.C. 21A.08.060 are only allowed as part of a shoreline mixed-use development if the nonwater-dependent government use supports a water-dependent use. Nonwater-dependent uses shall comprise less than one-half of the square footage of the structures or the portion of the site within the shoreline jurisdiction. Only low-intensity water-dependent government services are allowed in the <del>((N))</del>natural environment.</p> <p>10. The following standards apply to government services uses within the <del>((A))</del>aquatic environment:</p> <p>a. Stormwater and sewage outfalls are allowed if upland treatment and infiltration to groundwater, streams, or wetlands is not feasible and there is no impact on critical saltwater habitats, salmon migratory habitat, and the nearshore zone. However, stormwater and sewage outfalls are not allowed in the Maury Island Aquatic Reserve, except from Piner Point to Point Robinson;</p> <p>b. Water intakes shall not be located near fish spawning, migratory, or rearing areas. Water intakes shall adhere to Washington state Department of Fish and Wildlife fish screening criteria. To the maximum extent practical, intakes should be placed at least thirty feet below the ordinary high water mark;</p> <p>c. Desalinization facilities shall not be located near fish spawning, migratory, or rearing areas. Intakes should generally be placed deeper than thirty feet below the ordinary high water mark and shall adhere to Washington state Department Fish and Wildlife fish screening criteria. Discharge of desalination wastewater or concentrated mineral is not allowed in the Maury Island Aquatic Reserve, except that outside the Inner and Outer Harbormaster Harbor, discharge may be considered if there is no impact on critical saltwater habitats, salmon migratory habitat, and the nearshore zone;</p> <p>d. <del>((C))</del>cable crossings for telecommunications and power lines shall:</p> <p>(1) be routed around or drilled below aquatic critical habitat or species;<br/>(2) be installed in sites free of vegetation, as determined by physical or video seabed survey;<br/>(3) be buried, preferably using directional drilling, from the uplands to waterward of the deepest documented occurrence of native aquatic vegetation; and</p> |                             |                              |                       |

| <p>c. shall avoid and mitigate adverse impacts to the shoreline environment during the course of mining and reclamation to achieve no net loss of shoreline ecological function. In determining whether there will be no net loss of shoreline ecological function, the evaluation may be based on the final reclamation required for the site. Preference shall be given to mining proposals that result in the creation, restoration, or enhancement of habitat for priority species;</p> <p>d. shall provide for reclamation of disturbed shoreline areas to achieve appropriate ecological functions consistent with the setting;</p> <p>e. may be allowed within the active channel of a river only as follows:</p> <p>(1) removal of specified quantities of sand and gravel or other materials at specific locations will not adversely affect the natural processes of gravel transportation for the river system as a whole;</p> <p>(2) the mining and any associated permitted activities will not have significant adverse impacts to habitat for priority species nor cause a net loss of ecological functions of the shoreline; and</p> <p>(3) if no review has been previously conducted under this subsection C.17.e., before renewing, extending, or reauthorizing gravel bar and other in-channel mining operations in locations where they have previously been conducted, the department shall require compliance with this subsection C.17.e. If there has been prior review, the department shall review previous determinations comparable to the requirements of this section C.17.e. to ensure compliance with this subsection under current site conditions; and</p> <p>f. shall comply with K.C.C. 21A.25.190.</p> <p>18. Only water-dependent recreational uses are allowed, except for public parks and trails, in the <del>((H))</del>high <del>((H))</del>intensity <u>shoreline</u> environment and shall meet the standards in K.C.C. 21A.25.140 for public access and K.C.C. 21A.25.150 for recreation.</p> <p>19. Water-dependent and water-enjoyment recreational uses are allowed in the <del>((R))</del>residential, <del>((R))</del>rural, and <del>((F))</del>forestry <u>shoreline</u> environments and shall meet the standards in K.C.C. 21A.25.140 for public access and K.C.C. 21A.25.150 for recreation.</p> <p>20. In the <del>((C))</del>conservancy <u>shoreline</u> environment, only the following recreation uses are allowed and shall meet the standards in K.C.C. 21A.25.140 for public access and K.C.C. 21A.25.150 for recreation:</p> <p>a. parks; and</p> <p>b. trails.</p> <p>21. In the <del>((N))</del>natural <u>shoreline</u> environment, only passive and low-impact recreational uses are allowed.</p> <p>22. Single detached residences shall be located outside of the <del>((aquatic area buffer))</del> <u>riparian area</u> and set back from the ordinary high water mark to the maximum extent practical.</p> <p>23. Only allowed as part of a water-dependent shoreline mixed-use development where water-dependent uses comprise more than half of the square footage of the structures on the portion of the site within the shoreline jurisdiction.</p> <p>24. Residential accessory uses shall meet the following standards:</p> <p>a. docks, piers, moorage, buoys, floats, or launching facilities shall comply with the standards in K.C.C. 21A.25.180;</p> <p>b. residential accessory structures located within the <del>((aquatic area buffer))</del> <u>riparian area</u> shall be limited to a total footprint of one-hundred fifty square feet; and</p> <p>c. accessory structures shall be sited to preserve visual access to the shoreline to the maximum extent practical.</p> <p>25. New highway and street construction is allowed only if there is no feasible alternate location. Only low-intensity transportation infrastructure is allowed in the <del>((N))</del>natural environment.</p> <p>26. Utility facilities are subject to the standards in K.C.C. 21A.25.260.</p> <p>27. Only bed and breakfast guesthouses.</p> <p>28. Only in a marina.</p> <p>29. Transportation facilities are subject to the standards in K.C.C. 21A.25.280.</p> <p>30. Only solid waste transfer stations and subject to K.C.C. 21A.25.260.</p> |                                                                                                                                      |                                                                                                                                         |                                                                                                        |
| <p><b>K.C.C. 21A.25.110 - Development regulations for aquaculture facilities in shoreline environments.</b></p> <p><u>SECTION 79.</u> Ordinance 16985, Section 32, as amended, and K.C.C. 21A.25.110 are hereby amended to read as follows:<br/>An applicant for an aquaculture facility shall use the sequential measures in K.C.C. 21A.25.080. The following standards apply to aquaculture:</p> <p>A. Unless the applicant demonstrates that the substrate modification will result in an increase in native habitat diversity, aquaculture that involves little or no substrate modification shall be given preference over aquaculture that involves substantial substrate modification and the degree of proposed substrate modification shall be limited to the maximum extent practical.</p> <p>B. The installation of submerged structures, intertidal structures and floating structures shall be limited to the maximum extent</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | <p>(1) Adds "critical freshwater" term, where applicable, alongside "critical saltwater" term.</p> <p>(2) Technical corrections.</p> | <p>(1) Update aligns with Shoreline Management Act (SMA) guidance.</p> <p>(2) Corrects various grammatical, formatting, and errors.</p> | <p><i>Policy Analysis:</i></p> <ul style="list-style-type: none"><li>• No issues identified.</li></ul> |

| <p>practical.</p> <p>C. Aquaculture proposals that involve substantial substrate modification or sedimentation through dredging, trenching, digging, mechanical clam harvesting, or other similar mechanisms, shall not be allowed in areas where the proposal would adversely impact critical saltwater or critical freshwater habitats.</p> <p>D. Aquaculture activities that after implementation of mitigation measures would have a significant adverse impact on natural, dynamic shoreline processes, or that would result in a net loss of shoreline ecological functions shall be prohibited.</p> <p>E. Aquaculture should not be located in areas that will result in significant conflicts with navigation or other water-dependent uses.</p> <p>F. Aquaculture facilities shall be designed, located, and managed to prevent the spread of diseases to native aquatic life or the spread of new nonnative species.</p> <p>G. Aquaculture practices shall be designed to minimize use of artificial chemical substances and shall use chemical compounds that are least persistent and have the least impact on plants and animals. Herbicides and pesticides shall be used only in conformance with state and federal standards and to the minimum extent needed for the health of the aquaculture activity.</p> <p>H. Noncommercial native salmon net pen facilities that involve minimal supplemental feeding and limited use of chemicals or antibiotics as provided in subsection G. of this section may be located in King County marine waters if they are consistent with subsections S. and Y. of this section and are:</p> <p>1. Native salmon net pens operated by Indian tribes with treaty fishing rights;</p> <p>2. For the limited penned cultivation of wild salmon stocks during a limited portion of their lifecycle to enhance restoration of native stocks; or</p> <p>3. For rearing to adulthood in order to harvest eggs as part of a captive brood stock recovery program for endangered species.</p> <p>I. If uncertainty exists regarding potential impacts of a proposed aquaculture activity and for all experimental aquaculture activities, unless otherwise provided for, the department may require baseline and periodic operational monitoring by a county-approved consultant, at the applicant's expense, and shall continue until adequate information is available to determine the success of the project and the magnitude of any probable ((significant)) adverse environmental impacts. Permits for such activities shall include specific performance measures and provisions for adjustment or termination of the project at any time if monitoring indicates ((significant)) adverse environmental impacts that cannot be adequately mitigated.</p> <p>J. Aquaculture developments approved on an experimental basis shall not exceed five acres in area, except land-based projects and anchorage for floating systems, and three years in duration. The department may issue a new permit to continue an experimental project as many times as it determines is necessary and appropriate.</p> <p>K. The department may require aquaculture operations to carry liability insurance in an amount commensurate with the risk of injury or damage to any person or property as a result of the project. Insurance requirements shall not be required to duplicate requirements of other agencies.</p> <p>L. If aquaculture activities are authorized to use public facilities, such as boat launches or docks, King County may require the applicant to pay a portion of the cost of maintenance and any required improvements commensurate with the use of those facilities.</p> <p>M. New aquatic species that are not previously cultivated in Washington state shall not be introduced into King County saltwaters or freshwaters without prior written approval of the Director of the Washington state Department of Fish and Wildlife and the Director of the Washington state Department of Health. This prohibition does not apply to((?)) Pacific, Olympia, Kumomoto, Belon, or Virginica oysters; Manila, Butter, or Littleneck clams; or Geoduck clams.</p> <p>N. Unless otherwise provided in the shoreline permit issued by the department, repeated introduction of an approved organism after harvest in the same location shall require approval by the county only at the time the initial aquaculture use permit is issued. Introduction, for purposes of this section, shall mean the placing of any aquatic organism in any area within the waters of King County regardless of whether it is a native or resident organism within the county and regardless of whether it is being transferred from within or without the waters of King County.</p> <p>O. For aquaculture projects, overwater structures shall be allowed only if necessary for the immediate and regular operation of the facility. Overwater structures shall be limited to the storage of necessary tools and apparatus in containers of not more than three feet in height, as measured from the surface of the raft or dock.</p> <p>P. Except for the sorting or culling of the cultured organism after harvest and the washing or removal of surface materials or organisms before or after harvest, no processing of any aquaculture product shall occur in or over the water unless specifically approved by permit. All other processing and processing facilities shall be located landward of the ordinary high water mark.</p> <p>Q. Aquaculture wastes shall be disposed of in a manner that will ensure strict compliance with all applicable governmental waste</p> | <p>(3) Adds "Indian" to tribes.</p> | <p>(3) Updates to use current terminology.</p> |                       |

| Code                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | Executive’s Proposed Change | Executive’s Intent/Rationale | Policy Staff Comments |
|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------|------------------------------|-----------------------|
| <p>disposal standards, including, but not limited to, the Federal Clean Water Act, Section 401, and chapter 90.48 RCW, Water Pollution Control. No garbage, wastes, or debris shall be allowed to accumulate at the site of any aquaculture operation.</p> <p>R. Unless approved in writing by the National Marine Fisheries Service or the U.S. Fish and Wildlife Service, predator control shall not involve the killing or harassment of birds or mammals. Approved controls include, but are not limited to, double netting for seals, overhead netting for birds, and three-foot high fencing or netting for otters. The use of other nonlethal, nonabusive predator control measures shall be contingent upon receipt of written approval from the National Marine Fisheries Service or the U.S. Fish and Wildlife Service, as required.</p> <p>S. Finfish net pens and rafts shall meet the following criteria in addition to the other applicable regulations of this section:</p> <p>1. Finfish net pens shall not be located in Quartermaster Harbor. For the purposes of this subsection, "Quartermaster Harbor" means the area of Puget Sound north of a straight line drawn from the southwest tip of Vashon-Maury Island, which is Piner Point, to the southeast tip of Vashon-Maury Island, which is Neill Point;</p> <p>2. Finfish net pens shall meet, at a minimum, state approved administrative guidelines for the management of net pen cultures. In the event there is a conflict in requirements, the more restrictive requirement shall prevail;</p> <p>3. Finfish net pens shall not occupy more than two surface acres of water area, excluding booming and anchoring requirements. Anchors that minimize disturbance to substrate, such as helical anchors, shall be employed. Such operations shall not use chemicals or antibiotics;</p> <p>4. Aquaculture proposals that include new or added net pens or rafts shall not be located closer than one nautical mile to any other aquaculture facility that includes net pens or rafts. The department may authorize a lesser distance if the applicant demonstrates to the satisfaction of the department that the proposal will be consistent with the environmental and aesthetic policies and objectives of this chapter and the shoreline master program. The applicant shall demonstrate to the satisfaction of the department that the cumulative impacts of existing and proposed operations would not be contrary to the policies and regulations of the program;</p> <p>5. Net cleaning activities shall be conducted on a frequent enough basis so as not to violate state water quality standards. When feasible, the cleaning of nets and other apparatus shall be accomplished by air drying, spray washing, or hand washing; and</p> <p>6. In the event of a significant fish kill at the site of a net pen facility, the finfish aquaculture operator shall submit a timely report to public health – Seattle &amp; King County, environmental health division, and the department of <u>local services, permitting division</u>, stating the cause of death and shall detail remedial actions to be implemented to prevent reoccurrence.</p> <p>T. All floating and submerged aquaculture structures and facilities in navigable waters shall be marked in accordance with United States Coast Guard requirements.</p> <p>U. The rights of treaty tribes to aquatic resources within their usual and accustomed areas shall be addressed through direct coordination between the applicant and the affected <u>Indian</u> tribes through the permit review process.</p> <p>V. Aquaculture structures and equipment shall be of sound construction and shall be so maintained. Abandoned or unsafe structures and equipment shall be removed or repaired promptly by the owner. Where any structure might constitute a potential hazard to the public in the future, the department shall require the posting of a bond commensurate with the cost of removal or repair. The department may abate an abandoned or unsafe structure in accordance with K.C.C. Title 23.</p> <p>W. Aquaculture shall not be approved where it will adversely impact eelgrass and macroalgae.</p> <p>X. Commercial salmon net pens and nonnative marine finfish aquaculture are prohibited.</p> <p>Y. Finfish net pens shall be consistent with the applicable aquaculture regulations in this section and shall meet the following criteria and requirements:</p> <p>1. Each finfish net pen application shall provide a current, peer-reviewed science review of environmental issues related to finfish net pen aquaculture;</p> <p>2. The department shall only approve a finfish net pen application if the department determines the scientific review demonstrates:</p> <p>a. that the project construction and activities will achieve no net loss of ecological function in a manner that has no <del>((significant))</del> adverse short-term impact and no documented adverse long-term impact to applicable elements of the environment, including, but not limited to, habitat for native salmonids, water quality, <u>critical saltwater or critical freshwater habitat</u>, eel grass beds, other aquaculture, other native species, the benthic community below the net pen or other environmental attributes; and</p> <p>b. that the finfish net pen does not involve significant risk of cumulative adverse effects, including, but not limited to, risk of interbreeding with wild salmon or reduction of genetic fitness of wild stocks, parasite or disease transmission, or other adverse effects on native species or threatened or endangered species and their habitats;</p> <p>3. The department's review shall:</p> |                             |                              |                       |

| Code                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | Executive’s Proposed Change                                                                                                          | Executive’s Intent/Rationale                                                                                                    | Policy Staff Comments                                                                                                                                                                              |
|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <p>a. include an assessment of the risk to endangered species, non-endangered species, and other biota that could be affected by the finfish net pen; and</p> <p>b. evaluate and model water quality impacts utilizing current information, technology, and assessment models. The project proponent shall be financially responsible for this water quality assessment;</p> <p>4. Finfish net pens shall be designed, constructed and maintained to prevent escapement of fish in all foreseeable circumstances, including, but not limited to, tide, wind and wave events of record, floating and submerged debris, and tidal action;</p> <p>5. Finfish net pens shall not be located:</p> <p>a. within three hundred feet of an area containing eelgrass or a kelp bed;</p> <p>b. within one thousand five hundred feet of an ordinary high water mark; or</p> <p>c. in a designated Washington state Department of Natural Resources aquatic reserve;</p> <p>6. A finfish net pen may not be used to mitigate the impact of a development proposal; and</p> <p>7. For finfish net pens that are not noncommercial native salmon net pens, the conditional use permit for the net pen shall be renewed every five years. An updated scientific review shall be conducted as part of the renewal and shall include a new risk assessment and evaluation of the impact of the operation of the finfish net pen during the previous five years.</p> <p>Z. Geoduck aquaculture shall be consistent with WAC 173-26-241(3)(b).</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |                                                                                                                                      |                                                                                                                                 |                                                                                                                                                                                                    |
| <p><b>K.C.C. 21A.25.150 -Recreational development standards within shoreline environments.</b></p> <p><u>SECTION 80.</u> Ordinance 3688, Section 415, as amended, and K.C.C. 21A.25.150 are hereby amended to read as follows:<br/>Recreational development must meet the following standards:</p> <p>A. The recreational development must be permitted in the underlying zone;</p> <p>B. Recreational uses in the ((N))<u>natural shoreline</u> environment must be water-oriented;</p> <p>C. Swimming areas shall be separated from boat launch areas and marinas, to the maximum extent practical;</p> <p>D. The development of underwater sites for sport diving shall not:</p> <p>1. Take place at depths of greater than eighty feet;</p> <p>2. Constitute a navigational hazard; and</p> <p>3. Be located in areas where the normal waterborne traffic would constitute a hazard to those people who may use such a site;</p> <p>E. The construction of swimming facilities, docks, piers, moorages, buoys, floats, and launching facilities below the ordinary high water mark shall be governed by the regulations relating to docks, piers, moorage, buoys, floats, or launching facility construction in K.C.C. 21A.25.180;</p> <p>F. Public boat launching facilities or marinas shall be governed by K.C.C. 21A.25.120;</p> <p>G. Campgrounds in the ((N))<u>natural shoreline</u> environment shall meet the following conditions:</p> <p>1. Campsites shall be located outside the shoreline jurisdiction if possible, and if not, be located outside of critical area((s)) buffers;</p> <p>2. Restrooms and parking shall be located outside the shoreline jurisdiction; and</p> <p>3. Removal of vegetation shall be limited to the maximum extent practical;</p> <p>H. Public contact with unique and fragile areas shall be permitted where it is possible without destroying the natural character of the area;</p> <p>I. Water viewing, nature study, recording, and viewing shall be accommodated by open space, platforms, benches or shelter, consistent with public safety and security;</p> <p>J. Public recreation shall be provided on county-owned lands consistent with this chapter unless the director determines public recreation is not compatible with other uses on the site or will create a public safety risk; and</p> <p>K. To the maximum extent practical, proposals for non water oriented active recreation facilities shall be located outside of the shoreline jurisdiction and shall not be permitted where the non water oriented active recreation facility would have an adverse impact on critical saltwater or critical freshwater habitats.</p> | <p>(1) Adds "critical freshwater" term, where applicable, alongside "critical saltwater" term.</p> <p>(2) Technical corrections.</p> | <p>(1) Update aligns with SMA guidance.</p> <p>(2) Various grammatical, formatting, and correction of existing code errors.</p> | <p><i>Policy Analysis:</i></p> <ul style="list-style-type: none"><li>• No issues identified.</li></ul>                                                                                             |
| <p><b>K.C.C. 21A.25.160 - Shoreline modifications allowed within shoreline environments.</b></p> <p><u>SECTION 81.</u> Ordinance 16985, Section 39, as amended, and K.C.C. 21A.25.160 are hereby amended to read as follows:</p> <p>A. The shoreline modification table in this section determines whether a specific shoreline modification is allowed within each of the shoreline environments. The shoreline environment is located on the vertical column and the specific use is located on the horizontal</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | <p>(1) Adds "critical freshwater" term, where applicable, alongside "critical saltwater" term.</p>                                   | <p>(1) Update aligns with SMA guidance.</p> <p>(2) Corrects various grammatical,</p>                                            | <p><i>Section Notes:</i></p> <ul style="list-style-type: none"><li>• This section identifies what modifications are allowed, conditionally allowed, or not allowed within each shoreline</li></ul> |

| <p>row of the table. The specific modifications are grouped by the shoreline modification categories in WAC 173-26-231. The table should be interpreted as follows:</p> <p>1. If the cell is blank in the box at the intersection of the column and the row, the modification is prohibited in that shoreline environment;</p> <p>2. If the letter "P" appears in the box at the intersection of the column and the row, the modification may be allowed within the shoreline environment;</p> <p>3. If the letter "C" appears in the box at the intersection of the column and the row, the modification may be allowed within the shoreline environment subject to the shoreline conditional use review procedures specified in K.C.C. 21A.44.100;</p> <p>4. If a number appears in the box at the intersection of the column and the row, the modification may be allowed subject to the appropriate review process indicated in this section and the specific development conditions indicated with the corresponding number immediately following the table, and only if the underlying zoning allows the modification. If more than one number appears at the intersection of the column and row, both numbers apply;</p> <p>5. If more than one letter-number combination appears in the box at the intersection of the column and the row, the modification is allowed within that shoreline environment subject to different sets of limitations or conditions depending on the review process indicated by the letter, the specific development conditions indicated in the development condition with the corresponding number immediately following the table;</p> <p>6. A shoreline modification may be allowed in the aquatic environment only if that shoreline modification is allowed in the adjacent shoreland environment; and</p> <p>7. This section does not authorize a shoreline modification that is not allowed by the underlying zoning, but may add additional restrictions or conditions or prohibit specific modifications within the shoreline jurisdiction. All shoreline modifications in the shoreline jurisdiction shall comply with all relevant county code provisions and with the King County shoreline master program.</p> <p>B. Shoreline modifications.</p> |                |             |          |             |          |          |          |          | (2) Technical corrections<br>(3) Updates term "woody debris" to "large wood." | formatting, and errors.<br>(3) Changes are proposed throughout the code to change term or reference to "woody debris" to "large wood", where appropriate, consistent with current terminology. | <p>environmental designation in the shoreline jurisdiction.</p> <p><i>Policy Analysis:</i></p> <ul style="list-style-type: none"><li>• <b>Condition 7</b> could be reorganized for clarity. Under the <a href="#">critical area alteration table (page 18)</a> in K.C.C. 21A.24.045.D.49., “habitat restoration and enhancement projects” are subject to certain standards that differ from these standards. Because there is overlap between critical areas and the shoreline jurisdiction, Council may wish to make these standards consistent where applicable.</li><li>• The proposed code does not include what components should be included in a <a href="#">restoration and enhancement plan</a>. Council may wish to clarify these requirements.</li></ul> |

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | Vegetation management                                      |       |       |       |       |       |    |    |       |                             |                              |                       |
|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | Removal of existing intact native vegetation               | P8    | P8    | P8    | P9    | P8    | P8 | P9 | P9    |                             |                              |                       |
| <p>C. Development conditions.</p> <p>1. New and replacement shoreline stabilization, including bulkheads, shall meet the standards in K.C.C. 21A.25.170;</p> <p>2.a. Flood protection facilities shall be consistent with the standards in K.C.C. chapter 21A.24, goals, objectives, guiding principles, and policies of the 2024 King County Flood Management Plan, and the Integrated ((<del>Stream</del>)) <u>Streambank</u> Protection Guidelines (Washington state ((<del>¶</del>)) Departments of Fish and Wildlife, Ecology, and Transportation, 2003). New structural flood hazard protection measures are allowed in the shoreline jurisdiction only when the applicant demonstrates by a scientific and engineering analysis that the structural measures are necessary to protect existing development, that nonstructural measures are not feasible and that the impact on ecological functions and priority species and habitats can be successfully mitigated ((<del>so as</del>)) to assure no net loss of shoreline ecological functions. New flood protection facilities designed as shoreline stabilization shall comply with the standards in K.C.C. 21A.25.170.</p> <p>b. Relocation, replacement, or expansion of existing flood control facilities within the ((<del>N</del>)) <u>natural shoreline</u> environment are allowed, subject to the requirements of the King ((<del>¶</del>)) County Flood ((<del>Hazard</del>)) Management Plan and consistent with the Washington State Aquatic Guidelines Program's Integrated Streambank Protection Guidelines and bioengineering techniques used to the maximum extent practical. New facilities would only be allowed consistent with an approved watershed resources inventory area (WRIA) salmon recovery plan under chapter 77.85 RCW.</p> <p>3. Docks, piers, moorage, buoys, floats, or launching facilities shall comply with the standards in K.C.C. 21A.25.180;</p> <p>4.a. Filling shall comply with the standards in K.C.C. 21A.25.190.</p> <p>b. A shoreline conditional use permit is required to:</p> <p>(1) Place fill waterward of the ordinary high water mark for any use except ecological restoration or for the maintenance and repair of flood protection facilities; and</p> <p>(2) Dispose of dredged material within shorelands or wetlands within a channel migration zone;</p> <p>c. ((F))<u>fill</u> shall not be placed in critical saltwater <u>or critical freshwater</u> habitats except when all ((<del>¶</del>)) the following conditions are met:</p> <p>(1) the public's need for the proposal is clearly demonstrated and the proposal is consistent with protection of the public trust, as embodied in RCW 90.58.020;</p> <p>(2) avoidance of impacts to critical saltwater <u>or critical freshwater</u> habitats by an alternative alignment or location is not feasible or would result in unreasonable and disproportionate cost to accomplish the same general purpose;</p> <p>(3) the project including any required mitigation, will result in no net loss of ecological functions associated with critical saltwater <u>or critical freshwater</u> habitats; and</p> <p>(4) the project is consistent with the state's interest in resource protection and species recovery; and</p> <p>d. In a channel migration zone, any filling shall protect shoreline ecological functions, including channel migration.</p> <p>5.a. Breakwaters, jetties, groins, and weirs:</p> |                                                            |       |       |       |       |       |    |    |       |                             |                              |                       |

| Code                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | Executive’s Proposed Change                                                                   | Executive’s Intent/Rationale                                                                                                                                                                              | Policy Staff Comments                                                                                                                                                                                                                                                                                                                                                                                                                                             |

| <p>(1) are only allowed where necessary to support water dependent uses, public access, approved shoreline stabilization, or other public uses, as determined by the director;</p> <p>(2) are not allowed in the Maury Island Aquatic Reserve except as part of a habitat restoration project or as an alternative to construction of a shoreline stabilization structure;</p> <p>(3) shall not intrude into or over critical saltwater <u>or critical freshwater</u> habitats except when all ((<del>of</del>)) the following conditions are met:</p> <p>(a) the public's need for the structure is clearly demonstrated and the proposal is consistent with protection of the public trust, as embodied in RCW 90.58.020;</p> <p>(b) avoidance of impacts to critical saltwater <u>or critical freshwater</u> habitats by an alternative alignment or location is not feasible or would result in unreasonable and disproportionate cost to accomplish the same general purpose;</p> <p>(c) the project including any required mitigation, will result in no net loss of ecological functions associated with critical saltwater <u>or critical freshwater</u> habitats; and</p> <p>(d) the project is consistent with the state's interest in resource protection and species recovery.</p> <p>b. Groins are only allowed as part of a restoration project sponsored or cosponsored by a public agency that has natural resource management as a primary function.</p> <p>c. A conditional shoreline use permit is required, except for structures installed to protect or restore shoreline ecological functions.</p> <p>6. Excavation, dredging, and filling shall comply with the standards in K.C.C. 21A.25.190. A shoreline conditional use permit is required to dispose of dredged material within shorelands, wetlands, or side channels within a channel migration zone.</p> <p><b>7.a.</b> If the department determines the primary purpose is restoration of the natural character and ecological functions of the shoreline, a shoreline habitat, and natural systems enhancement project may include shoreline modification of vegetation, removal of nonnative or invasive plants, and shoreline stabilization, including the installation of large ((<del>woody debris</del>)) <u>wood</u>, dredging, and filling. Mitigation actions identified through biological assessments required by the National Marine Fisheries Services and applied to flood hazard mitigation projects may include shoreline modifications of vegetation, removal of nonnative or invasive plants, and shoreline stabilization, including the installation of large ((<del>woody debris</del>)) <u>wood</u>, dredging, and filling.</p> <p>b. Within the urban growth area, the county may grant relief from shoreline master program development standards and use regulations resulting from shoreline restoration projects consistent with criteria and procedures in WAC 173-27-215.</p> <p>c. <u>A restoration and enhancement plan shall be prepared by an ecological professional. The plan shall include a critical functional analysis that evaluates the existing conditions and the post-project ecological and increase in functions to be achieved by the project.</u></p> <p>d. <u>An applicant for a shoreline habitat and natural systems enhancement project shall demonstrate that the proposed project will provide a net ecological benefit and increase in functions over the existing ecological and functional conditions of the habitat project area. If this requirement is satisfied, additional mitigation or restoration beyond the proposed habitat enhancement project itself may not be required. The applicant may be required to comply with the post-project monitoring and reporting conditions in K.C.C. 21A.24.130.</u></p> <p>8. Within the critical area and critical area buffer, vegetation removal is subject to K.C.C. chapter 21A.24.</p> <p>9. Except for forest practices conducted under K.C.C. 21A.25.130, existing native vegetation located outside of the critical area and critical area buffer shall be retained to the maximum extent practical. Within the critical area and critical area buffer, vegetation removal is subject to K.C.C. chapter 21A.24.</p> |                                                                                               |                                                                                                                                                                                                           |                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |                                                                                                                                                                                                                                   |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| <p><b>K.C.C. 20.44.040 - Lists categorical exemptions to SEPA review.</b></p> <p><u>SECTION 5.</u> Ordinance 6949, Section 6, as amended, and K.C.C. 20.44.040 are hereby amended to read as follows:</p> <p>A. King County adopts the standards and procedures specified in WAC 197-11-300 through 197-11-390 and 197-11-800 through 197-11-890 for determining categorical exemptions and making threshold determinations subject to the following:</p> <p>1. The following exempt threshold levels are hereby established in accordance with WAC 197-11-800(1)(c) for the exemptions in WAC 197-11-800(1)(b):</p> <p class="margin-left: 20px;">a. The construction or location of any residential structures of twenty dwelling units within the boundaries of an urban growth area, or of any residential structures of eight dwelling units outside of the boundaries of an urban growth area;</p> <p class="margin-left: 20px;">b. The construction of a barn, loafing shed, farm equipment storage building, produce storage or packing structure, or similar agricultural structure, covering thirty thousand square feet on land zoned agricultural, or fifteen thousand square feet in all other zones, and to be used only by the property owner or agent in the conduct of farming the property. This exemption shall not apply to feed lots;</p> <p class="margin-left: 20px;">c. The construction of an office, school, commercial, recreational, service or storage building with twelve thousand square feet of gross floor area, and with associated parking facilities designed for forty automobiles;</p> <p class="margin-left: 20px;">d. The construction of a parking lot designed for forty automobiles;</p> <p class="margin-left: 20px;">e. Any fill or excavation of five hundred cubic yards throughout the total lifetime of the fill or excavation and any fill or excavation classified as a class I, II, or III forest practice under RCW 76.09.050 or regulation thereunder: <b>The categorical exemption threshold shall be one hundred cubic yards for any fill or excavation that is in ((an aquatic area, wetland,)) a steep slope, ((or)) landslide ((hazard area)), or alluvial fan hazard area.</b> If the proposed action is to remove from or replace fill in ((an aquatic area, wetland,)) a steep slope, ((or)) landslide ((hazard area)), or alluvial fan hazard area to correct a violation, the threshold shall be five hundred cubic yards.</p> <p>2. The determination of whether a proposal is categorically exempt shall be made by the county department that serves as lead agency for that proposal.</p> <p>B. The mitigated DNS provision of WAC 197-11-350 shall be enforced as follows:</p> <p>1. If the department issues a mitigated DNS, conditions requiring compliance with the mitigation measures which were specified in the application and environmental checklist shall be deemed conditions of any decision or recommendation of approval of the action.</p> <p>2. If at any time the proposed mitigation measures are withdrawn or substantially changed, the responsible official shall review the threshold determination and, if necessary, may withdraw the mitigated DNS and issue a DS.</p> | <p>(1) Adds alluvial fan hazard areas to the list of areas in which limited fill and excavation is exempt.</p> <p>(2) Removes aquatic areas and wetlands to the list of areas in which limited fill and excavation is exempt.</p> | <p>(1) Alluvial fan hazard areas are a type of landslide hazard area according to WAC 365-190-120, but they are regulated as a separate type of geologically hazardous area in the K.C.C. By naming them in this section, the proposed code keeps the same intent and standards as existing code.</p> <p>(2) Aquatic areas and wetlands are proposed for removal to maintain alignment with WAC 197-11-800, the state code that describes what local governments must regulate.</p> | <p><i>Section Notes:</i></p> <ul style="list-style-type: none"><li>• <a href="#">WAC 197-11-800</a> lists the types of projects, based on different thresholds, that are exempt from SEPA review.</li><li>• Under state law, the County may raise some of the thresholds for certain types of construction or alterations.</li></ul> <p><i>Policy Analysis:</i></p> <ul style="list-style-type: none"><li>• Under state law, the grading necessary for the activities in A.1.a. through d. are exempt. The Council may wish to add language to clarify that grading for these activities to be consistent with state law.</li><li>• Exempting fill or excavation of up to 100 cubic yards in a steep slope, landslide, or alluvial fan hazard area is a policy choice.</li><li>• The existing code provides a larger exemption for code violations than for permitted projects in landslide, steep slope, and alluvial fan hazard areas. Providing a greater exemption for code violations is a policy choice.</li><li>• The existing code doesn’t explicitly recognize the limitations on these exemptions (such as for lands covered by water). The reference to the WAC does cover this, but the Code could be more explicit.</li></ul> |
| VIOLATIONS | <p>A. A person who alters a critical area or buffer in violation of law shall undertake corrective work in compliance with this chapter and K.C.C. ((chapter 23.08)) <u>Title 23</u>. When feasible, corrective work shall include restoration of the critical area and buffer. Corrective work shall be subject to all permits or approvals required for the type of work undertaken. In addition, the violator shall be subject to all fees associated with investigation of the violation and the need for corrective work.</p> <p>B. When a wetland or buffer is altered in violation of this title, restoration of the wetland and buffer shall comply with the restoration standards in K.C.C. 21A.24.340.</p> <p>C. When an aquatic area or ((buffer)) <u>riparian area</u> is altered in violation of this title, restoration of the ((stream and buffer)) <u>aquatic area or riparian area</u> shall comply with the restoration standards in K.C.C. 21A.24.380.</p> <p>D. All corrective work shall be completed within the time specified in the corrective work plan, but in no case later than one year from the date the corrective work plan is approved by the department, unless the director authorizes a longer period. The violator shall notify the department when restoration measures are installed and monitoring is commenced.</p> <p>E. Any failure to satisfy corrective work requirements established by law or condition including, but not limited to, the failure to provide a monitoring report within thirty days after it is due or comply with other provisions of an approved corrective work plan shall constitute a default, and the department may demand payment of any financial guarantees or require other action authorized by K.C.C. Title 27A or other applicable law.</p> <p>F. Reasonable access to the corrective work site shall be provided to King County for the purpose of inspections during any monitoring period.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | <p>(2) Changes references of "aquatic area buffers" to "riparian areas."</p>                                                            | <p>throughout the code to change term or reference to "aquatic area buffers" to "riparian areas," where appropriate, consistent with current terminology.</p>                                     |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |

| <p><b>21A.24.550 - Consolidated site review for single-family residential development.</b></p> <p>A. A development proposal shall be deemed to comply with this chapter and the department shall not require additional critical areas, fire or drainage review of a development proposal for a single-family residential development that is consistent with the conditions established by the department in its review of the development proposal if the applicant meets all of the following requirements:</p> <p>1. The applicant provides to the department a critical areas report prepared by a preferred consultant, as provided in K.C.C. Title 27, for the critical areas on the development proposal site;</p> <p>2. The department has issued a critical areas designation under K.C.C. 21A.24.500. If applicable, the designation shall be issued before septic system design, application and approval;</p> <p>3. The development proposal qualifies for simplified drainage review and does not require targeted drainage review under K.C.C. chapter 9.04;</p> <p>4. The development proposal does not require an alteration exception or reasonable use exception under this chapter, a variance from road standards under K.C.C. Title 14 or a drainage adjustment under K.C.C. chapter 9.04; and</p> <p>5. The development proposal locates structures, on-site septic drainfield areas, the well location, and other impervious surfaces, including but not limited to driveways, within the areas identified by the department.</p> <p>B. If an applicant indicates on a form approved by the department that a development proposal for a single family residence will be proposed for review under this section, the department shall consolidate critical areas, drainage, road standards, and fire review. Based on the information provided by the applicant under this section, the department shall identify a development footprint on the property where the applicant may clear and place structures and other impervious surfaces in order to meet the requirements of this chapter and K.C.C. chapters 9.04 and 16.82. At the time of development permit application, the department shall screen the proposal for compliance with the conditions established by the department under this section, set the conditions of permit approval and, if required, establish the mitigation financial guarantee. (Ord. 18257 § 23, 2016: Ord. 15051 § 234, 2004).</p> | <p>Repealed.</p>                                                                                                                        | <p>This section is rarely, if ever used, and there are no resources to implement it. There is a risk that administration of these procedures could cause a lack of clarity regarding vesting.</p> | <p><i>Section Notes:</i></p> <ul style="list-style-type: none"><li>• This section allows for the consolidation of reviews for site-related elements, which would include critical areas, fire, and/or drainage review. As written, it would not include other elements such as grading or clearing, zoning, or building review, which are also critical portions of the review process.</li></ul> <p><i>Policy Analysis:</i></p> <ul style="list-style-type: none"><li>• It is unclear how effective this section would be in permitting review if it had been implemented. Executive staff indicate that this section is infrequently used.</li><li>• Maintaining this code section may affect application vesting, which is a constantly evolving legal landscape.</li><li>• Repealing this section is a policy choice.</li></ul> |
| PLAN UPDATE, CODIFICATION, ECOLOGY APPROVAL, SEVERABILITY                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |                                                                                                                                         |                                                                                                                                                                                                   |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
| <p><u>SECTION 87.</u></p> <p>A. Attachment A to this ordinance is adopted as amendments to the 2024 King County Comprehensive Plan, as adopted in Ordinance XXXXX (Proposed Ordinance 2024-0440).</p> <p>B. The elements of the 2024 King County Comprehensive Plan in Attachment A to this ordinance are hereby amended to read as set forth in this ordinance and are incorporated herein by this reference.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | <p>Adopts portions of the ordinance and its attachments as amendments to the Comprehensive Plan and Shoreline Master Program (SMP).</p> | <p>Establishes the various elements of amendments to the proposed 2024 update to the Comprehensive Plan as proposed in this ordinance.</p>                                                        | <p><i>Policy Analysis:</i></p> <ul style="list-style-type: none"><li>• This section will be updated prior to council action to include any codes adopted in K.C.C. 20.12.200 as part of the SMP.</li></ul>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |

| C. The elements of the King County Shoreline Master Program in sections 41, 42, 44, 52, 53, 56, 58, 59, 60, 63, 67, 68, 69, 70, 71, 72, 73, 74, 75, 76, 77, 78, 79, 80, 81, 82, and 86 of this ordinance are hereby amended to read as set forth in this ordinance and are incorporated herein by this reference.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |                                                                                                                                                                                                                                                                          |                                                                                                                                                                                                   |                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| <b>K.C.C. 20.12.010 - Codifies adoption of the 2024 Comprehensive Plan.</b><br><u>SECTION 88.</u> Ordinance 263, Article 2, Section 1, as amended, and K.C.C. 20.12.010 are hereby amended to read as follows:<br>Under the King County Charter, the state Constitution, and the Growth Management Act, chapter 36.70A RCW, King County adopted the 1994 King County Comprehensive Plan via Ordinance 11575 and declared it to be the Comprehensive Plan for King County until amended, repealed, or superseded. The Comprehensive Plan has been reviewed and amended multiple times since its adoption in 1994. Amendments to the 1994 Comprehensive Plan to-date are currently reflected in the 2024 King County Comprehensive Plan, as adopted in <u>Ordinance XXXXX (Proposed Ordinance 2023-0440)</u> , and as amended by this ordinance. The Comprehensive Plan shall be the principal planning document for the orderly physical development of the county and shall be used to guide subarea plans, functional plans, provision of public facilities and services, review of proposed incorporations and annexations, development regulations, and land development decisions. | Reflects amendments to the 2024 Comprehensive Plan.                                                                                                                                                                                                                      |                                                                                                                                                                                                   | <i>Policy Analysis:</i> <ul style="list-style-type: none"><li>No issues identified.</li></ul>                                                                                                                                                                                                                                                                                                                                        |
| <u>SECTION 89.</u> The executive shall submit sections 41, 42, 44, 52, 53, 56, 58, 59, 60, 63, 67, 68, 69, 70, 71, 72, 73, 74, 75, 76, 77, 78, 79, 80, 81, 82, and 86 of this ordinance to the state Department of Ecology for its approval, as provided in RCW 90.58.090.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | Directs the Executive to submit ordinance sections that are part of the SMP to the Department of Ecology.                                                                                                                                                                | These elements of this proposed ordinance amend elements of the SMP as adopted in K.C.C. 20.12.200. As such, these changes are required to be reviewed and approved by the Department of Ecology. | <i>Section Notes:</i> <ul style="list-style-type: none"><li>Code sections that are part of the SMP (see K.C.C. 20.12.200 for the list of sections) must be approved by Ecology.</li></ul> <i>Policy Analysis:</i> <ul style="list-style-type: none"><li>This section will be updated prior to council action to include any codes adopted in <a href="#">K.C.C. 20.12.200</a> as part of the SMP.</li></ul>                          |
| <u>SECTION 90.</u> Sections 41, 42, 44, 52, 53, 56, 58, 59, 60, 63, 67, 68, 69, 70, 71, 72, 73, 74, 75, 76, 77, 78, 79, 80, 81, 82, and 86 of this ordinance take effect within the shoreline jurisdiction fourteen days after the state Department of Ecology provides written notice of final action stating that the proposal is approved, in accordance with RCW 90.58.090. The executive shall provide the written notice of final action to the clerk of the council.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | Notes that ordinance sections that are part of the King County shoreline master program take effect within the shoreline jurisdiction fourteen days after the state Department of Ecology provides written notice of final action stating that the proposal is approved. | These elements of this proposed ordinance amend elements of the SMP as adopted in K.C.C. 20.12.200. As such, these changes are required to be reviewed and approved by the Department of Ecology. | <i>Section Notes:</i> <ul style="list-style-type: none"><li>Code sections that are part of the SMP (see K.C.C. 20.12.200 for the list of sections) are not effective until 14 days after Ecology action.</li></ul> <i>Policy Analysis:</i> <ul style="list-style-type: none"><li>This section will be updated prior to council action to include any codes adopted in <a href="#">K.C.C. 20.12.200</a> as part of the SMP.</li></ul> |
| <u>SECTION 91. Severability.</u> If any provision of this ordinance or its application to any person or circumstance is held invalid, the remainder of the ordinance or the application of the provision to other persons or circumstances is not affected.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | Standard King County severability language.                                                                                                                                                                                                                              | Added to clarify that if part of the ordinance were found to be invalid, there remaining portion of the ordinance would not be affected.                                                          | <i>Policy Analysis:</i> <ul style="list-style-type: none"><li>No issues identified.</li></ul>                                                                                                                                                                                                                                                                                                                                        |
| <b>In Chapter 5 Environment, on page 5-51, amend as follows:</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | Substantive change. |----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <del>((E-412 — A small Category IV wetland that is less than 2,500 square feet and that is not part of a wetland complex may be altered to move functions to another wetland as part of an approved mitigation plan that is consistent with E-413 and E-414.))</del> |                             | important. The research indicates that a broader approach to protecting wildlife such as mammals, birds, and amphibians is needed, as buffers alone may not prevent the populations of many species from declining. Wetlands located in urban areas are generally less common and are more impacted by adjacent light and noise pollution, often contain non-native and invasive plant species, and lack intact vegetated corridors or habitat patches connecting adjacent habitat. Conserving wetland habitats, habitat patches, and vegetated corridors networks in urban areas and throughout the watershed is critical for certain species and provides refuge from drought and increasing temperatures due to climate change. | guidance does not support blanket allowances for alterations of wetlands, regardless of size and rating. Executive staff estimate that a very small proportion (1%) of wetlands currently fall under this provision. Affected properties may be able to pursue a reasonable use exception or critical area alteration exception if the property is unbuildable. This is a policy choice. |

PROGRAMMATIC ACTIONS TO COMPLY WITH NO NET LOSS AND BEST AVAILABLE SCIENCE

In addition to the regulatory updates in the Proposed Ordinance, the BAS Report identifies multiple nonregulatory activities that the County undertakes that help to meet the no net loss requirements of the GMA.

This includes the following activities, some of which are funded through multiple sources of revenue:

- Property acquisition (fee title, easement, or other interest) and property donations for conservation purposes. This includes conservation future tax (CFT) acquisitions, transfer of development right (TDR) program, public benefit ratings system (PBRS) program, and home buyouts in frequently flooded areas.
- Salmon recovery efforts, including salmon recovery efforts through the Water Resource Inventory Area (WRIA) forums; the Snoqualmie Valley Fish, Farm Flood work; County salmon habitat restoration projects (which includes habitat project effectiveness monitoring for select projects); and King County’s Fish Passage Restoration Program.
- Habitat restoration. This includes the “3 million trees” initiative, Parks Levy funding for riparian habitat (in the Executive’s transmitted 2026-2031Parks Levy Proposed Ordinance it falls under “multi-benefit river corridor projects”), and King County’s Small Habitat Restoration Program.

- Operational Guidance for Farms and Foresters. This includes Farm Management Plans, Fencing and Livestock Best Management Practices cost-sharing, Forest Stewardship Plans
- Coordination with other agencies, such as King Conservation District.
- Monitoring and Adaptive Management. Monitoring and adaptive management is the subject of a proviso on the 2025 Annual Budget that is expected to be transmitted to the Council in June 2025.
- Updated information, such as the 2024 update to stream and wetland mapping and future classification, permitting division bulletins that describe critical area requirements, ongoing channel migration zone delineation and mapping, an upcoming Wildlife Habitat Climate Gradient Analysis, ongoing flood mapping, and upcoming alluvial fan mapping.

There are also several planning level activities described in the BAS Report that are also stated to contribute to no net loss. This includes strategies and policies within the Clean Water Healthy Habitat Strategic Plan, 30-Year Forest Plan, Strategic Climate Action Plan, and Flood Management Plan.

Finally, several County agencies are dedicated to conservation and restoration activities that are stated to contribute to no net loss. Agencies identified in the BAS Report include the urban forestry program, code enforcement, the groundwater monitoring program, and basin stewards.

| 2024 KING COUNTY COMPREHENSIVE PLAN UPDATE CRITICAL AREA POLICIES<br>Text from the adopted 2024 KCCP update (Ordinance 19881) |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | This table is shown in legislative mark-up for reference, to compare the 2016 KCCP (as amended) with the 2024 KCCP update. These changes have already been adopted under Ordinance 19881. |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |

| <div><del><b>((Channel migration hazard area, moderate</b><br/>A portion of the channel migration zone, as shown on King County's Channel Migration Zone maps, which lies between the severe channel migration hazard area and the outer boundaries of the channel migration zone:</del><br/><br/><del><b>Channel migration hazard area, severe</b><br/>A portion of the channel migration zone, as shown on King County's Channel Migration Zone maps, which includes the present channel. The total width of the severe channel migration hazard area equals one hundred years times the average annual channel migration rate, plus the present channel width. The average annual channel migration rate as determined in the technical report is the basis for each Channel Migration Zone map:))</del><br/><br/><div><b>Channel Migration Zone</b><br/>Channel migration zones are those areas along a river channel within which the channel<del>((s))</del> can be reasonably predicted, based on best available science, to migrate over time as a result of natural and normally occurring hydrological and related processes when considered with the characteristics of the river and its surroundings. <u>In areas located in King County's shoreline jurisdiction, the channel migration zone includes areas shown on King County's Channel Migration zone maps, including both the severe channel migration hazard area and the moderate channel migration hazard area, and areas not shown on King County's Channel Migration Zone maps but located within the floodplain.</u></div></div> | <div><b>Critical Areas</b><br/><del>((The Growth Management Act requires cities and counties to designate, where appropriate, critical areas which include: 1) wetlands, 2) areas with a critical recharging effect on aquifers used for potable water, 3) fish and wildlife habitat conservation areas, 4) frequently flooded areas, and 5) geologically hazardous areas:))</del> <u>Any area that is subject to natural hazards or a land feature that supports unique, fragile, or valuable natural resources including fish, wildlife, or other organisms or their habitats or such resources that carry, hold, or purify water in their natural state. "Critical area" includes the following areas:</u><div><div>a. <u>Critical aquifer recharge areas:</u></div><div>b. <u>Frequently flooded areas, regulated as Flood Hazard Areas:</u><div><div>1. <u>Floodplain;</u></div><div>2. <u>Special flood hazard area, as shown on the Flood Insurance Rate Maps;</u></div><div>3. <u>Zero-rise flood fringe;</u></div><div>4. <u>Zero-rise floodway;</u></div><div>5. <u>FEMA floodway; and</u></div><div>6. <u>Channel migration zones;</u></div></div><div>c. <u>Fish and wildlife habitat conversation areas:</u><div><div>1. <u>Aquatic areas;</u></div><div>2. <u>Riparian areas;</u></div><div>3. <u>Wildlife habitat conservation areas; and</u></div><div>4. <u>Wildlife habitat networks;</u></div></div><div>d. <u>Geologically hazardous areas:</u><div><div>1. <u>Alluvial fan hazard areas;</u></div><div>2. <u>Channel migration zones;</u></div><div>3. <u>Coal mine hazard areas;</u></div><div>4. <u>Erosion hazard areas;</u></div><div>5. <u>Landslide hazard areas;</u></div><div>6. <u>Seismic hazard areas;</u></div><div>7. <u>Steep slope hazard areas;</u></div><div>8. <u>Tsunami hazard area; and</u></div><div>9. <u>Volcanic hazard areas; and</u></div></div><div>e. <u>Wetlands.</u></div></div></div></div></div></div> |
| <div><b>Ecological Function</b><br/>An ecological function refers to physical, chemical, and biological processes or attributes at some level of biological organization. For example, the ecological functions of wetlands include food chain support, water quality maintenance, flood storage, and wildlife habitat.</div>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | <div><b>Ecoregions</b><br/>Ecoregions are land areas that contain a geographically unique set of species, communities, and environmental conditions.</div>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
| <div><b>Ecosystem</b><br/>Ecosystem means the complex of a community of organisms and its environment functioning as an ecological unit.</div>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | <div><b>Endangered Species</b><br/>Endangered species means any species which is in danger of extinction throughout all or a significant portion of its range and which has been designated as such in regulations issued by the U.S. Fish and Wildlife Service or the state of Washington Department of Fish and Wildlife.</div>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| <div><b>Endangered Species Act ((ESA))</b><br/>The Endangered Species Act is an act that was adopted by the U.S. Congress in 1973 to provide a means to conserve ecosystems upon which endangered and threatened species depend and to provide a program for the conservation for such endangered and threatened species.</div>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | <div><b>((Endemic Species</b><br/>Endemic species <del>(or habitats or ecosystems)</del> are those that are native to, and occur only in, a particular area or locale. Endemic species generally have very specific adaptive requirements that are linked to particular habitat or ecosystems that are rare (e.g., Townsend's big-eared bats and caves). Even small changes in the ecosystem are likely to cause localized extinctions of these species:))</div>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |

| <p><b>Priority habitat</b></p> <p>Priority habitat means a habitat type with unique or significant value to one or more species. An area classified and mapped as priority habitat must have one or more of the following attributes:</p> <ul style="list-style-type: none"><li>• Comparatively high fish or wildlife density;</li><li>• Comparatively high fish or wildlife species diversity;</li><li>• Fish spawning habitat;</li><li>• Important wildlife habitat;</li><li>• Important fish or wildlife seasonal range;</li><li>• Important fish or wildlife movement corridor;</li><li>• Rearing and foraging habitat;</li><li>• Important marine mammal haul-out;</li><li>• Refugia habitat;</li><li>• Limited availability;</li><li>• High vulnerability to habitat alteration;</li><li>• Unique or dependent species; or</li><li>• Shellfish bed.</li></ul> <p>A priority habitat may be described by a unique vegetation type or by a dominant plant species that is of primary importance to fish and wildlife (such as oak woodlands or eelgrass meadows). A priority habitat may also be described by a successional stage (such as old growth and mature forests). Alternatively, a priority habitat may consist of a specific habitat element (such as a consolidated marine/estuarine shoreline, talus slopes, caves, snags) of key value to fish and wildlife. A priority habitat may contain priority and/or nonpriority fish and wildlife. [Washington Administrative Code</p> | <p><b>Priority Species</b></p> <p>Priority species means species requiring protective measures and/or management guidelines to ensure their persistence at genetically viable population levels. Priority species are those that meet any of the criteria listed below.</p> <p>((a:)) <u>a.</u> Criterion 1. State-listed or state-proposed species. State-listed species are those native fish and wildlife species legally designated as endangered (<u>Washington Administrative Code ((232-12-014)) 220-610-010</u>), threatened (<u>Washington Administrative Code ((232-12-014)) 220-200-100</u>), or sensitive (<u>Washington Administrative Code ((232-12-014)) 220-200-100</u>). State-proposed species are those fish and wildlife species that will be reviewed by the ((d))Department of ((f))Fish and ((w))Wildlife ((POL-M-6001)) for possible listing as endangered, threatened, or sensitive according to the process and criteria defined in <u>Washington Administrative Code ((232-12-297)) 220-610-110</u>.</p> <p>((b:)) <u>b.</u> Criterion 2. Vulnerable aggregations. Vulnerable aggregations include those species or groups of animals susceptible to significant population declines, within a specific area or statewide, by virtue of their inclination to congregate. Examples include heron colonies, seabird concentrations, and marine mammal congregations.</p> <p>((c:)) <u>c.</u> Criterion 3. Species of recreational, commercial, and/or <u>Indian</u> tribal importance. Native and nonnative fish, shellfish, and wildlife species of recreational or commercial importance and recognized species used for tribal ceremonial and subsistence purposes that are vulnerable to habitat loss or degradation.</p> <p>((d:)) <u>d.</u> Criterion 4. Species listed under the federal Endangered Species Act as either proposed, threatened, or endangered.</p> |

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |  |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |

It identifies sensitive areas for wetlands, streams, flood hazards, erosion hazards, landslide hazards, seismic hazards, and coal mine hazards:))</del></p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |  | <p><b>Sensitive Species</b></p> <p>Sensitive species means any species that is likely to become an endangered species within the foreseeable future throughout all or significant portion of its range and which has been designated as such in regulations issued by the U.S. Fish and Wildlife Service or the Washington State Department of Fish and Wildlife.</p>                                                                                                              |
| <p><b>Species of Local Importance</b></p> <p>Species of local importance include priority species as identified by the state of Washington Department of Fish and Wildlife; bird species whose populations in King County are known to have declined significantly over the past 150 years; anadromous salmonids; and aquatic species whose populations are particularly vulnerable to changes in water quality and water quantity.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |  | <p><del>((Unique Wetland</del></p> <p><del>The term unique wetland refers to bogs and fens, which have unusual and sensitive water chemistries:))</del></p>                                                                                                                                                                                                                                                                                                                        |
| <p><b>Wetland</b></p> <p>The term wetland means those areas that are inundated or saturated by surface or ground water at a frequency and duration sufficient to support, and that under normal circumstances do support, a prevalence of vegetation typically adapted for life in saturated soil conditions. Wetlands generally include swamps, marshes, bogs, and similar areas. Wetlands do not include those artificial wetlands intentionally created from nonwetland sites, including, but not limited to, irrigation and drainage ditches, grass-lined swales, canals, detention facilities, wastewater treatment facilities, farm ponds, landscape amenities, or those wetlands created after July 1, 1990 that were unintentionally created as a result of the construction of a road, street, or highway. Wetlands shall include those artificial wetlands intentionally created from nonwetland areas to mitigate conversion of wetlands.</p> |  | <p><del>((Wetland Banking</del></p> <p><del>Wetland banking is a process that allows certain wetlands to be developed if the development is accompanied by the restoration or creation of wetlands in other areas. (See Chapter 5: Environment)))</del></p>                                                                                                                                                                                                                        |
| <p><b>Wetland Functions</b></p> <p><del>((Functions refer to the ecological (physical, chemical and biological) workings or attributes of a wetland regardless of their importance to society. Food chain support or the transport and transformation of chemicals in ecosystems are examples of wetland functions. Water quality maintenance, flood storage, and wildlife habitat are examples of ecological functions to which society attributes a value:))</del> <u>The physical, biological, chemical, and geologic interactions among different components of the environment that occur within a wetland. Wetlands perform functions that are grouped into three categories: functions that improve water quality, functions that change the water regime in a watershed such as flood storage, and functions that provide habitat for plants and animals.</u> (See Chapter 5((:)), Environment)</p>                                              |  | <p><b>Wetland Values</b></p> <p>Values are estimates, usually subjective, of the worth, merit, quality, or importance of wetland attributes that are valuable and beneficial to society. Values vary by watershed or human community. Education, research, aesthetics, and recreation are examples of other wetland attributes that may be considered values in that they are beneficial to society.</p>                                                                           |

## 2025 Comprehensive Plan Update & Critical Areas Regulations Update

Proposed Ordinance 2024-0408

### King County Council Review and Adoption Schedule *As of August 14, 2025 - subject to change*

| Date                                               | Event                                                                                                                                                                                                                                                                                                              |

## Evaluation of different riparian area widths on number of intersecting parcels and changes to housing capacity within Urban Unincorporated King County.

March 26, 2025

### PURPOSE AND OVERVIEW

The Executive has proposed updates to the Critical Areas Ordinance (CAO). Council Central Staff requested additional information and analysis of potential development impacts of proposed updates to riparian area widths in Urban Unincorporated King County (UUKC), including comparison of current widths for type Shoreline (S) and Fish Bearing (F) streams (115 feet), the Executive Proposal to increase riparian area widths for Type S and F streams in UUKC to 180 feet, and the 200 foot width generally indicated for riparian area widths in the updated BAS Review. (The 200-foot width is proposed outside the Urban Growth Area but is not proposed for UUKC).

Based on a meeting with Council Central Staff, Executive Staff committed to doing additional GIS analysis to determine the numbers of parcels in UUKC that would be newly impacted by the proposed increase in riparian area widths, and to break out the results by subarea planning geographies. A key caveat is that actual impacts on development capacity can only be determined through the permitting process at a property scale, considering zoning, the presence of other critical areas on the property, as well as code allowances for buffer averaging and provisions for Reasonable Use Exceptions that are required by law. Further, it's important to note that this analysis is using current, proposed, and BAS-indicated riparian area widths for Type S and F streams where the widest width is applied; Executive staff made this conservative assumption for the analysis because Types S and F are the most prevalent stream types. In actual application of the code, if streams were determined to be Type N or O during the critical areas review, smaller riparian area widths would apply. In other words, this analysis will tend to **overestimate** the number of parcels newly impacted.

### RESULTS

Based on the GIS analysis, the following table includes the numbers and percentages of parcels that would be newly impacted by an increase in riparian areas widths from 115 feet to 180 feet, or to 200 feet:

**Table 1. Number of Parcels in Urban Unincorporated KC Intersected by Existing, Proposed, and Best Available Science-Suggested Riparian Areas Widths**

| Community Service Area (CSA) or Potential Annexation Area (PAA) | Stream miles | 115 ft riparian (Existing) | 180 ft riparian (Proposed) | 200 ft riparian (BAS suggested) | Additional # of parcels affected by increasing from 115 ft to 180 ft | Additional # of parcels affected by increasing from 115 ft to 200 ft | Additional # of parcels affected by increasing from 180 ft to 200 feet |
|-----------------------------------------------------------------|--------------|----------------------------|----------------------------|---------------------------------|----------------------------------------------------------------------|----------------------------------------------------------------------|------------------------------------------------------------------------|

For reference, 1,266 parcels newly impacted by increasing the riparian area under the Executive Proposed riparian-area width in UUKC from 115 feet to 180 feet represents 3.4 percent of the 37,178 parcels in the area analyzed.

Additionally, Executive Staff committed to provide additional analysis of changes in riparian area widths on housing capacity and to put in context overall housing capacity and housing targets for the urban unincorporated area, consistent with the 2024 Comprehensive Plan land capacity analysis, to estimate the residential development capacity potentially affected by the previously specified riparian buffer widths.

**Table 2. Potential Housing Unit Capacity in Urban Unincorporated KC Impacted by Current, Proposed, and Best Available Science-Suggested Riparian Area Widths**

| Community Service Area (CSA) or Potential Annexation Area (PAA) | Stream miles | Capacity potentially affected by 115 ft riparian area | Capacity potentially affected by 180 ft riparian area | Capacity potentially affected by 200 ft riparian area (BAS suggested) | Potential decrease in housing units by increasing riparian widths from 115ft to 180 ft | Potential decrease in housing units by increasing riparian widths from 115ft to 200 ft | Potential decrease in housing units by increasing riparian widths from 180 to 200 feet |

## KEY TAKEAWAYS

1. **These are high-level, conservative estimates that likely overstate the impact to residential capacity.**
2. The **existing** riparian area width for Type S and F streams of 115 feet impacts 3,685 parcels. Increasing the width to 180 feet (Executive Proposal) is conservatively estimated to newly impact an additional 1,266 parcels. Increasing to 200 feet would newly impact and estimated 1,765 parcels (difference of 499 from 180 feet). This analysis applies to a total of 37,178 parcels in the UUKC.
3. Varying the riparian area width has a relatively small estimated impact on residential capacity (see Table 2). The **existing** riparian width of 115 feet affects 4,926 units of residential capacity. Increasing to the 180-foot riparian area width could affect 837 more units of residential capacity. Increasing to the 200-foot riparian area width could affect an additional 136 units of capacity.
4. Overall, the riparian area's estimated impact on UUKC residential capacity overall (regardless of riparian width) will not significantly affect King County's ability to accommodate planned growth in UUKC. The land capacity analysis from the 2024 Comprehensive Plan estimated approximately 29,000 units of residential capacity in UUKC, sufficient to accommodate the projected 5,412 units of housing growth 2019-2044.

## OTHER FACTORS AFFECTING DEVELOPMENT

Being newly impacted by a riparian area width has the practical effect of triggering additional critical areas review for permits for new development, redevelopment, and remodels. Additionally, depending on how much of the property is constrained by the riparian area, it could limit the ability to achieve zoned density, though in some cases the presence of other critical areas (e.g. wetlands, frequently flooded areas, steep slopes, landslide hazard areas) may already effectively limit the potential to meet zoned density. It's not uncommon for development proposals to have more than one critical area and critical areas permit conditions applied to the permit. For the period from

2019 to 2021, 40 percent of development permits included a critical areas condition. Nine percent of permits had conditions related to both riparian areas and wetlands. Below is a table from Best Available Science (BAS) Report, p. 203, summarizing percentages of permit applications from 2019-2021 for which critical areas conditions were applied for all critical areas, riparian areas, and/or wetlands.

**Table B.1 Critical Areas screening trends and housing development.**

|                                                  | Count | Percent |
|--------------------------------------------------|-------|---------|
| Processed Housing Permits (2019-2021)            | 933   | 100%    |
| Any Critical Area Condition on Permit            | 370   | 40%     |
| Riparian Area <i>or</i> Wetland Buffer Condition | 270   | 29%     |
| Wetland Buffer Condition                         | 197   | 21%     |
| Riparian Area Condition                          | 158   | 17%     |
| Riparian Area <i>and</i> Wetland                 | 85    | 9%      |

### **ADDITIONAL INFORMATION ON METHODOLOGY**

The first analysis evaluates how many parcels within UUKC are intersected by a 115ft, 180ft and 200 ft riparian buffer. “Intersected” means any part of a parcel touching any part of a riparian area; so, there will be a range of how much of a parcel’s area intersects, from almost none, to an entire parcel. For ease of analysis, Executive Staff assumed all urban streams were Type F/S streams. This will slightly **overstate** the potential impact of number of parcels and housing capacity.

The second analysis uses the data from the first analysis to evaluate how development potential would be affected.

Both Analysis 1 and 2 focused on UUKC to be consistent with: housing targets, which only apply to the Urban Growth Area (UGA); allocated housing needs in the Countywide Planning Policies (CPPs), which only apply to the UGA; housing capacity analysis in the Comp Plan, which only applies to the UGA, and Growth Management Act, VISION, CPP, and Comp Plan requirements to focus development in the UGA.

#### **Analysis 1: Number of parcels affected by riparian buffers**

##### **Process:**

1. Generate stream buffers of 115’, 180’ and 200’ using GIS data for [double banked major rivers](#) and the most current streams layer.
2. Select all parcels in UUKC where any portion of the parcel intersects the riparian buffers.
3. Generate tallies using subarea planning geographies (urban Potential Annexation Areas and the urban portions of applicable rural [Community Service Areas](#)). Other urban unincorporated areas not in a subarea planning geography were also included to address the remainder of UUKC. Two rural Community Service Area subarea planning geographies were not included in the capacity analysis because they do not have urban unincorporated areas: Four Creeks/Tiger Mountain, and Vashon/Maury Island.

**Parameters:** Excludes public parcels, golf courses, tracts, greenbelts, and Rights-of-Way consistent with the 2024 Comprehensive Plan land capacity analysis.

#### Analysis 2: Capacity Analysis

##### **Process:**

1. Obtain the parcel size and number of existing units on affected parcels (i.e. parcels intersecting a riparian area).
2. Overlay the affected parcels with current zoning.
3. Multiply each parcel's area by the base density for each zone. For each parcel, calculate potential number of units by rounding to the nearest whole number.
4. Compare the existing units to maximum units (under zoning). Where a non-vacant parcel has a maximum / existing  $\geq 2$ , consider this parcel as "redevelopable." Subtract the number of existing units from the potential number of units to assign net capacity.
5. Sum the net capacity of affected vacant and redevelopable parcels by the same geographies in Analysis 1.

##### **Sources of existing number of units and zoning allowance:**

- Existing number of units: Assessor's extracts for residential, condo, and apartment buildings.
- The following base zoned densities were applied in non-residential zones:
  - CB -48 units/ac
  - I – 0 units/ac
  - NB – 8 units/ac
  - UR – 1 unit / 5 acres
- Mobile Home (Present Use): 1 unit
- Mobile Home Park (Present Use): zero capacity

##### **Caveats:**

- Parcels are considered redevelopable regardless of improvement value. Some vacant parcels may have low development viability due to other constraints, e.g. presence of steep slopes, wetlands, etc.
- Excludes parcels in current use taxation, consistent with the 2024 Comprehensive Plan land capacity analysis.

### Agriculture and the Critical Areas Regulations – LSLU 5/21/25

Agricultural activities are regulated under the critical area regulations in multiple ways. This write up focuses on what is allowed under the critical area alterations table, grading permit exemptions table, standards for agricultural activities in the critical areas regulations, and the livestock management ordinance. There are other regulations that apply to agricultural activities, including but not limited to zoning conditions, floodplain and shoreline regulations.

#### Standards for Agricultural Activities (note that where there is highlighting, that is the equivalent exemption for a clearing and grading permit)

- Construction of new single detached dwelling units are limited to farm residences, are only an allowed alteration in certain types of wetlands or wetland buffers, and are subject to the same criteria as nonresidential structures.
- Construction of nonresidential structures are an allowed alteration in alluvial fan hazard areas, wetlands and buffers, aquatic areas, riparian areas, severe migration hazard areas, and wildlife habitat areas, on sites where the predominant use is agricultural activities, with a farm management plan and all BMPs for the associated structure are installed and maintained, and limits on location; specific requirements for fencing; and for alluvial fan hazard areas and severe CMZs, feasibility of other more appropriate locations on-site, least risk, no hazardous substances, limits on footprint within the severe CMZ.
- Horticultural activities and grazing of livestock are an allowed alteration, without expansion into critical areas or buffers, in any critical area or buffer.
- New or expanded horticultural activities and grazing of livestock is an allowed alteration in wetlands/buffers, aquatic areas, riparian areas, CMZ, and wildlife habitat areas, on sites where the predominant use is agricultural activities, with limits to the clearing allowed (there is a change in the code from a square footage limit, to a limit on clearing vegetated areas), and with a farm management plan and all BMPs for the associated activities are installed and maintained. Note that the alteration table doesn't require it, but there are additional grazing buffer requirements for wetlands and buffers, aquatic areas, and riparian areas that are described below.
- These standards, for existing and for new and expanded, also apply to new and expanded commercial fish farm (except for landslide hazard areas over 40% slope and steep slope hazard areas and buffers, and that commercial fish farms are not an allowed alteration in these landslide hazard areas or buffers or alluvial fan hazard areas).
- These standards, for existing and for new and expanded, also apply to construction and maintenance of farm ponds, fish ponds, and livestock watering ponds (no permit for maintenance, but if the drainage area is used by salmonids, must have a farm plan and be inspected by KCD, DNRP, DLS or WDFW).
- Construction of a livestock heavy use area is an allowed alteration (except is not an allowed alteration in landslide hazard areas over 40% slope and steep slope hazard areas and buffers, and alluvial fan hazard area), with the same standards as for horticultural activities; plus limits for certain types of wetlands (only within a grazed or tilled wet meadows and buffers, with a farm plan or livestock plan, feasibility of other more appropriate locations on-site, and as far out of the buffer as possible); plus limits for aquatic areas, riparian areas, and CMZs (only in severe CMZs outside shoreline jurisdiction, in grazed or tilled wet meadows and their buffers, or in grazed or tilled riparian area; and with criteria for minimizing impacts, feasibility, farm plan, and least risk).
- Construction or maintenance of a farm pad is an allowed alteration in wetlands and buffers, aquatic areas, riparian areas, and CMZs, with criteria (only in severe CMZs outside shoreline jurisdiction, in grazed or tilled wet meadows and their buffers, or in grazed or tilled riparian area; and with criteria for minimizing impacts, feasibility, farm plan and all BMPs for the associated activities are installed and maintained, and least risk).
- Construction or maintenance of a livestock manure storage facility (no grading permit required with an approved farm plan, except a grading permit is required in landslide hazard areas under 40%, wildlife habitat networks, and wildlife habitat conservation areas) is an allowed alteration (except is not an allowed alteration in landslide hazard areas over 40% slope and steep slope hazard areas and buffers, and in an alluvial fan hazard area), with the same standards as for horticultural activities; plus limits for certain types of wetlands (only within a grazed or tilled wet meadows and buffers, with a farm plan or livestock plan, feasibility, and as far out of the buffer as possible); plus limits for aquatic areas, riparian areas, and CMZs (only in severe CMZs outside shoreline jurisdiction, in grazed or tilled wet meadows and their buffers, or in grazed or tilled riparian area; and with criteria for minimizing impacts, feasibility, farm plan, and least risk). The flood code also prohibits new manure facilities with slurries or sludge in the FEMA floodway.
- Construction of new agricultural drainage is an allowed alteration in wetlands and buffers, aquatic areas, riparian areas, CMZs, and wildlife habitat areas, with a farm plan; and no disturbance during breeding season in habitat areas.
- Maintenance or replacement of agricultural drainage (no grading permit required, but if the drainage area is used by salmonids, must have a farm plan and be inspected by KCD, DNRP, DLS or WDFW) is an allowed alteration in any critical area. Criteria includes:
  - Allowed with a forest plan or farm plan; or if it is done with hand labor, the area is stabilized to avoid noxious weed regrowth, revegetation occurs, and herbicides are used legally.
  - Allowed for existing agricultural activities, without expansion into critical areas or buffers.
  - Allowed for new and expansion of agricultural activities on sites where the predominant use is agricultural activities, with limits to the clearing allowed, and with a farm management plan and all BMPs for the associated activities are installed and maintained.
  - Where the drainage is used by salmonids, requires a farm plan.
- Maintenance of agricultural waterway (no grading permit if in compliance with the critical area alteration, but an inspection is required by KCD, DNRP, DLS or WDFW) is an allowed alteration in critical areas (but not allowed in habitat areas). Criteria includes:
  - Purpose is to improve agricultural production for sites engaged in agriculture;
  - With a Hydraulic Project Approval permit from WDFW;

- Compliance with the approved ADAP agreement;
- Work is done by a trained person; and
- Compliance with the Clearing and Grading Code.
- Construction (no grading permit is required on sites with agricultural activities, with a farm plan and all constructed using BMPs), 14' wide max, minimizing impacts, KCWSDM, least risk of channel migration, and other permits are obtained) or maintenance (no permit required if there is a farm plan) of farm field access drive is an allowed alteration in all critical areas in the A, APD, or FPP, on sites where there are agricultural activities, with a farm management plan and all BMPs for the associated activities are installed and maintained, feasibility, compliance with the KCSWDM, least risk of channel migration, and other permits are obtained.

#### **Supplemental allowance for agricultural activities within wetland buffers, riparian areas, and habitat conservation areas**

- Alterations can expand within these areas with a farm plan or livestock plan.
- Does not exempt these activities from permits, if they are otherwise required.
- Requires a public rule for farm plans.
- Goals for the farm plans include:
  - maintain the productive agricultural land base and economic viability of agriculture on the site
  - maintain, restore, or enhance critical areas to the maximum extent practical in accordance with the site-specific goals of the landowner
  - use federal, state, and local best management practices and best available science for farm management to achieve the goals of the farm management plan
  - monitor the effectiveness of best management practices and implement additional practices through adaptive management to achieve the goals of the farm management plan
- In the shoreline jurisdiction, also required to be consistent with SMP, consider shoreline protection and restoration plan, and ensure no net loss of shoreline and critical area functions and values.
- Plans are required to include:
  - Inventory of critical areas, structures, cleared and forested areas, and other significant features
  - Site-specific performance standards and best management practices to:
    - maintain, restore or enhance critical areas and associated buffers, and
    - maintain and enhance native vegetation on the site including the best management practices for the installation and maintenance of farm field access drives and agricultural drainages
  - A plan for future changes to structures or clearing or grading
  - A plan for implementation and monitoring. Modifications to the farm plan are encouraged if adverse impacts are identified.
- Farm plans are required to document flood compensatory storage compliance.
- Farm plans are required to be approved by the County. The County can do a site visit before approval, and the County's review is that the farm plan is likely to accomplish the goals and is consistent with the standards.

#### **Additional requirements for livestock management**

- Farm plans are required to have:
  - Nutrient management plans
  - Measures to minimize pollution in wetlands and aquatic areas, which could include exclusion of animals from such areas
  - Timeline for implementation
  - An option to require a monitoring plan
- Allowances in the livestock management plan include:
  - A goal of a:
    - 40 foot wide grazing area buffer from the OHWM of S and F aquatic areas and edge of category I, II, and III wetlands (not including grazed wet meadows)
    - 35 foot wide grazing area buffer from the OHWM of N aquatic areas
    - 20 foot wide grazing area buffer from edge of category 4 wetlands (not including grazed wet meadows)
  - These buffers can be varied, or changed, based on guidelines agreed to by King County and KCD.
  - Manure BMPs to avoid having manure within 10 feet of O aquatic areas are required.
  - Clearing of lands for grazing are required to comply with K.C.C. 21A.24 (the standard widths plus the alterations table).
  - Ensure that drainage ditches do not channel waste to aquatic areas or wetlands

- A 20 foot wide vegetated area is required downslope of confinement areas, within 200 feet of S, F, and N waters. This may be waived on sites with 2.5 acres or less, if there is a buffer of 40 feet, manure is removed daily in the winter and stored in compliance with the K.C.C., and BMPs recommended by the KCD are implemented and maintained
- Deviation from manure management standard are addressed in the livestock plan.
- A copy of the final plan is submitted to the department within 60 days of completion. An appeal to the Hearing Examiner of DNRPs approval is allowed.
- Properties with an existing approved livestock management plan are deemed to have satisfied the requirements.
- Low density livestock operations are not required to get a livestock management plan if they meet other standards in K.C.C. 21A.30.060, including:
  - Livestock watering standards, including limiting access to aquatic areas and riparian areas, use of fencing, use of bridges;
  - Grazing area buffers of 50 feet from edge of a wetland (excluding grazed wet meadows) or OHWM of S, F, or N aquatic areas, or 25 feet from a category IV wetland. These buffers can be reduced to 25 feet when a 25-foot buffer already exists. Fencing is required. These buffers include from critical areas on adjacent properties.
  - Clearing of lands for grazing are required to comply with K.C.C. 21A.24 (the standard widths plus the alterations table).
  - No plowing within 200 feet of S, F, or N aquatic areas or wetlands in the winter.
  - Confinement areas within 200 feet S, F, or N aquatic areas or wetlands (except grazed wet meadows) require a 20-foot vegetative filter strip downhill from confinement area and new confinement areas cannot be located in the riparian area adjacent to S, F, or N aquatic areas or wetlands. Fencing is required. These requirements apply for aquatic areas and wetlands on adjacent properties.
  - Manure storage areas required that runoff be diverted away from manure storage. Manure 200' uphill of S, F, or N aquatic areas or wetlands required to be covered to exclude precipitation and allow free flow of air or be in a concrete bunker (which requires monitoring) or lagoon for pickup to prevent leachate from reaching aquatic area or wetland. May not be stored in a riparian area or wetland buffer except grazed or tilled wet meadows, if there is another alternative on site. Avoid manure runoff into aquatic areas or wetlands. Manure piles cannot be closer than 100 feet uphill from wetland edges (except grazed or tilled wet meadows), OHWM of aquatic areas, or ditches where the topography would direct runoff from the manure; can be reduced to 50 feet if part of a compost system on an impervious area. Limits on spreading manure seasonally.
  - Buffer maintenance is allowed.
  - Areas with existing fencing are deemed compliant, except fencing must be present for all S and F aquatic areas.
  - No public access, use, or dedication within buffer areas.

Critical Area Alterations Table

|                                                   | Alluvial Fan Hazard Areas | Wetland and Buffer | Aquatic Areas, Riparian Areas, and Severe Channel Migration Hazard Areas | Wildlife Habitat Conservation Areas and Wildlife Habitat Networks | Conditions                                                                                                                                                                                                                                                                                                                                                                                                     | Policy Staff Comments                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |

| Construction of new single detached dwelling unit |                           | A 1                | ((A2))                                                                   |                                                                   | 1 allows farm residences are allowed in wetland and buffers (grazed or tilled wet meadows only)<br>2 would allow a new single detached dwelling unit in a buffer of a lake over 20 acres with several conditions. This allowance is proposed to be removed.                                                                                                                                                    | <ul style="list-style-type: none"><li>• 1 would allow a farm residence to be constructed in a grazed or tilled wet meadow, which is a type of wetland, subject to certain conditions. This is a policy choice to allow these residences in wetlands.</li><li>• No other allowances for new single detached dwelling units are allowed in critical areas. A new single detached dwelling unit in these identified critical areas/buffers would be required to go through a critical area alteration exception or a reasonable use exception (depending on the impact).</li></ul> |
| Construction of nonresidential structure          | A 3                       | A 3                | A 3                                                                      | A 3, 4                                                            | 3 Expansion of agriculture to agricultural activities, meaning sites with processing and warehousing can build new nonresidential structures (subject to feasibility, risk, size, impact requirements) as follows: <ul style="list-style-type: none"><li>• Allowed in alluvial fans</li><li>• Allowed in wetland and buffers (grazed or tilled wet meadows only)</li><li>• Allowed in riparian areas</li></ul> | 3: Alluvial fan hazard areas are a type of steep slope hazard area. New nonresidential structures are not permitted in a steep slope hazard area, meaning that it would not be allowed in an alluvial fan hazard area. Council may wish to clarify this.                                                                                                                                                                                                                                                                                                                        |

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | Alluvial Fan Hazard Areas | Wetland and Buffer | Aquatic Areas, Riparian Areas, and Severe Channel Migration Hazard Areas | Wildlife Habitat Conservation Areas and Wildlife Habitat Networks | Conditions                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | Policy Staff Comments                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |

Agricultural activities includes other activities like on-site storage, distribution, processing, sales, maintenance. This would allow new nonresidential structures in critical areas associated with any type of agricultural activity, rather than just associated with agricultural uses (growing crops and raising livestock). This is a policy choice.</p> <p>This existing code requires that all BMPs in an approved farm plan be installed and maintained. KCD staff note that it is typical that of 3-4 BMPs in the farm plan, only 1 or 2 are actually installed, usually due to the cost of installing BMPs. This means that this allowed alteration would not apply to most farm plans.</p>                                     |

|------|---------------------------|--------------------|--------------------------------------------------------------------------|-------------------------------------------------------------------|------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| pond |                           |                    |                                                                          |                                                                   |            | <p>53: As written, this condition appears to limit agricultural activities to only those established <i>after</i> January 1, 2005, not those in continuous existence <i>before</i>. This could be clarified. It could also be updated to reflect agricultural activities legally established between 2005 and 2025 (or to remove the date completely).</p> <p>54: New and expansion of livestock in these critical areas would be permitted on properties predominately used for agricultural activities, on areas without predominantly native vegetation, subject to grazing area buffers (0 to 50 feet), a farm management plan, and other requirements. Agricultural activities include the growing of crops and livestock, but also includes activities such as processing, warehousing, or sales. It is unclear if this is consistent with the BAS report, which indicates that the full buffer widths in K.C.C. 21A.24.358, ranging from 50 to 200 feet, “would apply if new grazing areas were proposed in critical areas that haven’t been converted for agricultural use” (page 97). Executive staff indicate that the code is intended to support the GMA goals around agriculture.</p> <p>54: Changing “agriculture”, which is limited to growing crops, livestock, or agricultural products, to “agricultural activities” would expand the types of uses. Agricultural activities include other activities like storage, distribution, processing. It means that meaning sites with processing and warehousing can build new nonresidential structures (subject to feasibility, risk, size, impact requirements) as follows:</p> <ul style="list-style-type: none"><li>• Allowed in alluvial fans</li><li>• Allowed in wetland and buffers (grazed or tilled wet meadows only)</li><li>• Allowed in riparian areas</li><li>• Allowed in channel migration hazard areas</li><li>• Allowed in WHCA and WHN outside of seasonal limits</li></ul> <p>This is a policy choice.</p> |

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | Alluvial Fan Hazard Areas | Wetland and Buffer | Aquatic Areas, Riparian Areas, and Severe Channel Migration Hazard Areas | Wildlife Habitat Conservation Areas and Wildlife Habitat Networks | Conditions                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | Policy Staff Comments                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |

This is a policy choice.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
| <p>53: Limited to activities in continuous existence since January 1, 2005, with no expansion within the critical area or critical area buffer. "Continuous existence" includes cyclical operations and managed periods of soil restoration, enhancement or other fallow states <u>not exceeding seven years and</u> associated with these horticultural and agricultural activities.</p> <p>54. Allowed for expansion of existing or new agricultural activities where:</p> <ol style="list-style-type: none"> <li>the site is predominantly involved in the practice of <del>((agriculture))</del> agricultural activities;</li> <li>there is no expansion into an area that: <ol style="list-style-type: none"> <li>has been cleared under a class I, II, III, IV-S, or nonconversion IV-G forest practice permit; or</li> <li>is <del>((more than ten thousand square feet with tree cover at a uniform density more than ninety trees per acre and with the predominant mainstream diameter of the trees at least four inches diameter at breast height))</del> a wetland, wetland buffer, or riparian area that contains predominately native forest overstory, shrub, or herbaceous layer, not including areas that are actively managed as agricultural crops for pulpwood, Christmas trees, or ornamental nursery stock;</li> </ol> </li> <li>the activities are in compliance with an approved farm management plan in accordance with K.C.C. 21A.24.051; and</li> <li>all best management practices associated with the activities specified in the farm management plan are installed and maintained.</li> </ol> |                           |                    |                                                                          |                                                                   |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | <p>54: As proposed, new or expanded agricultural activities would not be limited to 10,000 sf in treed areas, and instead would not be allowed in wetland, wetland buffers, or riparian areas that contain native forestry overstory, shrub, or herbaceous layer. Executive staff indicate that this change would result in greater protections, as the existing code would allow clearing of native shrubs or herbaceous species without a farm management plan or grading permit. This change would connect protection to specific critical areas, consistent with the County’s BAS, and limit new expansion into these critical areas. However, Council may note that these changes still would allow some livestock activities in critical areas that do not meet the native vegetation criteria, which represents a high-risk approach. This is a policy choice.</p> |
| Construction of a livestock heavy use area                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |                           | A 53, 54, 55       | A 53, 54, ((55,)) 56                                                     | A 53, 54                                                          | <p>55 allows the activities (livestock heavy use area and livestock manure storage facility) only in grazed or tilled wet meadows and their buffers:</p> <ul style="list-style-type: none"> <li>With a farm management plan or livestock management plan;</li> <li>If there is not another feasible location on-site; and</li> <li>The facility is located as close to the outside edge of the buffer to the maximum extent practical.</li> </ul>                                                                                                                                                                                          | <p>55 and 56 allow the construction of a livestock manure storage facility or livestock heavy use areas with no minimum buffer requirement, except that 20 feet of vegetation is a goal that the livestock management standards seek to livestock standards downslope of confinement area for a Type S, F, and N aquatic areas in some situations. This is a policy choice.</p> <p>This existing code requires that all BMPs in an approved farm plan be installed and maintained. KCD staff note that it is typical that of 3-4 BMPs in the farm plan, only 1 or 2 are actually installed, usually due to the cost of installing BMPs. This means that this allowed alteration would not apply to most farm plans.</p>                                                                                                                                                   |

No clearing, external construction, or other disturbance in a wildlife habitat conservation area is allowed during breeding seasons established under K.C.C. 21A.24.382.</p> <p>23. Allowed as follows:</p> <p>a. if conducted in accordance with an approved forest management plan((;)) or farm management plan((; or rural stewardship plan)); or</p> <p>b. without an approved forest management plan((;)) or farm management plan((; or rural stewardship plan)), only if:</p> <p>(1) removal is undertaken with hand labor, including hand-held mechanical tools, unless the King County noxious weed control board otherwise prescribes the use of riding mowers, light mechanical cultivating equipment, or herbicides or biological control methods;</p> <p>(2) the area is stabilized to avoid regrowth or regeneration of noxious weeds;</p> <p>(3) the cleared area is revegetated with native vegetation or climate-smart plants and stabilized against erosion; and</p> <p>(4) herbicide use is in accordance with federal and state law((;)).</p> <p>53. Limited to activities in continuous existence since January 1, 2005, with no expansion within the critical area or critical area buffer. "Continuous existence" includes cyclical operations and managed periods of soil restoration, enhancement or other fallow states not exceeding seven years and associated with these horticultural and agricultural activities.</p> <p>54. Allowed for expansion of existing or new agricultural activities where:</p> <p>a. the site is predominantly involved in the practice of ((agriculture)) agricultural activities;</p> <p>b. there is no expansion into an area that:</p> <p>(1) has been cleared under a class I, II, III, IV-S, or nonconversion IV-G forest practice permit; or</p> <p>(2) is ((more than ten thousand square feet with tree cover at a uniform density more than ninety trees per acre and with the predominant mainstream diameter of the trees at least four inches diameter at breast height)) a wetland, wetland buffer, or riparian area that contains predominately native forest overstory, shrub, or herbaceous layer, not including areas that are actively managed as agricultural crops for pulpwood, Christmas trees, or ornamental nursery stock;</p> <p>c. the activities are in compliance with an approved farm management plan in accordance with K.C.C. 21A.24.051; and</p> <p>d. all best management practices associated with the activities specified in the farm management plan are installed and maintained.</p> <p>58. If the agricultural drainage is used by salmonids, maintenance shall ((be in compliance)) comply with an approved farm management plan in accordance with K.C.C. 21A.24.051.</p> | <p>53: As written, this condition appears to limit agricultural activities to only those established <i>after</i> January 1, 2005, not those in continuous existence <i>before</i>. This could be clarified. It could also be updated to reflect agricultural activities legally established between 2005 and 2025 (or to remove the date completely).</p> <p>54: The change from “agriculture”, to “agricultural activities” would expand the types of uses. It means that meaning sites with processing and warehousing but not necessarily growing crops or raising livestock are able to use this alteration allowance.</p> <p>Conditions 53 to 58 are difficult to follow as they cover overlapping scopes and provide different requirements. They could be rewritten to provide clarity and consistency.</p> <p>This existing code requires that all BMPs in an approved farm plan be installed and maintained. KCD staff note that it is typical that of 3-4 BMPs in the farm plan, only 1 or 2 are actually installed, usually due to the cost of installing BMPs. This means that this allowed alteration would not apply to most farm plans.</p> |

|  |                                    |                          |                                                                                      |                                                                               | <p>the floodplain; and</p> <p>f. all other required state and federal permits have been obtained and actions comply with such permits.</p> | <p>Under the current code, all that is required is a farm management plan.</p> <p>For <u>maintenance</u> of farm field access drives:</p> <ul style="list-style-type: none"><li>• Under the current code, maintenance of a farm field access drive is treated the same as maintenance of driveways, private access roads, or parking lots, under 17. Those conditions prohibit the use of toxic substances, and when used by salmonids: complies with a ditch standard public rule, maintenance is limited to remove of sediment and stabilization or banks or channels.</li></ul> <p>29: As noted in the grading table, a grading permit is not required to construct a farm field access drive if constructed in compliance with a farm plan. Executive staff state “The King Conservation District (KCD) works with farmland owners/operators to understand management objectives and then creates a plan that supports those objectives while minimizing potential impacts to critical areas and critical area buffers. If plans will provide landowners/operators with certain benefits (e.g., regulatory flexibility, PBRS credit for agricultural land), the plans are reviewed and approved by DNRP. Implementation is generally KCD’s responsibility, but if the landowner/operator received cost-share support from DNRP, then DNRP ensures the practices were implemented as designed.” Council may wish to consider whether administration and monitoring through KCD would be sufficient to ensure compliance with these standards. The Council may also wish to consider whether the County should approve all farm management plans.</p> <p>Council may wish to consider making the language in 29 consistent with the same type of conditions in 53 to 58. For example, this condition only requires there be agricultural activities on-site, while 53 and 54 require predominant use by agricultural activities.</p> <p>Council may want to include <u>expansion</u> of a farm field access drive.</p> |

KCD staff note that it is typical that of 3-4 BMPs in the farm plan, only 1 or 2 are actually installed, usually due to the cost of installing BMPs. This means that this allowed alteration would not apply to most farm plans.</p> |

Only on sites with agricultural activities uses if:</u><br><u>a. consistent with an adopted farm <u>management</u> plan in accordance with K.C.C. Title 21A((-));</u><br><u>b. constructed using <u>best management practices</u> approved by the permitting division;</u><br><u>c. access is not greater than fourteen feet wide;</u><br><u>d. an alternate location is not available to provide less adverse impact on critical areas and associated buffers;</u><br><u>e. in compliance with the requirements for farmland dispersion within the King County Surface Water Design Manual;</u><br><u>f. located where it is least subject to risk from channel migration;</u><br><u>g. a floodplain development permit is obtained for any action within the floodplain; and</u><br><u>h. all other required state and federal permits have been obtained and actions comply with these permits.</u> | <ul style="list-style-type: none"><li>• Construction of a private drive on a non-agricultural property would require a clearing and grading permit, whereas a permit is not required for a farm field access drive. Allowing new livestock manure storage facilities and farm field access drives, without a clearing and grading permit, in a wetland, wetland buffer, aquatic area, or riparian area could potentially introduce pollutants, new impervious surface or pavement, or environmental degradation in these critical areas. Under Ecology’s guidance, agricultural uses are considered to be high impact.” As proposed, these uses would only be allowed when an alternate location is not available to provide less adverse impact. The code does not identify a minimum distance or buffer for these uses, meaning that these uses could be located closer to an aquatic area or riparian area than grazing area buffers would allow for grazing animals. Whether or to require a clearing and grading permit, establish a maximum size exemption threshold, allow these uses in certain critical areas, or limit what portion of a critical area they could be located, are policy choices.</li><li>• <u>16:</u> This condition applies to when farm field access drives are not required to obtain a grading permit. The criteria for this condition are similar, but not identical, to the criteria for farm field access drives in K.C.C. 21A.24.045. These could be made consistent for clarity.</li></ul> |

There are no limitations on impervious surface, length, or area of a farm field access drive in regards to a permit exemption. Plans are created and administered by KCD. DNRP reviews these plans when there are certain benefits (such as PBRs) are sought. Council may wish to consider whether administration and monitoring through KCD would be sufficient to ensure compliance with these standards. The Council may also wish to consider whether the County should approve all farm management plans in order to receive this grading permit exemption.</li><li>Executive state that "a provision could be added to Note 16 saying that no permit is needed if the new construction is under 2,000 square feet in area."</li></ul> <p>This new provision requires that all BMPs in an approved farm plan be installed and maintained. KCD staff note that it is typical that of 3-4 BMPs in the farm plan, only 1 or 2 are actually installed, usually due to the cost of installing BMPs. This means that this allowed alteration would not apply to most farm plans.</p> |

| <p><b>K.C.C. 21A.06.XXX - New Section</b></p> <p><u>NEW SECTION. SECTION 13.</u> There is hereby added to K.C.C. chapter 21A.06 a new section to read as follows:<br/>Commercial production of agricultural products: agriculture conducted by an operator who has done one or more of the following:<br/>A. Filed IRS Schedule F for a minimum of three years;<br/>B. Obtained and currently holds a United States Department of Agriculture Organic Certification producer certificate; or<br/>C. Enrolled, and remains in good standing, in the current use classification "Farm and agricultural land", under chapter 84.34 RCW.</p> | <p>Adds a new section to K.C.C. Chapter 21A.06 with a definition of “Commercial production of agriculture products.”</p> | <p>New definition of Commercial agriculture is proposed to be added to clarify which operations may receive certain allowances intended only for commercial operations (and not, for example, hobby farms). This definition formalizes existing internal guidance developed by DLS Permitting and the DNRP Agriculture and Forestry Team.</p> | <p><i>Policy Analysis:</i></p> <ul style="list-style-type: none"><li>• This definition is only used once in the code as a method to provide additional context in another definition, “agricultural activities”.</li><li>• The Council purposely did not define this term in 2017 when the agriculture code was reviewed and updated. It is unclear whether this internal guidance is consistent with that intent.</li><li>• It is a policy choice whether to narrow the scope of commercial agriculture in this way.</li><li>• It would also be out of scope of this ordinance if it is not related to a critical area regulation.</li></ul> <p><i>Executive staff state:</i> In 2017, Ordinance 18626 updated definitions for Agricultural Activities to include a reference to commercial production. Additionally, there are existing code flexibilities and special dispensations for agriculture uses and activities, such as the sizing of accessory structures (K.C.C. 16.02.240) and reduced permit fees (K.C.C. 27.02.055), that were intended for commercial farming and not hobby farms. In order to consistently identify commercial agriculture activities that qualify for code flexibility and special dispensation, Permitting and DNRP staff identified the need to establish criteria for what constitutes commercial production of agricultural products. Internal guidance was developed in 2021. For the purpose of regulating agricultural activities in the CAO, the proposed addition of a definition in Section 13 for commercial production codifies the internal criteria that have been used in practice since that time. Codifying this definition enhances transparency, aligns with</p> |

| Code                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | Executive’s Proposed Change                                                                | Executive’s Intent/Rationale                                                                                                                                                               | Policy Staff Comments                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |

|------|-----------------------------------|---------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|      |                                   |                                 | <p>existing ambiguity about where the condition applies?</p> <p>Exec staff state: Current condition 29 in K.C.C. 21A.24.045 (and related condition 16 in K.C.C. 16.82.051 which exempts farm field access drives from the requirement for a clearing and grading permit), only require consistency with an adopted Farm Management Plan and do not differentiate between commercial agriculture and hobby farms. Excepting construction of farm field access drives from a clearing and grading permit without conditions on size, location, and BMPs creates uncertainty and potential risk of unmitigated impact critical area functions and values. Additionally, the lack of cross references to other potentially applicable regulations (e.g., flood code, stormwater code) creates potential for other regulatory non-compliance issues. Amending Condition 29 to provide greater specificity on the conditions for construction farm field access drives helps to ensure no net loss of critical areas functions and values, as required by WAC 365.196.830.</p> <p>Q: What is the intent behind restricting the definition of farm field access drives to only farms in the APD, A zone, or FPP? Is the goal to prohibit farm field access drives anywhere else in the county that isn't a APD, FPP, or A zone farm? Or was the intent to classify this use as a driveway anywhere else in the county? Put another way, if a paved path is used to move farm products is on a farm in the RA zone, what would they fall under?</p> <p>Exec staff state: The intent was to restrict the use of this condition in the code to the A zoned areas, APD, and FPP. Note that</p> |

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |                                            |                                                                                                                                                                                                                                                                                                                                                                            | critterion e in condition 16 refers to the requirement within the King County Surface Water Design Manual for farmland dispersion, which only applies within A zoning, APD, or FPP properties outside of the APD. Access roads in RA zoned areas would need to follow the road/driveway development standards associated with that development. |
| <b>K.C.C. 21A.06.XXX - New Section</b><br><br><u>NEW SECTION. SECTION 23.</u> There is hereby added to K.C.C. chapter 21A.06 a new section to read as follows:<br>Grazing area buffer: a designated area contiguous to a wetland or aquatic area from which grazing livestock are excluded.                                                                                                                                                                                                                                                                  | Adds definition for “grazing area buffer.” | The existing K.C.C. uses the word “buffer” ambiguously, sometimes meaning critical area buffers, sometimes meaning grazing area buffers. This definition is proposed to be added to define grazing area buffers. Additionally, code standards are proposed to be clarified to say which apply to critical area buffers or riparian areas and which apply to grazing areas. | <i>Policy Analysis:</i> <ul style="list-style-type: none"><li>• Please refer to the analysis for <a href="#">K.C.C. 21A.24.051</a> and <a href="#">K.C.C. 21A.30</a> for standards related to grazing area buffers.</li></ul><br>No issues identified.                                                                                          |
| <b>NOT INCLUDED IN PROPOSED ORDINANCE</b><br><br><b>21A.06.700 Livestock, large.</b><br>Livestock, large: cattle, horses, and other livestock generally weighing over 500 pounds. | <p><b>21A.06.707 Livestock heavy use area.</b><br/>Livestock heavy use area: an enclosure, typically constructed with footing material, such as gravel, used to keep grazing livestock off pasture from late fall through early spring or when pastures are grazed down to reduce soil erosion, protect water quality and improve pasture productivity, aesthetics and livestock health. (Ord. 17539 § 21, 2013).</p> <p><b>21A.06.708 Livestock manure storage facility.</b><br/>Livestock manure storage facility: an impoundment made by constructing an embankment, pit or structure for the purpose of temporarily storing manure, liquid or slurry manure, agricultural wastewater or other organic agricultural waste before agronomic use to facilitate nutrient management and protect water quality. (Ord. 17539 § 22, 2013).</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
| <p><b>21A.24.051 Agricultural activities development standards.</b></p> <p><u>SECTION 42.</u> Ordinance 15051, Section 138, as amended, and K.C.C. 21A.24.051 are hereby amended to read as follows:</p> <p>A. The alterations identified in K.C.C. 21A.24.045 for agricultural activities are allowed to expand within <del>((the buffers of))</del> wetland<del>((s))</del> <u>buffers, ((aquatic areas)) riparian areas,</u> and wildlife habitat conservation areas, when an agricultural activity is currently occurring on the site and the alteration is in compliance with an approved farm management plan in accordance with this section or, for livestock activities, a farm management plan in accordance with K.C.C. chapter 21A.30.</p> <p>B. This section does not modify any requirement that the property owner obtain permits for activities covered by the farm management plan.</p> <p>C. The department of natural resources and parks or its designee shall serve as the single point of contact for King County in providing information on farm management plans for purposes of this title. The department of natural resources and parks shall adopt a <b>public rule</b> governing the development of farm management plans. The rule may provide for different types of farms management plans related to different kinds of agricultural activities, including, but not limited to the best management practices for livestock management, livestock crossing, livestock heavy use areas, horticulture management, site development, farm pads, farm field access roads, and agricultural drainage.</p> <p>D. <u>The property owner or applicant may develop the farm management plan as part of a program offered or approved by King County.</u> A property owner or applicant seeking to use the process to allow alterations in critical area buffers shall develop a farm management plan based on the following goals, which are listed in order of priority:</p> <ol style="list-style-type: none"><li>1. To maintain the productive agricultural land base and economic viability of agriculture on the site;</li><li>2. To maintain, restore, or enhance critical areas to the maximum extent practical in accordance with the site-specific goals of the landowner;</li><li>3. To the maximum extent practical in accordance with the site-specific goals of the landowner, maintain, and enhance natural hydrologic systems on the site;</li><li>4. To use federal, state, and local best management practices and best available science for farm management to achieve the goals of the farm management plan; and</li><li>5. To monitor the effectiveness of best management practices and implement additional practices through adaptive management to achieve the goals of the farm management plan.</li></ol> <p>E. If a part or all of the site is located within the shoreline jurisdiction, the farm management plan shall:</p> <ol style="list-style-type: none"><li>1. Consider and be consistent with the goals of the shoreline management act and the policies of the King County shoreline master program;</li><li>2. Consider the priorities of the King County shoreline protection and restoration plan; and</li><li>3. Ensure no net loss of shoreline ecological functions <u>and critical area functional and values.</u></li></ol> <p>F. <del>((The property owner or applicant may develop the farm management plan as part of a program offered or approved by King County.))</del></p> <p>The plan shall include, but is not limited to, the following elements:</p> <ol style="list-style-type: none"><li>1. A site inventory identifying critical areas, structures, cleared and forested areas, and other significant features on the site;</li><li>2. Site-specific performance standards and best management practices to maintain, restore or enhance critical areas and <del>((their))</del> <u>associated</u> buffers, and maintain and enhance native vegetation on the site including the best management practices for the installation and maintenance of farm field access drives and agricultural drainages;</li><li>3. A plan for future changes to any existing structures or for any changes to the landscape that involve clearing or grading;</li><li>4. A plan for implementation of performance standards and best management practices;</li><li>5. A plan for monitoring the effectiveness of measures taken to protect critical areas and <del>((their))</del> <u>associated</u> buffers <del>((and to modify)).</del></li></ol> | <p>Technical changes regarding alterations and/or expansion within critical areas for agricultural activity uses with an approved farm management plan.</p> | <p>Changes to remove redundancy, improve clarity, and make consistent use of current terminology. Reorders existing content for more logical flow. Existing intent is retained.</p> | <p><i>Section Notes:</i></p> <ul style="list-style-type: none"><li>• Farm management plans are required to be consistent with this section. Where livestock is farmed, farm management plans must also be consistent with K.C.C. <a href="#">21A.30.045</a>.</li><li>• Farm management plans are created by the King Conservation District (KCD) and farm operators to meet individual farm management objectives and minimize impacts to critical areas. If the plans provide certain benefits, such as regulatory flexibility or PBRS credit, they are reviewed and approved by DNRP.</li></ul> <p><i>Policy Analysis:</i></p> <ul style="list-style-type: none"><li>• The County has a <b>public rule</b> dating to 2005. The <a href="#">BAS report</a> recommends an update to this public rule to clarify the review and approval process, ensure use of the most current best management practices, and support application of a monitoring and adaptive management framework. The BAS report indicates that the Executive plans to update the rule following the adoption of this proposed ordinance. Whether to defer the requirements of a Farm Plan to a public rule process, rather than adopted through ordinance adopted by the Council, is a policy choice. Whether to have KCD, a separate government from the County, implement and enforce the plans, is also a policy choice.</li></ul> |

| Code                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | Executive’s Proposed Change                                                                                                                                                                                                                                                                                                                                                   | Executive’s Intent/Rationale                                                                                                                                                                                                                                                                                                                                                                                                                                | Policy Staff Comments                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |      |     |          |          | | <p><b>K.C.C. 21A.30.045 - Farm management plan requirements.</b></p> <p><u>SECTION 83.</u> Ordinance 11168, Section 3 as amended, and K.C.C. 21A.30.045 are hereby amended to read as follows:</p> <p>A. To achieve the maximum density allowances using a livestock management component of a farm management plan, the plan must meet the following criteria:</p> <p>1. The plan is developed as part of a program authorized or approved by King County. Certified Washington state Department of Ecology nutrient management plans that are consistent with all of the criteria of this section may substitute for a livestock management component of a farm management plan for commercial dairy farms. Commercial dairy farms that do not have approved nutrient management plans must meet the requirements of K.C.C 21A.30.060;</p> <p>2. The plan includes site-specific management measures for minimizing nonpoint pollution from agricultural activities and for managing <u>wetland and aquatic areas</u> including, but not limited to:</p> <p>a. livestock watering;</p> <p>b. grazing and pasture management;</p> <p>c. confinement area management;</p> <p>d. manure management; and</p> <p>e. <u>exclusion of animals from aquatic areas ((and their buffers)), riparian areas, and wetlands and ((their)) associated buffers with the exception of grazed wet meadows.</u></p> <p>3. The plan is implemented within a timeframe established in the plan and maintained so that nonpoint pollution attributable to livestock-keeping is minimized; and</p> <p>4. A monitoring plan may be required as part of the livestock management component of a farm management plan to demonstrate that there is no significant impact to water quality and <del>((salmonid fisheries))</del> <u>fish</u> habitat. Monitoring results shall be available to the King County agriculture program.</p> <p>B. The livestock management component of a farm management plan shall, at a minimum:</p> <p>1. <del>((Generally s))</del> <u>Seek to achieve a ((twenty-five foot buffer of)): forty-foot-wide grazing area buffer including</u> diverse, mature vegetation between grazing areas and the ordinary high water mark of all type S and F aquatic areas and the wetland edge of any category I, II, or III wetland with the exception of grazed wet meadows<del>((, using buffer averaging where necessary to accommodate existing structures));</del> <u>thirty-five-foot-wide grazing area buffer including diverse, mature vegetation between grazing areas and the ordinary high water mark of all type N aquatic areas; and twenty-foot-wide grazing area buffer including diverse, mature vegetation between grazing areas and the wetland edge of any category IV wetlands other than grazed wet meadows.</u> The livestock management component of a farm management plan((s)) may vary the width of the <u>grazing area</u> buffer <del>((of an aquatic area or wetland))</del>, and the time and duration of animal exclusion throughout the year, according to guidelines agreed upon by King County and the King Conservation District. The guidelines may support a different <u>grazing area</u> buffer width based on both the nature of the farm operation and the function and sensitivity of the aquatic area or wetland. The plan must include best management practices that avoid having manure accumulate in or within ten feet of type <del>((N or))</del> O waters. <del>((Forested lands being cleared))</del> <u>Clearing of lands</u> for grazing <del>((areas))</del> shall comply with the <u>riparian area widths and critical area buffers and all applicable regulations</u> in K.C.C. chapter 21A.24;</p> <p>2. <del>((Assure))</del> <u>Ensure</u> that drainage ditches on the site do not channel animal waste to aquatic areas and wetlands;</p> <p>3. Achieve an additional twenty<del>((-foot buffer))</del> <u>feet of diverse, mature vegetation</u> downslope of any confinement areas within two hundred</p> | <p>(1) Changes references to "aquatic area buffers" to "riparian areas."</p> <p>(2) Changes term "salmonid" to "fish."</p> <p>(3) Updates standards for grazing area buffer including diverse, mature vegetation for type S and F aquatic areas category I, II, or III wetlands except grazed wet meadows from 25 feet or 40 feet, which can be modified by the livestock</p> | <p>(1) Amendments are proposed throughout the code to change term or reference to "aquatic area buffers" to "riparian areas," where appropriate, consistent with current terminology.</p> <p>(2) Amendments are proposed throughout the code to change "salmonid" to "fish," where appropriate, to be consistent with King County's current protection of all fish species listed by WDFW, WA DNR and King County species of local importance, not just</p> | <p><i>Section Notes:</i></p> <ul style="list-style-type: none"><li>• This section addresses the livestock management component of a farm management plan.</li></ul> <p><i>Policy Analysis:</i></p> <ul style="list-style-type: none"><li>• <u>Wetland buffers and riparian areas</u> could be added to this subsection, as these are also areas that should be protected and are addressed in Subsection A.2.e.</li><li>• <u>Animals are allowed to graze in these critical areas</u> outside of the grazing area buffer. Council may wish to clarify this by including “except as otherwise allowed under this title”.</li><li>• <u>The grazing area buffers (the minimum distance between a critical area and a grazing area) are proposed to increase between 15 and 50 feet for most areas,</u> depending on the type or category of wetland or aquatic area and whether a farm management plan (FMP) is provided. | <p>feet of type S((and)), F, and N waters. This requirement may be waived for existing confinement areas on lots of two and one-half acres or less in size if:</p> <p>a. a minimum buffer of ((twenty five)) <b>forty feet</b> of diverse, mature vegetation is achieved;</p> <p>b. manure within the confinement area is removed daily during the winter season from October 15 to April 15, and stored in accordance with K.C.C. 21A.30.060.D.; and</p> <p>c. additional best management practices, as recommended by the King Conservation District, are implemented, and maintained; and</p> <p>4. Include a schedule for implementation.</p> <p>C. Any deviation from the manure management standards must be addressed in a livestock management component of a farm management plan.</p> <p>D. A copy of the final plans shall be submitted to the department of natural resources and parks within sixty days of completion.</p> <p>E. The farm management plan approved by the department of natural resources and parks may be appealed to the hearing examiner in accordance with K.C.C. 20.22.040 and 20.22.080. Appeals may be filed only by the property owner or four members of the King County agriculture commission. Any farm management plan not appealed shall constitute prima facie evidence of compliance with the regulatory provisions of K.C.C. 9.12.035.</p> <p><u>F. Properties operating subject to an existing livestock management farm plan developed based on the standards in effect before the effective date of this ordinance shall be deemed to have satisfied the standards of this section.</u></p> | <p>managemen<br/>t component<br/>of a farm<br/>managemen<br/>t plan.</p> <p>(4) Updates the term "buffer" to "grazing area buffer."</p> <p>(5) Adds a standard for grazing area buffers including diverse, mature vegetation of 35 feet for type N aquatic areas, which can be modified by the livestock managemen<br/>t component of a farm managemen<br/>t plan.</p> <p>(6) Adds a standard for grazing area buffers including diverse, mature vegetation of 20 feet for category IV wetlands other than grazed wet meadows,</p> | <p>salmonids.</p> <p>(3) The existing code uses the term "buffer" ambiguously; the term "grazing area buffer" is proposed to be used where the code sets standards for the distance from a feature that grazing is excluded. This is different from critical area buffers, in which additional restrictions apply.</p> <p>(4) – (6) Increased grazing area buffer width provides greater protection of wetland buffer and riparian area functions while limiting the reduction of the amount of farmable lands.</p> <p>(7) Clarifies when the proposed standards in this section would apply.</p> | <table><tr><td>I, II, or III</td><td>Yes</td><td>25 ft</td><td>50 ft</td></tr><tr><td>I, II, or III</td><td>No</td><td>50 ft</td><td>50 ft</td></tr><tr><td>IV</td><td>Yes</td><td>0 ft</td><td>20 ft</td></tr><tr><td>IV</td><td>No</td><td>0 ft</td><td>25 ft</td></tr></table> | I, II, or III | Yes   | 25 ft | 50 ft | I, II, or III | No | 50 ft | 50 ft | IV | Yes | 0 ft | 20 ft | IV | No | 0 ft | 25 ft |  |  |  |  |

| <ul style="list-style-type: none"><li>Although the buffers are proposed to increase in this proposed ordinance, they are significantly below the buffer widths recommended to achieve no net loss and therefore are depart from the County’s BAS. The <a href="#">BAS report</a> states: “King County has high confidence that there is high risk to riparian-area functions over the long term because the areas between 50 feet and SPTH (approximately 200 feet) will lack protections” (page 96). The BAS report indicates that buffer widths are intended to protect agricultural lands, consistent with GMA goals. The BAS also indicate that “King County employs a broad array of nonregulatory measures to protect critical areas and reduce risk to critical area functions and values” (page 96). A summary of nonregulatory measures is at the end of this document. Maintaining the program and buffer widths for livestock is a policy choice.</li></ul>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |                                                                                                                                                                                                                                                                                   |               |       |       |       |               |    |       |       |    |     |      |       |    |    |      |       |  |  |  |  |
| <ul style="list-style-type: none"><li>The code identifies buffers as a goal, where plans should “<b>seek to achieve</b>” these buffers. Executive staff indicate that the changes “clarify the minimum benchmark to be applied to riparian areas.” The language is intended to reflect that the King Conservation District and the landowner develop the plan, they are tailored to the site, the County cannot require restoration for past development impacts, and mature vegetation may take substantial effort to achieve. As proposed, this language would not require a minimum buffer, and instead establish a target that could be lower or higher than the widths identified. This is not described in the BAS report in this manner; instead the BAS report treats</li></ul>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |                                                                                                                                                                                                                                                                                   |               |       |       |       |               |    |       |       |    |     |      |       |    |    |      |       |  |  |  |  |

KCD staff note that it is typical that of 3-4 BMPs in the farm plan, only 1 or 2 are actually installed, usually due to the cost of installing BMPs. This means that this allowance would not apply to most farm plans.</p>                                                                                                                                                                                                                                |
| <p><b>K.C.C. 21A.30.060 - Animal regulations – Livestock management standards.</b></p> <p><u>SECTION 84.</u> Ordinance 10870, Section 534, as amended, and K.C.C. 21A.30.060 are hereby amended to read as follows:</p> <p>Property owners with farms containing either large livestock at densities greater than one animal unit per two acres, or small livestock at densities greater than five animals per acre, or both, are not required to follow a <del>((an))</del> livestock management plan if the owners adhere to the management standards in subsections A. through G. of this section. This section applies only if farm practices do not result in violation of any federal, state, or local water quality standards.</p> <p>A. To minimize livestock access to aquatic areas, property owners shall utilize the following livestock watering options:</p> <p>1. The preferred option, which is a domestic water supply, stock watering pond, roof runoff collection system, or approved pumped supply from the aquatic areas so that livestock are not required to enter aquatic areas for their water supply.</p> <p>2. Livestock access to type S <del>((and))</del>, F, and N waters <del>((, including their buffers))</del> and riparian areas shall be limited to crossing and watering points that have been addressed by a crossing or watering point plan designed to Natural Resource Conservation Services or King Conservation District specifications that prevent free access along the length of the aquatic areas.</p> <p>a. Fencing shall be used as necessary to prevent livestock access to type S <del>((and))</del>, F, and N waters.</p> <p>b. Bridges may be used, in accordance with K.C.C. chapter 21A.24, in lieu of crossings. Piers and abutments shall not be placed within the ordinary high water mark or top-of-bank, whichever is greater. Bridges shall be designed to allow free flow of flood waters and shall not diminish flood carrying capacity. These bridges may be placed without a county building permit, but the permit waiver shall not constitute any assumption of liability by the county with regard to such bridge or its placement. The waiver of county building permit requirements does not constitute a waiver from other required agency permits.</p> <p>B.1. Existing grazing areas not addressed by K.C.C. chapter 21A.24 shall maintain a <del>((vegetative buffer of fifty feet))</del> fifty-foot-wide grazing area buffer from the <del>((wetland))</del> edge of a category I, II <del>((or))</del>, III, or IV wetland, except those wetlands meeting the definition of grazed wet meadows, or the ordinary high water mark of a type S <del>((or))</del>, F, or N water, and a twenty-five-foot-wide grazing area buffer from the edge of a category IV</p> | <p>(1) Adds type N waters to aquatic area types to which livestock access standards apply.</p> <p>(2) Adds category IV wetlands to the wetland categories to which grazing area buffer standards apply.</p> <p>(3) Updates the term</p>                 | <p>(1) Type N waters flow into fish bearing streams and are proposed to be added to provide greater protection of riparian area functions while limiting the reduction of the amount of farmable land.</p> <p>(2) Category IV wetlands should be protected similarly to other wetland types from the</p> | <p><i>Section Notes:</i></p> <ul style="list-style-type: none"><li>• This section addresses livestock on farms without a farm management plan.</li></ul> <p><i>Policy Analysis:</i></p> <ul style="list-style-type: none"><li>• Although the buffers are proposed to increase in this proposed ordinance, they are significantly below the buffer widths recommended to achieve no net loss and therefore are depart from the County’s BAS. The <a href="#">BAS report</a> states: “King County has high confidence that there is high risk to riparian-area functions over the long term because the areas between 50 feet and SPTH (approximately 200 feet) will lack protections” (page 96). The BAS report indicates that buffer widths are intended to protect agricultural lands, consistent with GMA goals. The BAS also indicate that “King County employs a broad array of nonregulatory measures to protect critical</li></ul> |

| <p><del>wetland except those wetlands meeting the definition of grazed wet meadows.</del></p> <p>2. <del>((Forested 1))</del>Lands being cleared for grazing areas shall comply with <u>the riparian area widths and</u> critical area buffers <u>and the associated regulations</u> in K.C.C. chapter 21A.24.</p> <p>3. The grazing area buffer may be reduced to twenty-five feet where a twenty-five-foot buffer of diverse, mature vegetation already exists. <u>This buffer reduction may not be used when ((forested)) lands are being cleared for grazing areas.</u></p> <p>4. Fencing shall be used to establish and maintain the <u>grazing area</u> buffer unless the buffer is otherwise impenetrable to livestock.</p> <p>5. Fencing installed in accordance with the <del>((1990 Sensitive Area Ordinance before February 14, 1994))</del> <u>standards in effect before January 1, 2005</u>, at setbacks other than those specified in subsection B.<del>((1- and 2-))</del> of this section shall be deemed to constitute compliance with those requirements.</p> <p>6. Grazing areas within two hundred feet of a type S<del>((or))</del>, F, <u>or N</u> water or category I, II<del>((or))</del>, III, <u>or IV</u> wetland shall not be plowed during the rainy season from October 1 through April 30.</p> <p>7. Grazing areas may extend to the property line, provided that type S<del>((or))</del>, F, <u>or N</u> waters and category I, II<del>((and))</del>, III, <u>or IV</u> wetlands <u>that are located</u> adjacent to the property line are <del>((buffered))</del> <u>protected</u> in accordance with subsection B.1., 2., or 3. of this section.</p> <p>C.1. In addition to the buffers in subsection B.<del>((1- and 2-))</del> of this section, confinement areas located within two hundred feet of any type S<del>((or))</del>, F, <u>or N</u> waters or category I, II<del>((or))</del>, III, <u>or IV</u> wetlands with the exception of grazed wet meadows shall:</p> <p>a. have a twenty-foot-wide vegetative filter strip downhill from the confinement area, consisting of heavy grasses or other ground cover with high stem density and that may also include tree cover;</p> <p>b. not be located in <del>((the buffer of))</del> <u>a riparian area adjacent to</u> any type S<del>((or))</del>, F, <u>or N</u> water or any wetland buffer required by the critical areas ordinance in effect at the time the confinement area is built, or within fifty feet of the wetland edge of any category I, II<del>((or))</del>, III, <u>or IV</u> wetland or the ordinary high water mark of any type S<del>((or))</del>, F, <u>or N</u> water. Fencing shall be used to establish and maintain the buffer except where existing natural vegetation is sufficient to exclude livestock from the buffer<del>((Existing confinement areas that do not meet these requirements shall be modified as necessary to provide the buffers specified in this section within five years of January 1, 2005, though the footprint of existing buildings need not be so modified))</del>; and</p> <p>c. have roof drains of any buildings in the confinement area diverted away from the confinement area.</p> <p>2. Confinement areas may extend to the property line<del>((;))</del> if aquatic areas and wetlands adjacent to the property line are buffered in accordance with <del>((K.C.C. this))</del> subsection C. of this section.</p> <p>D.1. Manure storage areas shall be managed as follows:</p> <p>a. Surface flows and roof runoff shall be diverted away from manure storage areas;</p> <p>b. All manure stockpiled within two hundred feet uphill of any the ordinary high water mark of a type S <del>((or))</del>, F, <u>or N</u> water or the edge of a category I, II<del>((or))</del>, III, <u>or IV</u> wetland shall either be covered in a manner that excludes precipitation and allows free flow of air to minimize fire danger or be placed in an uncovered concrete bunker or manure lagoon or held for pickup in a dumpster, vehicle, or other facility designed to prevent leachate from reaching any aquatic area or wetland. Concrete bunkers shall be monitored quarterly for the first two years after installation, then annually unless problems were identified in the first two years, in which case quarterly monitoring shall continue and appropriate adjustments shall be made;</p> <p>c. Manure shall not be stored in any <del>((aquatic area buffer))</del> <u>riparian area</u> or wetland buffer, with the exception of grazed or tilled wet meadows unless there is no other alternative on the property. Manure shall be stored in a location that avoids having runoff from the manure enter aquatic areas or wetlands. Manure piles shall not be closer than one hundred feet uphill from:</p> <p>(1) any wetland edge excluding grazed or tilled wet meadows;</p> <p>(2) the ordinary high water mark of any aquatic area; or</p> <p>(3) any ditch to which the topography would generally direct runoff from the manure; and</p> <p>d. The location may be reduced to no closer than fifty feet if the manure pile is part of an active compost system that is located on an impervious surface to prevent contact with the soil and includes a leachate containment system.</p> <p>2. Manure shall be spread on fields only during the growing season, and not on saturated or frozen fields.</p> <p>E. For purposes of this section, "buffer maintenance" means allowing vegetation in the <u>grazing area</u> buffer that provides shade for the aquatic area or acts as a filter for storm water entering the aquatic area, other than noxious weeds, to grow to its mature height, though grasses in the buffer may be mowed but not grazed. Grading in the buffer is allowed only for establishment of watering and crossing points, or for other activities permitted in accordance with K.C.C. chapter 21A.24, with the appropriate permits.</p> | <p>"vegetative buffer" to "grazing area buffer."</p> <p>(4) Clarifies that properties with existing fencing installed at distances other than those specified in this section for which livestock management farm plans have been developed are considered compliant if approved fencing is present for all type S and F aquatic areas.</p> | <p>impacts of livestock due to their importance for wildlife and water quality, although they are proposed to have a smaller grazing area buffer than the other categories.</p> <p>(3) The existing code uses the term "buffer" ambiguously; the term "grazing area buffer" is proposed to be used where the code sets standards for the distance from a feature that grazing is excluded. This is different from critical area buffers, in which additional restrictions apply.</p> <p>(4) Establishes when the proposed standards in this section would apply.</p> | <p>areas and reduce risk to critical area functions and values” (page 96). A summary of nonregulatory measures is at the end of this document. Maintaining the program and buffer widths for livestock is a policy choice.</p> <ul style="list-style-type: none"><li>• “Existing grazing areas not addressed by K.C.C. chapter 21A.24” is intended to cover those areas without a farm plan. Council may wish to clarify this.</li><li>• The proposed ordinance includes <u>two grazing area buffer widths for Category IV wetlands</u>. Executive staff indicate that the 25-foot grazing area buffer was intended. Council may wish to clarify the buffer width for a Category IV wetland.</li><li>• <u>Grazed wet meadows</u> would not be subject to a grazing area buffer, which is a policy choice. Grazed wet meadows are defined as “an emergent wetland that has grasses, sedges, rushes or other herbaceous vegetation as its predominant vegetation and has been previously converted to agricultural activities. “ Executive staff state that standard buffers and regulations from K.C.C. Chapter 21A.24 apply if any other alterations are proposed.</li><li>• This <u>existing provision would allow buffers to be reduced to 25 feet</u> if “diverse, mature vegetation already exists” on properties without a farm management plan. This buffer would be lower than the buffers identified for properties with a farm management plan, meaning that the provisions would disincentivize property owners from obtaining a farm management plan. This provision could be removed to be consistent with the increased buffers proposed. Executive state they support removing this provision.</li></ul> |

| Code                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | Executive's<br>Proposed<br>Change | Executive's<br>Intent/Rationale | Policy Staff Comments                                                                                                                                                                     |

**CRITICAL AREA ORDINANCE**  
**SUMMARY OF KEY CHANGES IN STRIKING AMENDMENT S1 - updated August 12, 2025**

*This summary covers, at a high level, key areas of substantive change in the Local Services and Land Use Committee Chair's striking amendment S1. It does not detail all substantive policy changes. Refer to the effect statement for a description of all substantive changes proposed in the Chair's striking amendment.*

*For each key change, there is a brief summary of the existing code/policies, the Executive's proposal, and the striking amendment changes. The summary of existing and Executive-proposed language is not exhaustive; it only references these insofar as they relate to changes in the striking amendment. See the Executive's I-208 Analysis and Plain Language Summary, dated December 2024, for a full accounting of the Executive's proposed changes.*

| All sites in the Urban Growth Area are designated as high impact for the purposes of establishing wetland buffer widths.                                                                                                                                                                                                                                       | No changes.                                                                                                                                                                                                                   | Classifies moderate-intensity active recreation or open space and passive recreation inside the Urban Growth Area as moderate and low impact, respectively.       |
| Wetland buffer averaging is allowed if certain criteria are met: <ul style="list-style-type: none"> <li>- the total area is equal or greater to the standard buffer area;</li> <li>- the additional buffer is contiguous with the standard buffer;</li> <li>- the buffer is never less than 75% of the standard width or 75 feet for Category I and</li> </ul> | Changes to remove the numeric widths (for example, 75 feet for Category I and II) and use a maximum 75% width reduction only, prohibits buffer averaging with other reductions, and requires indirect impacts to be assessed. | When buffer averaging is proposed, requires revegetation where native vegetation does not current exist and requires no net loss of wetland functions and values. |

|                                                                                                                                                                                                                                                                                                                                         |                                                                                                                                                                                                                                                                                                   |                                                                                                                                                                                                                                                                                                                                                      |

| Farm field access drive is defined as an impervious surface constructed to provide a fixed route for moving livestock, produce, equipment, or supplies to and from farm fields and structures.<br>(K.C.C. 21A.06.451) | Clarifies that the drive may also be paved and narrows the definition to only be on a property in an Agricultural Production District, enrolled in the Farmland Preservation Program, or zoned A.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | Removes the restriction that limits the definition to only farm field access drives on properties in the A zone, Agricultural Production District, or Farmland Preservation Program. Move these regulations into another section of code.                                                                                                                                                 |
| Exempt from a clearing and grading permit only if consistent with an adopted farm management plan.<br>(K.C.C. chapter 16.82)                                                                                          | In addition to the existing code, adds the following conditions to the exemption: <ul style="list-style-type: none"> <li>- Only on sites with agricultural activities;</li> <li>- Constructed using best management practices;</li> <li>- Access is not greater than 14 feet wide;</li> <li>- There is no other alternative location with less impacts to critical areas and associated buffers available;</li> <li>- Complies with farmland dispersion requirements in the Surface Water Design Manual;</li> <li>- Is sited in an area least subject to channel migration;</li> <li>- Obtains a floodplain development permit and state and federal permits when required.</li> </ul> | In addition to the Executive's proposal, adds the following conditions to the exemptions: <ul style="list-style-type: none"> <li>- Adds a limitation to only properties in the A zone, Agricultural Production District, or Farmland Preservation Program; and</li> <li>- Creates less than 2,000 sf of new impervious surface.</li> </ul>                                                |
| In all critical areas, the alteration is allowed only in compliance with a farm management plan.<br>(K.C.C. 21A.24.045 Condition 29)                                                                                  | In addition to the existing code, adds the following conditions to the exemption: <ul style="list-style-type: none"> <li>- Sites must be currently involved in the practice of agricultural activities;</li> <li>- In compliance with a farm management plan and constructed using best management practices;</li> <li>- There is no other feasible location with less impacts to critical areas and associated buffers available;</li> <li>- Complies with the farmland dispersion requirements in the Surface Water Design Manual;</li> </ul>                                                                                                                                        | Maintains the Executive's proposal with the following changes: <ul style="list-style-type: none"> <li>- Sites must have a horticulture or livestock grazing activity; and</li> <li>- Complies with any other applicable flow control best management practices in the Surface Water Design Manual for projects that do not qualify for farmland dispersion.<br/>(Condition 59)</li> </ul> |

1 **STRIKING AMENDMENT TO PROPOSED ORDINANCE 2024-0408, VERSION**

2 **1**

3 On page 4, beginning on line 87, strike everything through page 246, line 4766, and  
4 insert:

5 "BE IT ORDAINED BY THE COUNCIL OF KING COUNTY:

6 **SECTION 1. Findings:**

7 A. The Washington state Growth Management Act ("GMA") requires counties to  
8 include the best available science ("BAS") in developing policies and development  
9 regulations to protect the functions and values of critical areas; give special consideration  
10 to conservation or protection measures necessary to preserve or enhance anadromous  
11 fisheries; ensure no net loss of ecological functions and values; and consider critical areas  
12 regulations as part of the comprehensive plan review and evaluation required by RCW  
13 36.70A.130.

14 B. King County completed its statutorily required comprehensive plan update in  
15 December 2024 via Ordinance 19881. Under the reasonable progress exception in RCW  
16 36.70.130(7)(b), the county has until December 2025 to complete the associated updates  
17 to critical areas regulations.

18 C. King County reviewed BAS and updated its critical areas policies and  
19 development regulations. The county's current BAS review builds on the county's 2004  
20 BAS review and was informed by GMA and state guidance documents, updated BAS for  
21 critical areas developed by state natural resources agencies, supplemental scientific  
22 literature, county experience in implementing critical area regulations since 2004,  
23 consideration of the county's unique land use context, and the need to meet multiple  
24 GMA goals.

25 D. The October 2024 Best Available Science Review and Updates to Critical  
26 Areas Protections report summarizes GMA requirements for review and inclusion of  
27 BAS in updates to Comprehensive Plan policies and critical areas regulations, describes  
28 tribal consultation and community engagement, details the approach and scope for BAS  
29 review, reviews Comprehensive Plan considerations, and identifies regulatory updates  
30 and nonregulatory actions to strengthen protection and ensure no net loss of critical areas  
31 functions and values. As required by GMA, where policies and development regulations  
32 depart from BAS, the report provides information and rationale to support departures,  
33 assesses potential risks to critical areas functions and values, and describes regulatory and  
34 nonregulatory actions to mitigate risk.

35 E. Comprehensive Plan policies, land use designations, zoning classifications,  
36 and development regulations work in concert with nonregulatory actions, including land  
37 conservation and habitat restoration to ensure no net loss of critical area functions and  
38 values.

39 F. The proposed updates to critical areas regulations strengthen protections for  
40 critical areas functions and values while advancing the goals of GMA, including the

41 designation and protection of resource lands and industries, housing accommodation,  
42 protection of property rights, and prevention of urban sprawl, all within the unique land  
43 use and development context of unincorporated King County.

44 G. The adoption of this ordinance completes all the requirements of the update  
45 required under RCW 36.70A.130.

46 SECTION 2.

47 A. Attachment A to this ordinance is adopted as amendments to the 2024 King  
48 County Comprehensive Plan, as adopted in Ordinance 19881.

49 B. The elements of the 2024 King County Comprehensive Plan in Attachment A  
50 to this ordinance are hereby amended to read as set forth in this ordinance and are  
51 incorporated herein by this reference.

52 C. The elements of the King County Shoreline Master Program in sections 49,  
53 50, 52.A., B.2., C.2., D., and E., 60, 61, 62, 63, 66, 67, 68, 70, 71, 72, 73, 81, 82, 83, 84,  
54 85, 86, 87, 88, 89, 90, 92, 93, 95, 96, 97, 98, 99, and 104.B. of this ordinance are hereby  
55 amended to read as set forth in this ordinance and are incorporated herein by this  
56 reference.

57 SECTION 3. Ordinance 15053, Section 3, as amended, and K.C.C. 16.82.051 are  
58 hereby amended to read as follows:

59 A. ~~((For the purposes of this section, t))~~The definitions in K.C.C. 16.82.020 apply  
60 to the activities described in this section. If a term is not defined, then the definition in  
61 K.C.C. chapter 21A.06 apply ~~((to the activities described in this section, if the terms are~~  
62 ~~not defined in K.C.C. 16.82.020))~~. Where definitions in K.C.C. 16.82.020 differ from the

definitions in K.C.C. chapter 21A.06, the definitions in K.C.C. 16.82.020 (~~shall apply~~)  
control.

B. The activities in subsection D. of this section are exempted from the  
requirement of obtaining a clearing or grading permit but only if those activities  
conducted in critical areas (~~are in compliance~~) comply with the standards in this chapter  
and in K.C.C. chapter 21A.24 and are legally established. Activities exempt from  
obtaining a clearing and grading permit are not exempt from other code requirements and  
may require other permits, including, but not limited to, a floodplain development permit.

C. Clearing and grading permit (~~requirement~~) exemptions in the table in  
subsection D. of this section shall be interpreted as follows:

1. The use of "NP" in a cell means that a clearing or grading permit is not  
required if the listed conditions and any applicable conditions in K.C.C. chapter 21A.24  
are met;

2. A number in a cell means the numbered condition in subsection E. of this  
section applies, and:

a. where a series of numbers separated by commas are in a cell, each of the  
numbered conditions for that activity applies; and

b. if more than one letter-number combination appears in a cell, the conditions  
of at least one letter-number combination(~~s~~) shall be met for a given exemption to  
apply;

3. In cases where an activity may be included in more than one activity  
category, the most-specific description of the activity shall govern whether a permit is  
required;

86 4. For activities ~~((involving more than one critical area))~~ where one or more  
87 critical areas are present, compliance with the conditions applicable to each critical area  
88 is required; and

89 5. Clearing and grading permits are required when a cell is empty and for  
90 activities not listed on the table.

91 D. Clearing and grading permit ~~((requirement))~~ exemptions.

92 E. The following conditions apply:

- 93 1. Excavation less than five feet in vertical depth(( $\frac{5}{7}$ )) or fill less than three feet
- 94 in vertical depth that, cumulatively on a single site since January 1, 2005, does not
- 95 involve more than one hundred cubic yards on a single site.
- 96 2. Grading that produces less than two thousand square feet of new impervious
- 97 surface on a single site added after January 1, 2005, or that produces less than two

98 thousand square feet of replaced impervious surface or less than two thousand square feet  
99 of new plus replaced impervious surface after October 30, 2008. For purposes of this  
100 subsection E.2., "new impervious surface" and "replaced impervious surface" are defined  
101 in K.C.C. 9.04.020.

102 3. Cumulative clearing on a single site since January 1, 2005 shall be limited to  
103 less than seven thousand square feet, including, but not limited to, collection of firewood  
104 and removal of vegetation for fire safety. This exemption shall not apply to development  
105 proposals:

- 106 a. regulated as a Class IV forest practice under chapter 76.09 RCW;
- 107 b. in a critical drainage areas established by administrative rules;
- 108 c. subject to clearing limits included in property-specific development  
109 standards and special district overlays under K.C.C. chapter 21A.38; or
- 110 d. subject to Urban Growth Area significant tree retention standards under  
111 K.C.C. 16.82.156 and K.C.C. Title 21A.

112 4. ~~((Cutting firewood for personal use in accordance with a forest management  
113 plan or rural stewardship plan approved under K.C.C. Title 21A. For the purpose of this  
114 condition, personal use shall not include the sale or other commercial use of the  
115 firewood.)) Repealed.~~

116 5. Limited to material at any solid waste facility operated by King County.

117 6. Allowed to prevent imminent danger to persons or structures.

118 7. Cumulative clearing of less than seven thousand square feet annually or  
119 conducted in accordance with an approved farm management plan((;)) or forest  
120 management plan((, or rural stewardship plan)).

121 8. Cumulative clearing on a single site since January 1, 2005, of less than seven  
122 thousand square feet and either:

123 a. conducted in accordance with a farm management plan~~((,))~~ or a forest  
124 management plan~~((, or a rural stewardship plan))~~; or

125 b. limited to removal with hand labor.

126 9. When conducted as a Class I, II, III<sub>2</sub> or IV-S forest practice as defined in  
127 chapter 76.09 RCW and Title 222 WAC.

128 10. If done in compliance with K.C.C. 16.82.065.

129 11. Only when conducted by or at the direction of a government agency in  
130 accordance with the regional road maintenance guidelines and K.C.C. 9.04.050, creates  
131 less than two thousand square feet of new impervious surface on a single site added after  
132 January 1, 2005, and is not within or does not directly discharge to an aquatic area or  
133 wetland. For purposes of this subsection E.11., "new impervious surface" is defined in  
134 K.C.C. 9.04.020.

135 12. Limited to clearing conducted by or at the direction of a government agency  
136 or by a private utility that does not involve:

137 a. slope stabilization or vegetation removal on slopes; or

138 b. ditches that are used by ~~((salmonids))~~ fish.

139 13. In conjunction with normal and routine maintenance activities, if:

140 a. there is no alteration of a ditch or aquatic area that is used by ~~((salmonids))~~  
141 fish;

142 b. ~~((the structure, condition, or site maintained was constructed or created in~~  
143 ~~accordance with law; and~~

144 e.)) the maintenance does not expand the roadway, lawn, landscaping, ditch,  
145 culvert, or other improved area being maintained; and

146 c. the maintenance does not involve the use of herbicides or other hazardous  
147 substances within critical areas or associated buffers, except for the removal of noxious  
148 weeds or invasive vegetation.

149 14. If a culvert is used by ~~((salmonids))~~ fish or conveys water used by  
150 ~~((salmonids))~~ fish and there is no ~~((adopted))~~ approved farm management plan, the  
151 maintenance is limited to removal of sediment and debris from the culvert and ~~((its))~~  
152 associated inlet, invert, and outlet and the stabilization of the area within three feet of the  
153 culvert where the maintenance disturbed or damaged the bank or bed and does not  
154 involve the excavation of a new sediment trap adjacent to the inlet.

155 15. If used by salmonids, only ~~((in compliance))~~ when consistent with an  
156 ~~((adopted))~~ approved farm management plan in accordance with K.C.C. Title 21A and  
157 only if the maintenance activity is inspected by:

- 158 a. The King Conservation District;  
159 b. King County department of natural resources and parks;  
160 c. King County department of local services, permitting division; or  
161 d. Washington state Department of Fish and Wildlife.

162 16. Only on a site where the primary use is agricultural activities, is within an  
163 Agricultural Production District, enrolled in the Farmland Preservation Program, or  
164 zoned A, and if:

165           a. consistent with an ((~~adopted~~)) approved farm management plan in  
166   accordance with K.C.C. Title 21A, including any best management practices applicable  
167   to the activity;

168           b. less than two-thousand square feet of impervious surface is created;  
169           c. access is not greater than fourteen feet wide;  
170           d. there is no alternative location with less impact on critical areas and  
171   associated buffers;

172           e. in compliance with the farmland dispersion requirements in the Surface  
173   Water Design Manual;

174           f. located where it is least subject to risk from channel migration;  
175           g. a floodplain development permit is obtained for any activity within the  
176   floodplain; and

177           h. all other required state and federal permits have been obtained and activities  
178   comply with these permits.

179           17. Only if consistent with an approved farm management plan in accordance  
180   with K.C.C. Title 21A.

181           18. In accordance with a right-of-way construction permit.

182           19. Only within the roadway in accordance with a right-of-way construction  
183   permit.

184           20. When:

185           a. conducted by a public agency;  
186           b. the height of the facility is not increased;  
187           c. the linear length of the facility is not increased;

188 d. the footprint of the facility is not expanded waterward;  
189 e. done in accordance with the Regional Road Maintenance Guidelines;  
190 f. done in accordance with the adopted King County Flood Management Plan  
191 and the Integrated Streambank Protection Guidelines (Washington State Aquatic Habitat  
192 Guidelines Program, 2002); and  
193 g. monitoring is conducted for three years following maintenance or repair and  
194 an annual report is submitted to the department.

195 21. Only if:

196 a. the activity is not part of a mitigation plan associated with another  
197 development proposal or is not corrective action associated with a violation((;)), and  
198 ~~((b. the activity is sponsored or cosponsored by a government agency that has~~  
199 ~~natural resource management as its primary function and the activity is))~~ limited to((;  
200 (4))) revegetation of the critical area and ((its)) associated buffer with native  
201 vegetation or climate-adaptive plants, or the removal of noxious weeds or invasive  
202 vegetation using only hand labor; or

203 b. the activity is sponsored or cosponsored by a government agency that has  
204 natural resource management as its primary function and limited to:

205 (1) revegetation of the critical area and associated buffer with native  
206 vegetation or climate-adaptive plants;

207 (2) the removal of noxious weeds or invasive vegetation;

208 (3) placement of weirs, log controls, spawning gravel, ((woody debris)) large  
209 wood, and ((other specific salmonid)) similar fish habitat improvements; and

210 ~~((3))~~ (4) hand labor except:

211 (a) the use of riding mower or light mechanical cultivating equipment and  
212 herbicides or biological control methods when prescribed by the King County noxious  
213 weed control board for the removal of noxious weeds or invasive vegetation; or  
214 (b) the use of helicopters or cranes if they have no contact with or otherwise  
215 disturb the critical area or ~~((its))~~ associated buffer.

216 22. If done with hand equipment ~~((and))~~, minimal grading including site access,  
217 does not involve any clearing, and equipment is removed when work is concluded.

218 23. Clearing for the purposes of wildfire preparedness that does not otherwise  
219 require another permit and that is not subject to K.C.C. 16.82.156 or K.C.C. Title 21A, as  
220 follows:

221 a. understory clearing within fifteen feet of a residential structure containing  
222 habitable space or an attached deck;

223 b. understory clearing and tree removal and pruning within ten feet of an  
224 installed aboveground nonportable liquefied petroleum gas tank;

225 c. within thirty feet of a residential structure containing habitable space,  
226 understory clearing and tree pruning underneath a tree crown to provide up to ten feet of  
227 vertical clearance from the ground to remove ladder fuels. Tree pruning shall not exceed  
228 one-third of the tree height;

229 d. within thirty feet of a residential structure containing habitable space, tree  
230 removal and pruning to provide up to fifteen feet of vertical clearance over driveways and  
231 roads used for emergency vehicle access;

232 e. within thirty feet of a residential structure containing habitable space, tree  
233 removal and pruning to provide up to eighteen feet between tree crowns;

234 f. tree removal and pruning to provide up to ten feet between tree crowns and  
235 decks, chimneys, overhead communication cables and electrical wires, or other  
236 structures; and

237 g. clearing may be allowed up to one hundred feet from a residential structure  
238 containing habitable space if advised by a wildfire risk assessment conducted by a  
239 professional holding a wildfire risk assessment certification or a forest stewardship plan  
240 approved by the department of natural resources and parks that includes best management  
241 practices to reduce wildfire risk. The removal and pruning of trees under this subsection  
242 to provide clearance between tree crowns is limited to:

243 (1) twelve feet between tree crowns for trees between thirty and sixty feet  
244 from a residential structure containing habitable space; and

245 (2) six feet between tree crowns for trees between sixty and one hundred feet  
246 from a residential structure containing habitable space.

247 24. Limited to the removal of downed trees.

248 25. Except on properties that are:

249 a. subject to clearing limits included in property-specific development  
250 standards and special district overlays under K.C.C. chapter 21A.38; or

251 b. subject to Urban Growth Area significant tree retention standards under  
252 K.C.C. 16.82.156.

253 26. Only if allowed under K.C.C. 21A.24.045.D.~~((69))~~58. and if the  
254 maintenance activity is inspected by the:

255 a. King Conservation District;

256 b. department of natural resources and parks;

257 c. department of local services, permitting division; or  
258 d. Washington state Department of Fish and Wildlife.

259 27. Clearing for the purposes of wildfire preparedness that does not otherwise  
260 require another permit, that is not subject to K.C.C. 16.82.156 or K.C.C. Title 21A., and  
261 that maintains any require screening consistent with K.C.C. chapter 21A.16, as follows:

262 a. tree pruning to provide up to ten feet of vertical clearance from overhead  
263 communication cables and electrical wire components of utility facilities, if:

264 (1) all debris is removed following the pruning activity;

265 (2) the activity is authorized by a right-of-way construction permit, if  
266 applicable; and

267 (3) pruning activities do not extend fifteen feet beyond the right-of-way;

268 b. understory clearing within fifteen feet of a utility facility structure; and

269 c. within thirty feet of a utility facility structure, understory clearing and tree  
270 pruning underneath a tree crown to provide up to ten feet of vertical clearance from the  
271 ground to remove ladder fuels. Tree pruning shall not exceed one-third of the tree height;

272 d. within thirty feet of a utility facility structure, tree removal and pruning to  
273 provide up to fifteen feet of vertical clearance over driveways and roads used for  
274 emergency vehicle access;

275 e. within thirty feet of a utility facility structure, tree removal to provide up to  
276 eighteen feet between tree crowns;

277 f. tree removal and pruning to provide up to ten feet between tree crowns and  
278 utility and facility structures; and

279           g. clearing may be allowed up to one hundred feet from the utility facility  
280 structure if such clearing activity is advised by a wildfire risk assessment conducted by a  
281 professional holding a wildfire risk assessment certification or a forest stewardship plan  
282 approved by the department of natural resources and parks that includes best management  
283 practices to reduce wildfire risks. The removal and pruning of trees to provide clearance  
284 between tree crowns is limited to:

285           (1) twelve feet between tree crowns for trees located between thirty and sixty  
286 feet from a utility facility structure; and

287           (2) six feet between tree crowns for trees located between sixty and one  
288 hundred feet from a utility facility structure.

289           SECTION 4. Ordinance 263, Article 2, Section 1, as amended, and K.C.C.

290 20.12.010 are hereby amended to read as follows:

291           Under the King County Charter, the state Constitution, and the Growth  
292 Management Act, chapter 36.70A RCW, King County adopted the 1994 King County  
293 Comprehensive Plan via Ordinance 11575 and declared it to be the Comprehensive Plan  
294 for King County until amended, repealed, or superseded. The Comprehensive Plan has  
295 been reviewed and amended multiple times since its adoption in 1994. Amendments to  
296 the 1994 Comprehensive Plan to-date are currently reflected in the 2024 King County  
297 Comprehensive Plan, as adopted in Ordinance 19881, and as amended by this ordinance.  
298 The Comprehensive Plan shall be the principal planning document for the orderly  
299 physical development of the county and shall be used to guide subarea plans, functional  
300 plans, provision of public facilities and services, review of proposed incorporations and  
301 annexations, development regulations, and land development decisions.

302            SECTION 5. Ordinance 3692, Section 2, as amended, and K.C.C. 20.12.200 are  
303 hereby amended to read as follows:

304            A. The King County shoreline master program consists of the following  
305 elements, enacted on or before ~~((December 23, 2024))~~ the date of enactment of this  
306 ordinance:

307            1. The King County Comprehensive Plan chapter six;

308            2. K.C.C. chapter 21A.25;

309            3. The following sections of K.C.C. chapter 21A.24:

310            a. K.C.C. 21A.24.045;

311            b. K.C.C. 21A.24.051;

312            c. ~~((K.C.C. 21A.24.055;~~

313            ~~d.))~~ K.C.C. 21A.24.070.A., B.2., C.2., D., and E.;

314            ~~((e.))~~ d. K.C.C. 21A.24.125;

315            ~~((f.))~~ e. K.C.C. 21A.24.130;

316            ~~((g.))~~ f. K.C.C. 21A.24.133;

317            g. Section 63 of this ordinance;

318            h. K.C.C. 21A.24.200;

319            ~~((i. K.C.C. 21A.24.210;))~~

320            ~~((j. K.C.C. 21A.24.220;))~~

321            ~~((k.))~~ i. K.C.C. 21A.24.275;

322            ~~((l.))~~ j. K.C.C. 21A.24.280;

323            k. K.C.C. 21A.24.310, as recodified by this ordinance;

324            ~~((m.))~~ l. K.C.C. 21A.24.290;

325            m. Section 72 of this ordinance;

326            n. Section 73 of this ordinance;

327            ~~((h-))~~ o. K.C.C. 21A.24.300;

328            p. K.C.C. 21A.24.210, as recodified by this ordinance;

329            q. K.C.C. 21A.24.220, as recodified by this ordinance;

330            ~~((e- K.C.C. 21A.24.310;))~~

331            ~~((p-))~~ r. K.C.C. 21A.24.316;

332            ~~((q-))~~ s. K.C.C. 21A.24.318;

333            ~~((r-))~~ t. K.C.C. 21A.24.325;

334            ~~((s-))~~ u. K.C.C. 21A.24.335;

335            ~~((t-))~~ v. K.C.C. 21A.24.340;

336            ~~((u-))~~ w. K.C.C. 21A.24.355;

337            ~~((v-))~~ x. K.C.C. 21A.24.358;

338            ~~((w-))~~ y. K.C.C. 21A.24.365;

339            ~~((x-))~~ z. K.C.C. 21A.24.380;

340            ~~((y-))~~ aa. K.C.C. 21A.24.382;

341            ~~((z-))~~ bb. K.C.C. 21A.24.386; and

342            ~~((aa-))~~ cc. K.C.C. 21A.24.388;

343            4. The following:

344            a. K.C.C. 20.18.050;

345            b. K.C.C. 20.18.056;

346            c. K.C.C. 20.18.057;

347            d. K.C.C. 20.18.058;

- 348 e. K.C.C. 20.22.160;  
349 f. K.C.C. 21A.32.045;  
350 g. K.C.C. 21A.44.090;  
351 h. K.C.C. 21A.44.100; ~~((and))~~  
352 i. K.C.C. 21A.50.030; and

353 5. The 2024 King County Flood Management Plan.

354 B. The shoreline management goals and policies constitute the official policy of  
355 King County regarding areas of the county subject to shoreline jurisdiction under chapter  
356 90.58 RCW. As provided by WAC 173-26-191(2)(a), King County's local  
357 administrative, enforcement, and permit review procedures shall conform to chapter  
358 90.58 RCW but shall not be a part of the shoreline master program.

359 C. Amendments to the shoreline master program do not apply to the shoreline  
360 jurisdiction until approved by the Washington state Department of Ecology (~~as~~  
361 ~~provided~~) in accordance with RCW 90.58.090. The department of local services,  
362 permitting division, shall, within ten days after the date of the Department of Ecology's  
363 approval, file a copy of the Department of Ecology's approval, in the form of an  
364 electronic copy, with the clerk of the council, who shall retain the original and provide  
365 electronic copies to all councilmembers, the chief of staff, and the lead staff of the local  
366 services and land use committee or its successor.

367 SECTION 6. Ordinance 10511, Section 7, as amended, and K.C.C. 20.36.100 are  
368 hereby amended to read as follows:

369 A. The definitions in this section apply throughout this section, as well as in  
370 K.C.C. 20.36.040 and K.C.C. 20.36.190, unless the context clearly requires otherwise.

371 B. To be eligible for open space classification under the public benefit rating  
372 system, a property shall contain one or more qualifying open space resources and have at  
373 least five points as determined under this section. The department shall review each  
374 application and recommend award of credit for current use of the property. In making the  
375 recommendation, the department shall utilize the point system described in subsections  
376 C. and D. of this section.

377 C. The following open space resources are each eligible for the points indicated:

378 1. Active trail linkage - fifteen or twenty-five points. "Active trail linkage"  
379 means land in private ownership through which the owner agrees to allow public passage  
380 for active transportation, as defined in K.C.C. 14.01.005, for the purpose of providing a  
381 connection between trails within the county's regional trails system and local or regional  
382 attractions or points of interest, for trail users including equestrians, pedestrians,  
383 bicyclists, and other users. "Local or regional attractions or points of interest" include  
384 other trails, parks, waterways, or other recreational and open space attractions, retail  
385 centers, arts and cultural facilities, transportation facilities, residential concentrations, or  
386 similar destinations. The linkage shall be open to passage by the general public and the  
387 property owner shall enter into an agreement with the county consistent with applicable  
388 parks and recreation division policies to grant public access. To receive twenty-five  
389 points, the property owner shall enter into an agreement with the county regarding  
390 improvement of the trail, including trail pavement and maintenance. To receive fifteen  
391 points, the property owner shall agree to allow a soft-surface, nonpaved trail. The parks  
392 and recreation division is authorized to develop criteria for determining the highest  
393 priority linkages for which it will enter into agreements with property owners;

394           2. Aquifer protection area - five points. "Aquifer protection area" means  
395   property that has a plant community in which native plants are dominant and that  
396   includes an area designated as a critical aquifer recharge area under K.C.C. chapter  
397   21A.24 or applicable city critical aquifer recharge area regulations. At least fifty percent  
398   of the enrolling open space area or a minimum of one acre of open space shall be  
399   designated as a critical aquifer recharge area. If the enrolling open space area does not  
400   have a plant community in which native plants are dominant, revegetation shall occur  
401   subject to a revegetation plan reviewed and approved by the department;

402           3. Buffer to public or current use classified land - three points. "Buffer to public  
403   or current use classified land" means land that has a plant community in which native  
404   plants are dominant or has other natural features, such as streams or wetlands, and that is  
405   abutting and provides a buffer to a publicly owned park, trail, or forest, to land legally  
406   required to remain in a natural state, to a state or federal highway, or to a property  
407   participating in a current use taxation program under chapters 84.33 or 84.34 RCW. The  
408   buffer shall be at least fifty feet long and fifty feet ((~~in~~)) wide. Public roads may separate  
409   the public land, or land in private ownership classified under chapters 84.33 or 84.34  
410   RCW, from the buffering land, if the entire buffer is at least as wide and long as the  
411   adjacent section of the road easement. Landscaping or other nonnative vegetation may  
412   not separate the public land or land enrolled under chapters 84.33 or 84.34 RCW from the  
413   native vegetation buffer. The department may grant an exception to the native vegetation  
414   requirement for property along parkways with historic designation, upon review and  
415   recommendation of the historic preservation officer of King County or the local  
416   jurisdiction in which the property is located. Eligibility for this exception does not

extend to a property where plantings are required or existing plant communities are protected under local zoning codes, development mitigation requirements, or other local regulations;

4. Ecological enhancement land – eighteen points. "Ecological enhancement land" means open space lands undergoing recovery of significantly degraded or lost ecological function or processes. The following requirements shall be met:

a. A jurisdiction, natural resource agency, or appropriate organization has committed to sponsoring the ecological enhancement project, with secured funding in place before the application's public hearing;

b. The ecological enhancement project shall include removing significant human-made structures, alterations, or impediments such as shoreline armoring, roads, culverts, and wetland fill that are detrimental to significant wildlife or salmonid habitat. The intent of the removal shall be to reestablish natural function or processes to the project area;

c. The owner is responsible for providing and implementing an ecological enhancement plan for the proposed project. The approved enhancement plan shall include at least a statement of purpose, detailed description of work to be done, site map of the project area, and specific timeline for the enhancement activities to be completed. The enhancement plan is subject to approval by the department; and

d. The owner shall annually provide to the department a monitoring report detailing the enhancement efforts' success for five years following enrollment. The owner shall also provide any additional monitoring reports required by K.C.C. 20.36.190. The monitoring report shall describe the progress and success of the enhancement project

and shall include photographs to document the success. Land receiving credit for this category may not receive credit for the ~~((rural stewardship land or))~~ resource restoration ~~((categories))~~ category;

5. Equestrian-pedestrian-bicycle trail linkage - thirty-five points. "Equestrian-pedestrian-bicycle trail linkage" means land in private ownership that the property owner allows the public to use as an off-road trail linkage for equestrian, pedestrian, or other active transportation, as defined in K.C.C. 14.01.005, uses, or that provides a trail link from a public right-of-way to a trail system. Use of motorized vehicles is prohibited on trails receiving a tax reduction for this category, except for maintenance or for medical, public safety, or police emergencies. Public access is required only on that portion of the property containing the trail. The landowner may impose reasonable restrictions on access that are mutually agreed to by the landowner and the department, such as limiting use to daylight hours. To be eligible as an equestrian-pedestrian-bicycle trail linkage, the owner shall provide a trail easement to an appropriate public or private entity acceptable to the department. The easement shall be recorded with the King County recorder's office or its successor. In addition to the area covered by the trail easement, adjacent land used as pasture, barn, or stable area and any corral or paddock may be included, if an approved and implemented farm management plan is provided. Land necessary to provide a buffer from the trail to other nonequestrian uses, land that contributes to the aesthetics of the trail, such as a forest, and land set aside and marked for off road parking for trail users may also be included as land eligible for current use taxation. Those portions of private roads, driveways, or sidewalks open to the public for this purpose may

also qualify. Fencing and gates are not allowed in the trail easement area, except those that are parallel to the trail or linkage;

6. Farm and agricultural conservation land - five points. "Farm and agricultural conservation land" means land previously classified as farm and agricultural land under RCW 84.34.020 that no longer meets the criteria of farm and agricultural land, or traditional farmland not classified under chapter 84.34 RCW that has not been irrevocably devoted to a use inconsistent with agricultural uses and has a high potential for returning to commercial agriculture. The property shall be used for farm and agricultural activities or have a high probability of returning to agriculture and the property owner shall commit to returning the property to farm or agricultural activities by implementing a farm management plan. An applicant shall have an approved farm management plan in accordance with K.C.C. 21A.24.051 (~~that is acceptable to the department~~) and K.C.C. 21A.30.045, if livestock is present, that is being implemented according to its proposed schedule of activities before receiving credit for this category. Farm and agricultural activities shall occur on at least one acre of the property. Eligible land shall be zoned to allow agricultural uses and be owned by the same owner or held under the same ownership. Land receiving credit for this category may not receive credit for the contiguous parcels under separate ownership category;

7. Forest stewardship land - five points. "Forest stewardship land" means property that is managed according to an approved forest stewardship plan and that is not enrolled in the designated forestland program under chapter 84.33 RCW. The property shall contain at least four acres of contiguous forestland, which may include land undergoing reforestation, according to the approved plan. The owner shall have and

implement a forest stewardship plan approved by the department. The forest stewardship plan may emphasize forest retention, harvesting, or a combination of both. Land receiving credit for this category may not receive credit for the resource restoration (~~or rural stewardship land categories~~) category;

8. Historic landmark or archeological site: buffer to a designated site - three points. "Historic landmark or archaeological site: buffer to a designated site" means property adjacent to land constituting or containing a designated county or local historic landmark or archeological site, as determined by King County's historic preservation officer or by a manager of a certified local government program in the jurisdiction in which the property is located. A property shall have a plant community in which native plants are dominant and provide a significant buffer for a designated landmark or archaeological site listed on the county or other certified local government list or register of historic places or landmarks. "Significant buffer" means land and plant communities that provide physical, visual, noise, or other barriers and separation from adverse effects to the historic resources due to adjacent land use;

9. Historic landmark or archeological site: designated site – five points. "Historic landmark or archaeological site: designated site" means land that constitutes or contains a historic landmark designated by King County or other certified local government program in the jurisdiction in which the property is located. Historic landmarks include buildings, structures, districts, or sites of significance in the county's historic or prehistoric heritage, such as Native American settlements, trails, pioneer settlements, farmsteads, roads, industrial works, bridges, burial sites, prehistoric and historic archaeological sites, or traditional cultural properties. A property shall be listed

on a county or other certified local government list or register of historic places or landmarks for which there is local regulatory protection. Eligible property may include property that contributes to the historic character within designated historic districts, as defined by the historic preservation officer of King County or other certified local government jurisdiction. The King County historic preservation officer shall make the determination on eligibility;

10. Historic landmark or archeological site: eligible site - three points.

"Historic landmark or archaeological site: eligible site" means land that constitutes or contains a historic property that has the potential of being designated by a certified local government jurisdiction, including buildings, structures, districts, or sites of significance in the county's historic or prehistoric heritage, such as Native American settlements, pioneer settlements, farmsteads, roads, industrial works, bridges, burial sites, prehistoric and historic archaeological sites, or traditional cultural properties. To be eligible, the historic preservation officer of King County or other certified local government program in the jurisdiction in which the property is located shall determine the property meets the jurisdiction's criteria for designation and listing on the county or other local register of historic places or landmarks for which there is local regulatory protection. Eligible property may include contributing property within designated historic districts. Property listed in the state or national Registers of Historic Places may qualify under this category;

11. Public recreation area - five points. "Public recreation area" means land

devoted to providing active or passive recreation use or that complements or substitutes for recreation facilities characteristically provided by public agencies. Use of motorized vehicles is prohibited, except for golf carts on golf courses, for maintenance, or for

531 medical, public safety, or police emergencies. The facilities shall be open to the general  
532 public or to specific public user groups, such as youth, seniors, or people with disabilities.  
533 A property shall be identified by the responsible agency within whose jurisdiction the  
534 property is located as meeting the definition of public recreation area. The property  
535 owner shall use any best practices defined in K.C.C. chapter 21A.06. If a fee is charged  
536 for use, it shall be comparable to the fee charged by a similar public facility;

537 12. Rural open space - five points. "Rural open space" means an area of ~~((ten))~~  
538 five or more contiguous acres of open space located outside of the Urban Growth Area as  
539 identified in the King County Comprehensive Plan that:

540 a. has a plant community in which native plants are dominant; or  
541 b. is former open farmland, woodlots, scrublands, or other lands that are in the  
542 process of being replanted with native vegetation and for which the property owner is  
543 implementing an approved farm management, ecological enhancement, forest  
544 stewardship, ~~((rural stewardship,))~~ or resource restoration plan acceptable to the  
545 department;

546 13. ~~((Rural stewardship land - five points. "Rural stewardship land" means land~~  
547 ~~zoned RA (rural area), A (agricultural), or F (forest), that has an implemented rural~~  
548 ~~stewardship plan under K.C.C. chapter 21A.24 acceptable to the department. On RA-~~  
549 ~~zoned properties, the approved rural stewardship plan shall meet the goals and standards~~  
550 ~~of K.C.C. 21A.24.055. On A- and F-zoned properties, credit for this category is allowed~~  
551 ~~if the plan meets the goals of K.C.C. 21A.24.055. A rural stewardship plan includes, but~~  
552 ~~is not limited to, identification of critical areas, location of structures and significant~~  
553 ~~features, site-specific best management practices, a schedule for implementation, and a~~

~~plan for monitoring as provided in K.C.C. 21A.24.055. To be eligible as rural  
stewardship land, the open space shall be at least one acre and feature a plant community  
in which native plants are dominant or be in the process of native vegetation restoration,  
reforestation, or enhancement. Land receiving credit for this category may not receive  
credit for the ecological enhancement land, resource restoration, or forest stewardship  
land categories;~~

14.)) Scenic resource, viewpoint, or view corridor – five points.

a. "Scenic resource" means an area of natural or recognized cultural features  
visually significant to the aesthetic character of the county. The site shall be significant  
to the identity of the local area, be visible to a significant number of the general public  
from public rights-of-way, be of sufficient size to substantially preserve the scenic  
resource value, and enroll at least ten acres of open space.

b. A "viewpoint" means a property that provides a view of an area visually  
significant to the aesthetic character of the county. A site shall provide a view of a scenic  
natural or recognized cultural resource in King County or other visually significant area,  
allow unlimited public access, and be identified by a permanent sign readily visible from  
a road or other public right-of-way.

c. A "view corridor" means a property that contributes to the aesthetics of a  
recognized view corridor critical to maintaining a public view of a visually significant  
scenic natural or recognized cultural resource. The site shall contain at least one acre of  
open space that contributes to a view corridor visible to the public and that provides  
views of a scenic natural resource area or recognized cultural resource significant to the  
local area. The site shall have ((a)) significant cultural areas and contain significant

577 inventoried or designated historic properties, as determined by the King County historic  
578 preservation officer or officer of another certified local government program in the  
579 jurisdiction in which the property is located in. Eligibility is subject to determination by  
580 the department or applicable jurisdiction;

581           ~~((15.))~~ 14. Significant plant or ecological site - five points. "Significant plant or  
582 ecological site" means an area that meets the criteria for Element Occurrence established  
583 under the Washington Natural Heritage Program authorized by chapter 79.70 RCW. An  
584 Element Occurrence is a particular, on-the-ground observation of a rare species or  
585 ecosystem. An eligible site shall be listed as an Element Occurrence by the Washington  
586 Natural Heritage Program or be identified as a property that meets the criteria for an  
587 Element Occurrence. The identification shall be confirmed by a qualified expert  
588 acceptable to the department in order to qualify. The department shall notify the  
589 Washington Natural Heritage Program of any verified Element Occurrence on an  
590 enrolling property. Commercial nurseries, arboretums, or other maintained garden sites  
591 with native or nonnative plantings are ineligible for this category;

592           ~~((16.))~~ 15. Significant wildlife or ~~((salmonid))~~ fish habitat - five points.

593           a. "Significant wildlife or ~~((salmonid))~~ fish habitat" means:

594           (1) an area used by animal species listed as endangered, threatened, sensitive,  
595 or candidate by the Washington state Department of Fish and Wildlife or Department of  
596 Natural Resources or used by species of local ~~((significance))~~ importance that are listed  
597 by the King County Comprehensive Plan or a local jurisdiction;

598           (2) an area where the species listed in subsection C.~~((16))~~15.a.(1) of this  
599 section are potentially found with sufficient frequency for critical ecological processes,  
600 such as reproduction, nesting, rearing, wintering, feeding, or resting, to occur;

601           (3) a site that meets the criteria for priority habitats as defined by the  
602 Washington state Department of Fish and Wildlife and that is so listed by the King  
603 County Comprehensive Plan or by the local jurisdiction in which the property is located;  
604 or

605           (4) a site that meets criteria for a wildlife habitat conservation area as defined  
606 by the department or a local jurisdiction.

607           b. To be eligible, the department, by its own determination or by expert  
608 determination acceptable to the department, shall verify that qualified species are present  
609 on the property or that the land fulfills the functions described in subsection C.~~((16))~~15.a.  
610 of this section. To receive credit for ~~((salmonid))~~ fish habitat, the owner shall provide a  
611 buffer at least fifteen percent greater in width than required by any applicable regulation.  
612 Property consisting mainly of disturbed or fragmented open space determined by the  
613 department as having minimal wildlife habitat significance is ineligible;

614           ~~((17.))~~ 16. Special animal site - three points. "Special animal site" means a site  
615 that includes a wildlife habitat network identified by the King County Comprehensive  
616 Plan or individual jurisdictions through the Growth Management Act, chapter 36.70A  
617 RCW, or a biodiversity area and corridor identified by the Washington state Department  
618 of Fish and Wildlife's priority habitats and species project as of the date of the application  
619 as identified by King County or local or state jurisdiction or by expert verification  
620 acceptable to the department or local jurisdiction. Property consisting mainly of

disturbed or fragmented open space determined by the department to have minimal wildlife habitat significance is ineligible for this category;

~~((18.))~~ 17. Surface water quality buffer – five, eight, or ten total points. "Surface water quality buffer" means an undisturbed area that has a plant community in which native plants are dominant abutting a lake, pond, stream, shoreline, wetland, or marine waters on or abutting the property, that provides buffers beyond that required by any applicable regulation. To receive five points, the buffer shall be at least fifty percent wider than the buffer required by any applicable regulation. To receive eight points, the buffer shall be at least two times the required width. To receive ten points, the buffer shall be at least three times the required width. The qualifying buffer shall be longer than twenty-five feet and shall be preserved from clearing or maintenance, unless this area is part of a department-approved ecological enhancement, farm management, forest stewardship, ~~((rural stewardship,))~~ or resource restoration plan. Grazing use by livestock on such land is prohibited;

~~((19.))~~ 18. Urban open space - five points.

a. "Urban open space" means land located within the boundaries of a city or within the Urban Growth Area that has a plant community in which native plants are dominant and that under the applicable zoning is eligible for more-intensive development or use. The enrolling area shall be at least one acre, or be at least one-half acre if the land meets one of the following criteria:

(1) the land conserves and enhances natural or scenic resources;

(2) the land protects streams or water supply;

643 (3) the land promotes conservation of soils, wetlands, beaches, or tidal  
644 marshes;

645 (4) the land enhances the value to the public of adjacent parks, forests,  
646 wildlife preserves, nature reservations or sanctuaries, or other open space;

647 (5) the land enhances recreation opportunities for the general public; or

648 (6) the land preserves visual quality along highways, roads, and streets or  
649 scenic vistas.

650 b. Owners of noncontiguous properties that together meet the minimum  
651 acreage requirement may jointly apply under this category if each property is closer than  
652 seventy-five feet to one other property in the application and if each property contains an  
653 enrolling open space area at least as large as the minimum zoned lot size; and

654 ~~((20-))~~ 19. Watershed protection area - five points. "Watershed protection area"  
655 means property contributing to the forest cover that provides run-off reduction and  
656 groundwater protection. The property shall consist of contiguous native forest or be in  
657 the process of reforestation. The enrolling forested area shall consist of additional forest  
658 cover beyond that required by county or applicable local government regulation and shall  
659 be at least one acre or sixty-five percent of the property acreage, whichever is greater. If  
660 reforestation or improvements to the forest health are necessary, the property owner shall  
661 provide and implement an ecological enhancement, a forest stewardship, or resource  
662 restoration(~~((, or rural stewardship))~~) plan that addresses this need and is acceptable to the  
663 department.

664 D. Property qualifying for an open space category in subsection C. of this section  
665 may receive credit for additional points as follows:

666           1. Conservation easement or historic preservation easement - eighteen points.  
667       "Conservation easement or historic preservation easement" means land on which an  
668       easement is voluntarily placed that restricts, in perpetuity, further potential development  
669       or other uses of the property. The easement is subject to approval by the department and  
670       shall be recorded with the King County recorder's office or its successor. The easement  
671       shall be conveyed to the county or to an organization acceptable to the department, such  
672       as a land trust or conservancy. Historic preservation easements are subject to approval by  
673       the historic preservation officer of King County or of the local government jurisdiction in  
674       which the property is located. An easement required by zoning, subdivision conditions,  
675       or other land use regulation is not eligible unless an additional substantive easement area  
676       is provided beyond that otherwise required;

677           2. Contiguous parcels under separate ownership - two points.

678           a. "Contiguous parcels under separate ownership" means at least two or more  
679       parcels under different ownership where either:

680               (1) the enrolling parcels and open space acreage abut each other without a  
681       significant human-made barrier separating them; or

682               (2) the enrolling parcels do not abut each other, but abut a publicly owned  
683       open space, without a significant human-made barrier separating the publicly owned open  
684       space and the open space portion of the parcels seeking open space classification.

685           b. Award of this category requires a single application by multiple owners and  
686       parcels with identical qualifying public benefit rating system resources. Only a single  
687       application fee is required.

c. Contiguous parcels of land with the same qualifying public benefit rating system resources are eligible for treatment as a single parcel if open space classification is sought under the same application except as otherwise prohibited by the farm and agricultural conservation land category. Each parcel need not meet the minimum acreage requirements for a resource category so long as the total area of all enrolling land combined meets any required minimum acreage requirements. The owners of each parcel included in the application shall agree to identical terms and conditions for enrollment in the program.

d. Individual parcels or portions of parcels may be withdrawn or removed from open space classification, consistent with all applicable rules and regulations. The continued eligibility of all parcels and associated acreage remaining in open space classification accepted under the same application is dependent upon the continued qualification for a resource category or categories.

e. Points are awarded for each participating owner above one owner and accrue to all owners of a single application. The withdrawal or removal of all enrolled acreage associated with an owner results in the loss of two points for each remaining owner;

3. Easement and access – thirty-five points. "Easement and access" means that the property has at least one qualifying open space resource, unlimited public access or limited public access due to resource sensitivity, and a conservation easement or historic preservation easement in perpetuity in a form and with conditions acceptable to the department. A property shall only be eligible in this category if it receives credit for an open space category and for the conservation easement or historic easement in perpetuity category. The owner shall agree to allow public access to the portion of the property

designated for public access in the easement. An easement required by zoning, subdivision conditions, or other land use regulation is not eligible, unless there is additional easement area beyond that required. Credit for this category may not overlap with the equestrian-pedestrian-bicycle trail linkage;

4. Public access - points depend on type and frequency of access allowed.

"Public access " means the general public is allowed access on an ongoing basis for uses such as recreation, education, or training. Access shall be allowed on the portion of the property that is designated for public access. The landowner may impose reasonable restrictions on access, such as limiting use to daylight hours, agreed to by the department. No physical barriers may limit reasonable public access or negatively affect an open space resource. A property owner shall demonstrate that the property is open to public access and is used by the public. Award of public access points for historic properties is subject to approval by the historic preservation officer of King County or a certified officer of another local government jurisdiction in which the property is located. The property owner may be required to furnish and maintain signage according to county specifications.

a. Unlimited public access - five points. Year-round access by the general public is allowed without special arrangements with the property owner.

b. Limited public access (~~because of~~) due to resource sensitivity - five points.

Access may be reasonably limited by the property owner due to the sensitive nature of the resource, with access provided only to appropriate user groups. The access allowed should generally be for an educational, scientific, or research purpose and may require special arrangements with the owner.

734 c. Seasonally limited public access - three points. Access by the public is  
735 allowed only for part of the year due to due to seasonal conditions, as mutually agreed to  
736 by the landowner and the department.

737 d. Environmental education access - three points. The landowner enters into  
738 an agreement with a school, with an organization with 26 U.S.C. Sec. 501(c)(3) tax  
739 status, or, with the agreement of the department, with another community organization  
740 that allows membership by the general public to provide environmental education to its  
741 members or the public at large. The department shall verify that the enrolled portion of  
742 the property has value for environmental education purposes.

743 e. None or members-only - zero points. No public access is allowed or the  
744 access is allowed only by members of the organization using or owning the land; and

745 5. Resource restoration – five points. "Resource restoration" means restoration  
746 of an enrolling area of property benefiting an area in an open space resource category.  
747 Emphasis is placed on the restoration of native vegetation associated with anadromous  
748 fish rearing habitat, riparian zones, migration corridors and wildlife, forest, stream, and  
749 wetland habitats. The owner shall provide and implement a restoration plan approved by  
750 the department. The plan may be developed in cooperation with a natural resource expert  
751 or agency. The approved restoration plan shall, at a minimum, include a purpose  
752 statement, a description of restoration work to be done, a detailed site map of the area to  
753 be restored, a specific timeline for the restoration activities to be completed and a  
754 monitoring schedule for the restoration project's first five years. Historic resource  
755 restoration is subject to approval by the King County historic preservation officer or  
756 officer of another certified local government in the jurisdiction in which the property is

located and shall be accompanied by a long-term maintenance plan. The owner shall also provide to the department a yearly monitoring report for at least five years following enrollment in the public benefit rating system program. The report shall describe the progress and success of the restoration project and shall include photographs to document the success. Land receiving credit for this category may not receive credit for the ecological enhancement land((;)) or forest stewardship land(~~(; or rural stewardship land)~~) categories.

SECTION 7. Ordinance 6949, Section 6, as amended, and K.C.C. 20.44.040 are hereby amended to read as follows:

A.1. King County adopts the standards and procedures specified in WAC 197-11-300 through 197-11-390 and 197-11-800 through 197-11-890 for determining categorical exemptions and making threshold determinations (~~((subject to the following:))~~).

~~((1.))~~ 2. The ~~((following exempt threshold levels are hereby established in accordance with WAC 197-11-800(1)(c) for the exemptions in WAC 197-11-800(1)(b)))~~ exemptions in this section apply to all licenses and permits required to undertake a proposal. To be exempt, the proposal shall be equal or smaller to the exemption level. The exemptions in subsection A.3. of this section shall not apply when the proposal:

a. is undertaken wholly or partly on lands covered by water;

b. requires a license governing discharges to water that is not exempt under RCW 43.21C.0383;

c. requires a license governing emissions to air that is not exempt under RCW 43.21C.0381 or WAC 197-11-800(7) or (8); or

d. requires a land use decision that is not exempt under WAC 197-11-800(6).

780           3. The county adopts the following thresholds for minor new construction under  
781 WAC 197-11-800(1):

782           a. The construction or location of ~~((any residential structures of))~~ up to twenty  
783 dwelling units within the ~~((boundaries of an u))~~ Urban ~~((g))~~ Growth ~~((a))~~ Area~~((;))~~ or ~~((of~~  
784 ~~any residential structures of))~~ up to eight dwelling units outside ~~((of))~~ the ~~((boundaries of~~  
785 ~~an u))~~ Urban ~~((g))~~ Growth ~~((a))~~ Area;

786           b. The construction of a barn, loafing shed, farm equipment storage building,  
787 produce storage or packing structure, or similar agricultural structure, covering up to  
788 thirty thousand square feet on land zoned agricultural, or up to fifteen thousand square  
789 feet in all other zones, and to be used only by the property owner or agent in the conduct  
790 of farming the property. This exemption shall not apply to feed lots;

791           c. The construction of an office, school, commercial, recreational, service, or  
792 storage building with up to twelve thousand square feet of gross floor area, and with  
793 associated parking facilities designed for up to forty automobiles;

794           d. The construction of a parking lot designed for up to forty automobiles; and  
795           e. ~~((Any f))~~ Fill or excavation ~~((of))~~ as follows:

796                (1) up to five hundred cubic yards throughout the total lifetime of the fill or  
797 excavation ~~((and))~~ for activities not otherwise specified in this section;

798                (2) any fill or excavation necessary for the projects in subsections A.3.a.  
799 through A.3.d. of this section;

800                (3) any fill or excavation classified as a class I, II, or III forest practice under  
801 RCW 76.09.050 or regulation thereunder~~((: The categorical exemption threshold shall~~  
802 ~~be)); and~~

803                   (4) up to one hundred cubic yards for any fill or excavation that is in ((an  
804   aquatic area, wetland,)) a steep slope, ((or)) landslide, or alluvial fan hazard area. ((If the  
805   proposed action is to remove from or replace fill in an aquatic area, wetland, steep slope  
806   or landslide hazard area to correct a violation, the threshold shall be five hundred cubic  
807   yards.))

808                   2.)) 4. The determination of whether a proposal is categorically exempt shall be  
809   made by the county department that serves as lead agency for that proposal.

810                   B. The mitigated DNS provision of WAC 197-11-350 shall be enforced as  
811   follows:

812                   1. If the department issues a mitigated DNS, conditions requiring compliance  
813   with the mitigation measures which were specified in the application and environmental  
814   checklist shall be deemed conditions of any decision or recommendation of approval of  
815   the action.

816                   2. If at any time the proposed mitigation measures are withdrawn or  
817   substantially changed, the responsible official shall review the threshold determination  
818   and, if necessary, may withdraw the mitigated DNS and issue a DS.

819                   NEW SECTION. SECTION 8. There is hereby added to K.C.C. chapter 21A.06  
820   a new section to read as follows:

821                   Active nest: a nest or breeding site that is actively being used, built, or repaired  
822   by birds.

823                   SECTION 9. Ordinance 18626, Section 11, as amended, and K.C.C. 21A.06.039  
824   are hereby amended to read as follows:

825                   Agricultural products: products that include, but are not limited to:

- 826 A. Horticultural, viticultural, floricultural, and apiary products;
- 827 B. Livestock and livestock products;
- 828 C. Animal products, including, but not limited to, upland finfish, dairy products,
- 829 meat, poultry, and eggs;
- 830 D. Feed or forage for livestock;
- 831 E. ~~((Christmas-t))Trees((,-hybrid cottonwood and similar hardwood trees))~~ grown
- 832 as crops and harvested within twenty years of planting; and
- 833 F. Turf, sod, seed, and related products.

834 NEW SECTION. SECTION 10. There is hereby added to K.C.C. chapter

835 21A.06 a new section to read as follows:

836 Alluvial fan: a fan-shaped deposit of sediment and organic debris formed where a

837 stream flows or has flowed out of an upland onto a flat plain or valley floor due to a

838 sudden change in sediment transport capacity, such as a significant change in slope or

839 confinement.

840 NEW SECTION. SECTION 11. There is hereby added to K.C.C. chapter

841 21A.06 a new section to read as follows:

842 Alluvial fan hazard area: any area on an alluvial fan that is susceptible to natural

843 hazards such as episodic inundation, sedimentation, and erosional impacts. Alluvial fan

844 hazard areas are a type of geological hazard area.

845 SECTION 12. Ordinance 15051, Section 7, as amended, and K.C.C.

846 21A.06.072C are hereby amended to read as follows:

847 A. Aquatic areas include:

848 1. ~~((Nonwetland w))~~Water features ~~((including: all))~~, such as shorelines of the  
849 state, rivers, streams, marine waters, lakes, ponds, and other bodies of open water~~((, such~~  
850 ~~as lakes, ponds and reservoirs))~~;

851 2. Impoundments, ~~((such as))~~ which includes bodies of water collected in  
852 reservoirs, dams, or ((ponds,)) through natural disturbance events, if any portion of the  
853 contributing water is from a ~~((nonwetland))~~ water feature listed in subsection A.1. of this  
854 section; ~~((and))~~

855 3. Above~~((-))~~ground open water conveyance systems, such as ditches, if any  
856 portion of the contributing water is used by fish; and

857 4. Aboveground or underground water conveyance system, if any portion of  
858 the contributing water is from ((either)) a wetland or a ((nonwetland)) water feature listed  
859 in subsection A.1., ((or)) A.2., or A.3. of this section((, or both)).

860 B. "Aquatic areas" does not include water features where the source of  
861 contributing water is entirely artificial, including, but not limited to, ground~~((-))~~water  
862 wells, and any irrigation delivery systems, irrigation infrastructure, irrigation canals, or  
863 drainage ditches that lie within the boundaries of, and are maintained by, a port district or  
864 an irrigation district or company.

865 NEW SECTION. SECTION 13. There is hereby added to K.C.C. chapter  
866 21A.06 a new section to read as follows:

867 Aquatic area functions: the physical, biological, chemical, and geologic  
868 interactions among different components of the environment that occur within aquatic  
869 areas. Aquatic area functions include, but are not limited to, functions that improve water  
870 quality, functions that provide for the availability of surface water and groundwater by

871 acting as recharge and discharge areas, functions to allow the conveyance of water,  
872 sediment, organisms, and other organic matter, functions that facilitate food chain  
873 production and nutrient cycling, and functions that provide habitat for plants and animals,  
874 including nesting, rearing, feeding, and resting habitat.

875 SECTION 14. Ordinance 10870, Section 70, as amended, and K.C.C.  
876 21A.06.122 are hereby amended to read as follows:

877 Buffer: a designated area contiguous to a ~~((steep slope or landslide hazard area~~  
878 ~~intended to protect slope stability, attenuation of surface water flows and landslide~~  
879 ~~hazards or a designated area contiguous to and))~~ critical area that is intended to protect  
880 ~~and be ((an)) integral ((part of an aquatic area or wetland))~~ to the functions and values of  
881 the critical area and reduce impacts from adjacent land uses.

882 NEW SECTION. SECTION 15. There is hereby added to K.C.C. chapter  
883 21A.06 a new section to read as follows:

884 Climate-adaptive plants: plant species identified by the department of natural  
885 resources and parks currently or formerly native to the surrounding ecoregion that are  
886 predicted to maintain their abundance under climate change.

887 SECTION 16. Ordinance 10870, Section 80, as amended, and K.C.C.  
888 21A.06.200 are hereby amended to read as follows:

889 Coal mine hazard area: an area directly underlain, adjacent to, or ~~((directly))~~  
890 affected by operative or abandoned subsurface coal mine workings such as adits, tunnels,  
891 drifts, or air shafts.

892 SECTION 17. Ordinance 11481, Section 1, and K.C.C. 21A.06.253C are hereby  
893 amended to read as follows:

894 Critical aquifer recharge area: an area with a critical recharging effect on aquifers  
895 used for potable water or areas where an aquifer is susceptible to reduced recharge, and  
896 designated on the critical aquifer recharge area map adopted by K.C.C. 21A.24.311 ~~((that~~  
897 ~~has))~~. Critical aquifer recharge areas include areas with a high susceptibility to ground((  
898 ))water contamination or an area of medium susceptibility to ground((-))water  
899 contamination that is located within a sole source aquifer or within an area approved in  
900 accordance with chapter 246-290 WAC as a wellhead protection area for a municipal or  
901 district drinking water system, or an area over a sole source aquifer and located on ~~((an~~  
902 ~~island surrounded by saltwater))~~ Vashon-Maury Island. Susceptibility to ground((  
903 ))water contamination occurs where there is a combination of permeable soils, permeable  
904 subsurface geology and ground((-))water close to the ground surface.

905 SECTION 18. Ordinance 15051, Section 24, and K.C.C. 21A.06.254 are hereby  
906 amended to read as follows:

907 Critical area: any area that is subject to natural hazards or a land feature that  
908 supports unique, fragile, or valuable natural resources including fish, wildlife, or other  
909 organisms or their habitats or such resources that carry, hold, or purify water in their  
910 natural state. "Critical area" includes the following areas:

- 911 A. ~~((Aquatic areas;~~
- 912 ~~B. Coal mine hazard areas;~~
- 913 C.)) Critical aquifer recharge areas;
- 914 ~~((D. Erosion hazard areas;~~
- 915 ~~E. Flood hazard areas;~~
- 916 ~~F. Landslide hazard areas;~~

917 ~~G. Seismic hazard areas;~~  
918 ~~H. Steep slope hazard areas;~~  
919 ~~I. Volcanic hazard areas;~~  
920 ~~J.)~~ B. Frequently flooded areas, regulated as flood hazard areas, including:  
921 1. Floodplains;  
922 2. Special flood hazard areas, as shown on the Flood Insurance Rate Map;  
923 3. Zero-rise flood fringe;  
924 4. Zero-rise floodways;  
925 5. FEMA floodways; and  
926 6. Channel migration zones;  
927 C. Fish and wildlife habitat conservation areas, including:  
928 1. Aquatic areas;  
929 2. Riparian areas;  
930 3. Wildlife habitat conservation areas; and  
931 4. Wildlife habitat networks;  
932 D. Geologically hazardous areas, including:  
933 1. Alluvial fan hazard areas;  
934 2. Channel migration zones;  
935 3. Coal mine hazard areas;  
936 4. Erosion hazard areas;  
937 5. Landslide hazard areas;  
938 6. Seismic hazard areas;  
939 7. Steep slope hazard areas;

940           8. Tsunami hazard areas; and

941           9. Volcanic hazard areas; and

942           E. Wetlands((;

943           ~~K. Wildlife habitat conservation areas; and~~

944           ~~L. Wildlife habitat networks)).~~

945           NEW SECTION. SECTION 19. There is hereby added to K.C.C. chapter

946   21A.06 a new section to read as follows:

947           Critical freshwater habitat: portions of streams, rivers, wetlands, and lakes within  
948   shorelines of the state, and floodplains designated as shorelines of the state in the  
949   shoreline master program.

950           NEW SECTION. SECTION 20. There is hereby added to K.C.C. chapter

951   21A.06 a new section to read as follows:

952           Debris flow: a moving mass of rock fragments, soil, and mud, where more than  
953   half of the particles are larger than sand size.

954           NEW SECTION. SECTION 21. There is hereby added to K.C.C. chapter

955   21A.06 a new section to read as follows:

956           Ecological professional: a person having a degree in ecology, wildlife biology,  
957   wetland biology, fisheries, botany, soil science, environmental science, natural resource  
958   management, or a closely related field, with a minimum of five years of professional  
959   experience related to the subject ecological field. Professional certification in a relevant  
960   ecological field can be substituted for two years of professional experience.

961           SECTION 22. Ordinance 10870, Section 123, as amended, and K.C.C.

962   21A.06.415 are hereby amended to read as follows:

963 Erosion hazard area: ~~((an))~~ a geologically hazardous area underlain by soils that  
964 ~~((is))~~ are subject to severe erosion when disturbed. ~~((These))~~ Such soils include, but are  
965 not limited to~~((;))~~:

966 A. ~~((t))~~ Those classified as having a severe to very severe erosion hazard  
967 according to the United States Department of Agriculture ~~((Soil))~~ Natural Resources  
968 Conservation Service, the 1990 Snoqualmie Pass Area Soil Survey, the 1973 King  
969 County Soils Survey or any subsequent revisions or addition by or to these sources ~~((such~~  
970 ~~as))~~:

971 B. ~~((a))~~ Any occurrence of River Wash ("Rh") or Coastal Beaches ("Cb"); and

972 C. ~~((a))~~ Any of the following when they occur on slopes inclined at fifteen percent  
973 or more:

974 ~~((A. The))~~ 1. Alderwood gravely sandy loam ("AgD");

975 ~~((B. The))~~ 2. Alderwood and Kitsap soils ("AkF");

976 ~~((C. The))~~ 3. Beausite gravely sandy loam ("BeD" and "BeF");

977 ~~((D. The))~~ 4. Kitsap silt loam ("KpD");

978 ~~((E. The))~~ 5. Ovall gravely loam ("OvD" and "OvF");

979 ~~((F. The))~~ 6. Ragnar fine sandy loam ("RaD"); and

980 ~~((G. The))~~ 7. Ragnar-Indianola Association ("RdE").

981 SECTION 23. Ordinance 15051, Section 41, and K.C.C. 21A.06.451 are hereby  
982 amended to read as follows:

983 Farm field access drive: a~~((n))~~ paved or impervious ~~((surface constructed to~~  
984 ~~provide a fixed))~~ route or path used for moving livestock, produce, equipment, or  
985 supplies to and from farm fields, and farm structures for agricultural activities.

986            NEW SECTION. SECTION 24. There is hereby added to K.C.C. chapter  
987    21A.06 a new section to read as follows:

988            Fish and wildlife habitat conservation areas:

989            A. Areas that serve a critical role in sustaining needed habitats and species for the  
990    functional integrity of the ecosystem, and which, if altered, may reduce the likelihood  
991    that the species will persist over the long term. These areas may include, but are not  
992    limited to, rare or vulnerable ecological systems, communities, and habitat or habitat  
993    elements including seasonal ranges, breeding habitat, riparian areas, aquatic areas,  
994    wildlife habitat network, and areas with high population density or species richness.

995            B. Fish and wildlife habitat conservation areas do not include artificial water  
996    carrying features or constructs such as irrigation delivery systems, irrigation  
997    infrastructure, irrigation canals, or drainage ditches that lie within the boundaries of, and  
998    are maintained by, a port district or an irrigation district or company.

999            SECTION 25. K.C.C. 21A.06.578, as amended by this ordinance, is hereby  
1000    recodified as a new section in K.C.C. chapter 21A.06 to follow K.C.C. 21A.06.468.

1001            SECTION 26. Ordinance 15051, Section 64, and K.C.C. 21A.06.578 are hereby  
1002    amended to read as follows:

1003            ~~((Habitat, f))~~ Fish habitat: habitat that is used by native fish species, including  
1004    anadromous or resident salmonids, at any life stage at any time of the year ~~((including~~  
1005    ~~potential habitat likely to be used by anadromous or resident salmonids))~~. "Fish habitat"  
1006    includes streams, wetlands, lakes, off-channel habitat, floodplains, tidal flats, tidal  
1007    channels, and potential habitat that is upstream ~~((of,))~~ or landward of ~~((;))~~ human-made  
1008    barriers that could be accessible to ~~((, and))~~ or ~~((could be))~~ used by ~~((;))~~ fish upon removal

1009 of the barriers. (~~((This includes off-channel habitat, flood refuges, tidal flats, tidal~~  
1010 ~~channels, streams and wetlands.))~~)

1011 NEW SECTION. SECTION 27. There is hereby added to K.C.C. chapter  
1012 21A.06 a new section to read as follows:

1013 Geologically hazardous areas: areas susceptible to erosion, sliding, earthquake, or  
1014 other geological events. Areas classified as geologically hazardous areas include:

1015 A. Alluvial fan hazard areas;

1016 B. Channel migration zones;

1017 C. Coal mine hazard areas;

1018 D. Erosion hazard areas;

1019 E. Landslide hazard areas;

1020 F. Seismic hazard areas;

1021 G. Steep slope hazard areas;

1022 H. Tsunami hazard areas; and

1023 I. Volcanic hazard areas.

1024 NEW SECTION. SECTION 28. There is hereby added to K.C.C. chapter  
1025 21A.06 a new section to read as follows:

1026 Geological professional: a geotechnical engineer or geologist, licensed in  
1027 Washington state and experienced in analyzing geologic, hydrologic, and groundwater  
1028 flow systems, as well as, preparing reports for the relevant geological subdisciplines.

1029 NEW SECTION. SECTION 29. There is hereby added to K.C.C. chapter  
1030 21A.06 a new section to read as follows:

1031           Grazing area buffer: a designated area contiguous to a wetland or aquatic area  
1032 from which livestock are excluded.

1033           SECTION 30. K.C.C. 21A.06.1331, as amended by this ordinance, is hereby  
1034 recodified as a new section in K.C.C. chapter 21A.06 to follow K.C.C. 21A.06.585.

1035           SECTION 31. Ordinance 15051, Section 107, and K.C.C. 21A.06.1331 are  
1036 hereby amended to read as follows:

1037           ~~((Free, hazard))~~ Hazard tree: any tree with a structural defect, combination of  
1038 defects or disease resulting in structural defect that, under the normal range of  
1039 environmental conditions at the site, will result in the loss of a major structural  
1040 component of that tree in a manner that will:

1041           A. Damage a ~~((residential structure))~~ building, ~~((or))~~ accessory structure, or  
1042 parking for a residential use, place of employment, ~~((or))~~ public assembly ~~((or approved~~  
1043 ~~parking for a residential structure or accessory structure or place of employment or public~~  
1044 ~~assembly))~~);

1045           B. Damage a ~~((non-approved))~~ road or utility facility; or

1046           C. Prevent emergency access ~~((in the case of medical hardship))~~.

1047           SECTION 32. Ordinance 10870, Section 176, as amended, and K.C.C.  
1048 21A.06.680 are hereby amended to read as follows:

1049           Landslide hazard area: an area subject to severe risk of landslide, such as:

1050           A. An area with a combination of:

1051               1. Slopes steeper than fifteen percent of inclination;

1052               2. Impermeable soils, such as silt and clay, frequently interbedded with granular  
1053 soils, such as sand and gravel; and

1054 3. Springs or ground water seepage;

1055 B. An area that has shown movement during the Holocene epoch, which is from  
1056 ten thousand years ago to the present, or that is underlain by mass wastage debris from  
1057 that epoch;

1058 C. Any area potentially unstable as a result of rapid stream incision, stream bank  
1059 erosion or undercutting by wave action;

1060 D. An area that shows evidence of or is at risk from snow avalanches; or

1061 E. An area located on an alluvial fan(~~((, presently or potentially subject to))~~) that is  
1062 susceptible to episodic inundation ((by debris flows or deposition of stream-transported  
1063 sediments)) sedimentation, and erosional impacts.

1064 SECTION 33. Ordinance 10870, Section 190, as amended, and K.C.C.  
1065 21A.06.750 are hereby amended to read as follows:

1066 Mitigation: an action taken to compensate for (~~((adverse))~~) unavoidable impacts to  
1067 the environment resulting from a development activity or alteration after avoidance and  
1068 mitigation sequencing is applied.

1069 NEW SECTION. SECTION 34. There is hereby added to K.C.C. chapter  
1070 21A.06 a new section to read as follows:

1071 Notice of map amendment:

1072 A. A letter issued by the department of natural resources and parks indicating that  
1073 the classification of a critical area has been changed on one of the following critical areas  
1074 maps adopted by ordinance or public rule:

1075 1. Critical aquifer recharge areas;

1076 2. Wildlife habitat networks;

1077 3. Channel migration zones; or

1078 4. Flood hazard areas.

1079 B. The notice of map amendment may indicate that an area has been reclassified,  
1080 declassified, or newly classified as a critical area.

1081 NEW SECTION. SECTION 35. There is hereby added to K.C.C. chapter  
1082 21A.06 a new section to read as follows:

1083 Revegetation: the reestablishment of vegetation within an area that is well suited to  
1084 thrive in the area.

1085 NEW SECTION. SECTION 36. There is hereby added to K.C.C. chapter  
1086 21A.06 a new section to read as follows:

1087 Riparian area: a designated area contiguous to an aquatic area that provides fish and  
1088 wildlife habitat, protects adjacent aquatic fish and wildlife species and habitat, and protects  
1089 water quality. Riparian areas protect the functions and values of aquatic areas and reduce  
1090 impacts from adjacent land uses through various physical, chemical, or biological processes.

1091 SECTION 37. Ordinance 10870, Section 243, as amended, and K.C.C.  
1092 21A.06.1015 are hereby amended to read as follows:

1093 Salmonid: a fish native to the Puget Sound region that is a member of the fish  
1094 family Salmonidae, including(~~(, but not limited to)~~):

1095 A. Chinook, coho, chum, sockeye, and pink salmon;

1096 B. Rainbow, steelhead, and cutthroat (~~((salmon, which are also known as))~~) trout;

1097 C. (~~Brown trout;~~

1098 ~~D. Brook, b))~~ Bull trout, which is (~~((also known as))~~) a type of char, and Dolly

1099 Varden char;

1100           (~~(E.)~~) D. Kokanee; (~~and~~  
1101           ~~F.)~~) E. Pygmy whitefish; and  
1102           F. Mountain whitefish.

1103           NEW SECTION. SECTION 38. There is hereby added to K.C.C. chapter  
1104   21A.06 a new section to read as follows:

1105           Special flood hazard area or area of special flood hazard: the land subject to  
1106   inundation by the base flood. Special flood hazard areas ("SFHA") are designated on  
1107   flood insurance rate maps with the letters "A" or "V" including AE, AO, AH, A1-99, and  
1108   VE.

1109           NEW SECTION. SECTION 39. There is hereby added to K.C.C. chapter  
1110   21A.06 a new section to read as follows:

1111           Species of local importance: a species designated in the Comprehensive Plan to be  
1112   of local concern due to their population status, sensitivity to habitat alteration, or that is a  
1113   game species.

1114           SECTION 40. Ordinance 10870, Section 288, as amended, and K.C.C.  
1115   21A.06.1240 are hereby amended to read as follows:

1116           Stream: an aquatic area where surface water produces a channel, not including a  
1117   wholly artificial channel(~~(;)~~) unless (~~(#)~~) the artificial channel is:

1118           A. Used by (~~(salmonids)~~) fish; or

1119           B. Used to convey a stream or wetland that occurred naturally before  
1120   construction of the artificial channel.

1121           NEW SECTION. SECTION 41. There is hereby added to K.C.C. chapter  
1122   21A.06 a new section to read as follows:

1123           Tsunami hazard area: a geologically hazardous area susceptible to flooding,  
1124   inundation, debris impact, or mass wasting as the result of a tsunami in areas, including, but  
1125   not limited to, tsunami hazard areas shown on the Washington Geological Survey Digital  
1126   Data Series 22, version 2.1, October 2024, and V1-V30, VE, or V zones shown on the Flood  
1127   Insurance Rate Maps.

1128           SECTION 42. Ordinance 10870, Section 314, as amended, and K.C.C.  
1129   21A.06.1370 are hereby amended to read as follows:

1130           Volcanic hazard area: ~~((an))~~ a geologically hazardous area subject to pyroclastic  
1131   flows, lava flows, debris avalanche, or an inundation by debris flows, mudflows, lahars,  
1132   or related flooding resulting from volcanic activity on Mount Rainier, delineated based  
1133   on recurrence of an event equal in magnitude to the prehistoric Electron mudflow.

1134           SECTION 43. Ordinance 10870, Section 323, and K.C.C. 21A.06.1391 are  
1135   hereby amended to read as follows:

1136           Wetland:

1137           A. An area that is inundated or saturated by ground or surface water at a  
1138   frequency and duration sufficient to support, and under normal circumstances does  
1139   support, a prevalence of vegetation typically adapted for life in saturated soil conditions.

1140           B. Wetlands generally include swamps, marshes, bogs, and similar areas.  
1141   Wetlands may include those artificial wetlands intentionally created from nonwetland  
1142   areas created to mitigate conversion of wetlands.

1143           C. Wetlands do not include those artificially created wetlands intentionally  
1144   created from nonwetlands sites, including, but not limited to:

1145           1. Surface water conveyances for drainage or irrigation;

1146 2. Grass-lined swales;  
1147 3. Canals;  
1148 4. Detention facilities such as flow control facilities or wetponds;  
1149 5. Wastewater treatment facilities;  
1150 6. Farm ponds;  
1151 7. Landscape amenities; or  
1152 ((9-)) 8. Those wetlands created after July 1, 1990, that were unintentionally  
1153 created as a result of the construction of a road, street, or highway.

1154 SECTION 44. Ordinance 10870, Section 321, and K.C.C. 21A.06.1405 are  
1155 hereby amended to read as follows:

1156 Wetland functions: ~~((natural processes performed by wetlands including~~  
1157 ~~functions which are important in facilitating food chain production, providing habitat for~~  
1158 ~~nesting, rearing and resting sites for aquatic, terrestrial and avian species, maintaining the~~  
1159 ~~availability and quality of water, acting as recharge and discharge areas for groundwater~~  
1160 ~~aquifers and moderating surface and storm water flows, as well as performing other~~  
1161 ~~functions including, but not limited to, those set forth in 33 CFR 320.4(b)(2), 1988)) the~~  
1162 physical, biological, chemical, and geologic interactions among different components of  
1163 the environment that occur within a wetland. Wetland functions include, but are not  
1164 limited to, functions that improve water quality, functions that change the water regime in  
1165 a watershed such as flood storage, and functions that provide habitat for plants and  
1166 animals.

1167 NEW SECTION. SECTION 45. There is hereby added to K.C.C. chapter  
1168 21A.06 a new section to read as follows:

1169 Wetland values: estimates of the worth, merit, quality, or importance of wetland  
1170 processes, characteristics, or attributes that are considered to benefit society. Values vary  
1171 by watershed or by community. Examples of wetland values include education, research,  
1172 aesthetics, and recreation.

1173 NEW SECTION. SECTION 46. There is hereby added to K.C.C. chapter  
1174 21A.06 a new section to read as follows:

1175 Wildlife lighting: exterior lighting designed and installed to reduce impacts to  
1176 wildlife.

1177 SECTION 47. Ordinance 10870, Section 448, as amended, and K.C.C.  
1178 21A.24.010 are hereby amended to read as follows:

1179 The purpose of this chapter is to implement the goals and policies of the Growth  
1180 Management Act, chapter 36, 70A RCW, Washington state Environmental Policy Act,  
1181 chapter 43.21C RCW, and the King County Comprehensive Plan, which call for  
1182 protection of the natural environment and the public health and safety by:

1183 A. Establishing development and alteration standards to protect functions and  
1184 values of critical areas;

1185 B. Protecting members of the general public and public resources and facilities  
1186 from injury, loss of life, property damage, or financial loss due to flooding, erosion,  
1187 avalanche, landslides, tsunamis, alluvial fan hazards, seismic and volcanic events, soil  
1188 subsidence, or steep slope failures;

1189 C. Protecting unique, fragile, and valuable elements of the environment,  
1190 including, but not limited to, fish and wildlife and their habitats, and maintaining and  
1191 promoting countywide native biodiversity;

1192 D. Requiring avoidance and mitigation sequencing, including mitigation of  
1193 ~~((unavoidable))~~ impacts to critical areas~~((, by regulating alterations in or near critical~~  
1194 ~~areas))~~ and associated buffers;

1195 E. Preventing cumulative adverse environmental impacts on water availability,  
1196 water quality, ground~~((-))~~water, wetlands, and aquatic areas;

1197 F. Measuring the quantity and quality of wetland and aquatic area resources and  
1198 ~~((preventing overall))~~ ensuring no net loss of wetland, ((and)) aquatic area, and riparian  
1199 area functions and values;

1200 G. Protecting the public trust as to navigable waters, aquatic resources, and fish  
1201 and wildlife and their habitat;

1202 H. Meeting the requirements of the National Flood Insurance Program and  
1203 maintaining King County as an eligible community for federal flood insurance benefits;

1204 I. Alerting members of the public including, but not limited to, appraisers,  
1205 owners, potential buyers, or lessees to the development limitations of critical areas;

1206 J. Providing county officials with sufficient information ~~((to protect))~~ at the time  
1207 of permit application submittal to determine whether proposed land uses, activities, or  
1208 development could negatively impact critical areas; and

1209 K. Providing clear and objective development standards, application  
1210 requirements, and review processes for the administration of critical areas protection.

1211 SECTION 48. Ordinance 10870, Section 449, as amended, and K.C.C.  
1212 21A.24.020 are hereby amended to read as follows:

1213 A. This chapter applies to all land uses and alterations in King County, and all  
1214 persons within the county shall comply with this chapter.

1215 B. King County shall not approve any permit or otherwise issue any authorization  
1216 to alter the condition of any land, water, or vegetation or to construct or alter any  
1217 structure or improvement without first ensuring compliance with this chapter.

1218 C. Approval of a development proposal in accordance with this chapter does not  
1219 discharge the obligation of the applicant to comply with this chapter.

1220 D. When ~~((any other chapter))~~ another provision of the King County Code  
1221 conflicts with this chapter or when the provisions of this chapter are in conflict, the  
1222 provision that provides ~~((more))~~ greater environmental protection to ~~((environmentally))~~  
1223 critical areas shall apply unless specifically provided otherwise in this chapter or unless  
1224 the provision conflicts with federal or state laws or regulations.

1225 E. This chapter applies to all forest practices over which the county has  
1226 jurisdiction under chapter 76.09 RCW and Title 222 WAC.

1227 SECTION 49. Ordinance 15051, Section 137, as amended, and K.C.C.  
1228 21A.24.045 are hereby amended to read as follows:

1229 A. ~~((Within the following seven critical areas and their buffers a))~~ All alterations  
1230 ~~((are allowed if the alteration complies))~~ that comply with the development standards,  
1231 ~~((impact))~~ avoidance and mitigation ~~((requirements))~~ sequencing, and other applicable  
1232 requirements ~~((established))~~ in this chapter are allowed within the following critical areas  
1233 and their buffers:

- 1234 1. Critical aquifer recharge areas;  
1235 2. Coal mine hazard areas;  
1236 3. Erosion hazard areas;  
1237 4. Flood hazard areas except in the severe channel migration hazard areas;

1238 5. Landslide hazard areas under forty percent slope;

1239 6. Moderate channel migration hazard area;

1240 7. Seismic hazard areas; ~~((and~~

1241 ~~7.))~~ 8. Tsunami hazard areas; and

1242 9. Volcanic hazard areas.

1243 B. Within the following ~~((seven))~~ critical areas and their buffers, unless allowed

1244 as an alteration exception under K.C.C. 21A.24.070, only the alterations ~~((on))~~ in the

1245 table in subsection C. of this section are allowed if the alteration complies with

1246 conditions in subsection D. of this section, ~~((and))~~ the development standards, ~~((impact))~~

1247 avoidance and mitigation ~~((requirements))~~ sequencing, and other applicable requirements

1248 established in this chapter:

1249 1. ~~((Severe channel migration hazard area))~~ Alluvial fan hazard areas;

1250 2. ~~((Landslide hazard area over forty percent slope))~~ Aquatic areas;

1251 3. ~~((Steep slope hazard area))~~ Landslide hazard areas over forty percent slope;

1252 4. ~~((Wetland))~~ Riparian areas;

1253 5. ~~((Aquatic area))~~ Severe channel migration hazard areas;

1254 6. ~~((Wildlife habitat conservation area; and))~~ Steep slope hazard areas;

1255 7. ~~((Wildlife habitat network))~~ Wetlands;

1256 8. Wildlife habitat conservation areas; and

1257 9. Wildlife habitat networks.

1258 C. Alteration allowances ~~((I))~~ in the following table shall be interpreted as

1259 follows:

1260 1. If a cell is blank, the alteration is prohibited in the given critical area;

1261           2. An "A" in a cell indicates that an alteration is allowed if the listed conditions  
1262 and any applicable requirements in this chapter are met;

1263           3. A number in a cell indicates that the numbered condition in subsection D. of  
1264 this section applies;

1265           4. Where a series of numbers separated by commas are in a cell, each of the  
1266 applicable numbered conditions for that alteration applies;

1267           5. Where more than one letter-number combination appears in a cell, the  
1268 conditions of at least one letter-number combination shall be met;

1269           6. In cases where an ((activity)) alteration is included in more than one  
1270 ((activity)) category, ((the numbered conditions applicable to)) the most specific  
1271 description of the ((activity)) alteration shall govern((s. Where more than one numbered  
1272 condition appears for a listed activity, each of the relevant conditions specified for that  
1273 activity within the given critical area applies.)); and

1274           7. For alterations involving more than one critical area, compliance with the  
1275 conditions applicable to each critical area is required.

|                                                                                                                                                                                                       |                                                                                                                               |                                                                 |                                                                                                                                                                                                                          |                           |                                                                                                                                                                   |                                                                                                |

1276 D. The following alteration conditions apply:

1277 1. Limited to farm residences in grazed or tilled wet meadows and subject to the  
1278 limitations of subsection D.3. of this section.

1279 2. ~~((Only allowed in a buffer of a lake that is twenty acres or larger on a lot that~~  
1280 ~~was created before January 1, 2005, if:~~

1281 ~~a. at least seventy five percent of the lots abutting the shoreline of the lake or~~  
1282 ~~seventy five percent of the lake frontage, whichever constitutes the most developable~~  
1283 ~~lake frontage, has existing density of four dwelling units per acre or more;~~

1284 ~~b. the development proposal, including mitigation required by this chapter, will~~  
1285 ~~have the least adverse impact on the critical area;~~

1286 ~~c. existing native vegetation within the critical area buffer will remain~~  
1287 ~~undisturbed except as necessary to accommodate the development proposal and required~~  
1288 ~~building setbacks;~~

1289 ~~d. access is located to have the least adverse impact on the critical area and~~  
1290 ~~critical area buffer;~~

1291 e. ~~the site alteration is the minimum necessary to accommodate the~~  
1292 ~~development proposal and in no case in excess of five thousand square feet;~~  
1293 f. ~~the alteration is no closer than:~~  
1294 ~~(1) on a site with a shoreline environment designation of high intensity or~~  
1295 ~~residential, the greater of twenty five feet or the average of the setbacks on adjacent lots~~  
1296 ~~on either side of the subject property, as measured from the ordinary high water mark of~~  
1297 ~~the lake shoreline;~~  
1298 ~~(2) on a site with a shoreline environment designation of rural, conservancy,~~  
1299 ~~resource or forestry, the greater of fifty feet or the average of the setbacks on adjacent~~  
1300 ~~lots on either side of the subject property, as measured from the ordinary high water~~  
1301 ~~mark; and~~  
1302 ~~(3) on a site with a shoreline environment designation of natural, the greater~~  
1303 ~~of one hundred feet or the average of the setbacks on adjacent lots on either side of the~~  
1304 ~~subject property, as measured from the ordinary high water mark; and~~  
1305 g. ~~to the maximum extent practical, alterations are mitigated on the~~  
1306 ~~development proposal site by enhancing or restoring remaining critical area buffers.))~~  
1307 Only structures wholly or partially supported by a tree and used as accessory living  
1308 quarters or for play and similar uses described in K.C.C. 16.02.240.1, subject to the  
1309 following:  
1310 a. not allowed in wildlife habitat conservation areas, wetlands, or aquatic  
1311 areas;  
1312 b. the structure's floor area shall not exceed two hundred square feet, excluding  
1313 a narrow access stairway or landing leading to the structure;

1314           c. the structure shall be located as far from wetlands or aquatic areas as  
1315 practical, but in no case closer than seventy-five feet from a wetland or an aquatic area;

1316           d. only one tree-supported structure within a critical area buffer or riparian area  
1317 is allowed on a lot;

1318           e. all construction materials for the structure, including the platform, pilings,  
1319 exterior and interior walls, and roof, shall be constructed of nontoxic material, such as  
1320 nontreated wood, vinyl-coated wood, nongalvanized steel, plastic, plastic wood,  
1321 fiberglass, or cured concrete that the department determines will not have an impact on  
1322 water quality;

1323           f. to the maximum extent practical, the exterior of the structure shall be  
1324 camouflaged with natural wood and earth tone colors to limit visual impacts to wildlife  
1325 and visibility from the critical area. The camouflage shall be maintained to retain  
1326 concealment effectiveness;

1327           g. the structure shall not adversely impact the long-term health and viability of  
1328 the tree. The evaluation shall include, but not be limited to, the following:

1329               (1) the quantity of supporting anchors and connection points to attach the tree  
1330 house to the tree shall be the minimum necessary to adequately support the structure;

1331               (2) the attachments shall be constructed using the best available tree anchor  
1332 bolt technology; and

1333               (3) an International Society of Arboriculture Certified Arborist shall evaluate  
1334 the tree proposed for placement of the tree house and shall submit a report discussing  
1335 how the tree's long-term health and viability will not be negatively impacted by the tree  
1336 house or associated infrastructure;

1337           h. exterior lighting shall meet the following criteria:  
1338           (1) limited to the minimum quantity of lights necessary to meet the building  
1339 code requirements to allow for safe exiting of the structure and stairway; and  
1340           (2) exterior lights shall be fully shielded and shall direct light downward, in  
1341 an attempt to minimize impacts to the nighttime environment;  
1342           i. unless otherwise approved by the department, all external construction shall  
1343 be limited to September 1 through March 1 in order to avoid disturbance to wildlife  
1344 species during typical breeding, nesting, and rearing seasons;  
1345           j. trail access to the structure shall be designed in accordance with trail  
1346 standards under subsection D.47. of this section;  
1347           k. to the maximum extent practical, existing native vegetation shall be left  
1348 undisturbed. Only minimal hand clearing of vegetation is allowed; and  
1349           l. vegetated areas within the critical area buffer or riparian area that are  
1350 temporarily impacted by construction of the structure shall be restored by planting native  
1351 vegetation or climate-adaptive plants according to an approved mitigation plan.  
1352           ~~3. ((Limited to nonresidential farm structures in grazed or tilled wet meadows,~~  
1353 ~~or buffers of wetlands or aquatic areas where:~~  
1354           ~~a. the site is predominantly used for the practice of agriculture;~~  
1355           ~~b. the structure is in compliance with an approved farm management plan in~~  
1356 ~~accordance with K.C.C. 21A.24.051;~~  
1357           ~~c. the structure is either:~~

1358                   ~~(1) on or adjacent to existing nonresidential impervious surface areas;~~  
1359   additional impervious surface area is not created waterward of any existing impervious  
1360   surface areas and the area was not used for crop production;

1361                   ~~(2) higher in elevation and no closer to the critical area than its existing~~  
1362   position; or

1363                   ~~(3) at a location away from existing impervious surface areas that is~~  
1364   determined to be the optimum site in the farm management plan;

1365                   ~~d. all best management practices associated with the structure specified in the~~  
1366   farm management plan are installed and maintained;

1367                   ~~e. installation of fencing in accordance with K.C.C. chapter 21A.30 does not~~  
1368   require the development of a farm management plan if required best management  
1369   practices are followed and the installation does not require clearing of critical areas or  
1370   their buffers; and

1371                   ~~f. in a severe channel migration hazard area portion of an aquatic buffer only~~  
1372   if:

1373                   ~~(1) there is no feasible alternative location on site;~~  
1374                   ~~(2) the structure is located where it is least subject to risk from channel~~  
1375   migration;

1376                   ~~(3) the structure is not used to house animals or store hazardous substances;~~  
1377   and

1378                   ~~(4) the total footprint of all accessory structures within the severe channel~~  
1379   migration hazard area will not exceed the greater of one thousand square feet or two  
1380   percent of the severe channel migration hazard area on the site)) Repealed.

1381 4. No clearing, grading, external construction, or other disturbance in a wildlife  
1382 habitat conservation area is allowed during breeding seasons established under K.C.C.  
1383 21A.24.382.

1384 5. Allowed for existing legally established structures when:  
1385 a. the ~~((landslide))~~ hazard poses little ~~((or))~~ to no risk of injury; and  
1386 b. the risk of landsliding or slope instability is low~~((; and~~  
1387 ~~e. there is not an expansion of the structure))~~.

1388 6. Within an alluvial fan hazard area or severe channel migration hazard area  
1389 allowed for:  
1390 a. existing legally established primary structures if:  
1391 (1) there is not an increase of the footprint of any existing structure; and  
1392 (2) there is not a substantial improvement as defined in K.C.C. 21A.06.1270;  
1393 and  
1394 b. existing legally established accessory structures if:  
1395 (1) additions to the footprint will not make the total footprint of all existing  
1396 structures more than one~~((-))~~ thousand square feet; and  
1397 (2) there is no~~((t an))~~ expansion of the footprint towards any source of  
1398 alluvial fan hazard or channel migration hazard, unless the applicant demonstrates that  
1399 the location is less subject to risk and has less impact on the critical area.

1400 7. Allowed only ~~((in grazed wet meadows or the buffer or building setback~~  
1401 ~~outside a severe channel migration hazard area))~~ if:  
1402 a. the structure was not established as the result of an alteration exception,  
1403 variance, buffer averaging, or reasonable use exception;

1404            b. the location of the expansion has the least impact on the critical area;

1405            c. the expansion is on an existing legally established impervious surface, lawn

1406 or landscaping area, farm field, or grazed area;

1407            d. for a nonresidential structure, the expansion ~~((or replacement))~~ does not

1408 increase the footprint of a nonresidential structure;

1409            ~~((b.(1)))~~ e. for a legally established dwelling unit or accessory structure, the

1410 expansion ~~((or replacement, including any expansion of a legally established accessory~~

1411 ~~structure allowed under this subsection B.7.b.,))~~ does not increase the footprint of the

1412 dwelling unit and all other structures by more than one thousand square feet,

1413 cumulatively since January 1, 2005. The footprint limitation does not ~~((including))~~

1414 include any expansion of a drainfield made necessary by the expansion of the dwelling

1415 unit. To the maximum extent practical, the ~~((replacement or))~~ expansion of a drainfield

1416 in the buffer should be located within areas of existing lawn or landscaping, unless

1417 another location will have a lesser impact on the critical area and ~~((its))~~ associated buffer;

1418            ~~((2) for a structure accessory to a dwelling unit, the expansion or~~

1419 ~~replacement is located on or adjacent to existing impervious surface areas and does not~~

1420 ~~result in a cumulative increase in the footprint of the accessory structure and the dwelling~~

1421 ~~unit by more than one thousand square feet;~~

1422            ~~(3) the location of the expansion has the least adverse impact on the critical~~

1423 ~~area; and~~

1424            ~~(4) a comparable area of degraded buffer area shall be enhanced through~~

1425 ~~removal of nonnative plants and replacement with native vegetation in accordance with~~

1426 ~~an approved landscaping plan;~~

1427 e. ~~the structure was not established as the result of an alteration exception,~~  
1428 ~~variance, buffer averaging or reasonable use exception;~~

1429 d. ~~to the maximum extent practical, the expansion or replacement is not~~  
1430 ~~located closer to the critical area or within the relic of a channel that can be connected to~~  
1431 ~~an aquatic area; and~~

1432 e. ~~The expansion of a residential structure in the buffer of a Type S aquatic~~  
1433 ~~area that extends towards the ordinary high water mark requires a shoreline variance if:~~

1434 ~~(1) the expansion is within thirty five feet of the ordinary high water mark; or~~  
1435 ~~(2) the expansion is between thirty five and fifty feet of the ordinary high~~  
1436 ~~water mark and the area of the expansion extending towards the ordinary high water mark~~  
1437 ~~is greater than three hundred square feet)).~~

1438 8. Allowed ~~((upon another portion of an existing impervious surface outside a~~  
1439 ~~severe channel migration hazard area))~~ only if:

1440 a. ~~((except as otherwise allowed under subsection D.7. of this section, the~~  
1441 ~~structure is not located closer to the critical area))~~ the location of the replacement is  
1442 within the footprint of the existing structure or has the least impact on the critical area;

1443 b. ~~((except as otherwise allowed under subsection D.7. of this section, the~~  
1444 ~~existing))~~ the total footprint of all structures and impervious surfaces within the critical  
1445 area or associated buffer is not expanded; ~~((and))~~

1446 c. the replacement is on an existing legally established impervious surface,  
1447 lawn or landscaping area, farm field, or grazed area; and

1448 d. the ~~((degraded buffer area is enhanced through removal of nonnative plants~~  
1449 ~~and replacement))~~ footprint of an existing structure at an alternative location is

1450 revegetated with native vegetation or climate-adaptive plants in accordance with an  
1451 approved ~~((landscaping))~~ mitigation plan.

1452 9. ~~((Limited to piers or seasonal floating docks))~~ Allowed in a category II, III, or  
1453 IV wetland or ~~((its))~~ associated buffer ~~((or along a lake shoreline or its buffer where))~~ to  
1454 access an aquatic area if:

1455 a. the vegetation where the alteration is proposed does not consist of dominant  
1456 native wetland herbaceous or woody vegetation six feet in width or greater and the lack  
1457 of this vegetation is not the result of any violation of law;

1458 b. the wetland or ~~((lake shoreline))~~ aquatic area is not a salmonid spawning  
1459 area; and

1460 c. hazardous substances or toxic materials are not used~~((; and~~

1461 ~~d. if located in a freshwater lake, the pier or dock conforms to the standards for~~  
1462 ~~docks under K.C.C. 21A.25.180)).~~

1463 10. Allowed ~~((on type N or O aquatic areas))~~ if:

1464 a. hazardous substances or toxic materials are not used;

1465 b. the aquatic area is not a salmonid spawning area; and

1466 c. on type S or F aquatic areas, complies if in compliance with K.C.C.

1467 21A.25.180.

1468 11. ~~((Allowed on type S or F aquatic areas outside of the severe channel~~  
1469 ~~migration hazard area if in compliance with K.C.C. 21A.25.180))~~ Repealed.

1470 12. ~~((When located on a lake, must be in compliance with K.C.C. 21A.25.180))~~

1471 Repealed.

1472 13. Limited to steep slope hazard areas and associated buffers only, for the  
1473 purposes of regrading and stabilizing of a slope formed as a result of a legal grading  
1474 activity.

1475 14. ~~((The following are allowed in the severe channel migration hazard area if~~  
1476 ~~conducted more than one hundred sixty five feet from the ordinary high water mark in~~  
1477 ~~the rural area and natural resource lands and one hundred fifteen feet from the ordinary~~  
1478 ~~high water mark in the urban area:~~

1479 a. ~~grading of up to fifty cubic yards on lot less than five acres; and~~  
1480 b. ~~clearing of up to one thousand square feet or up to a cumulative thirty five~~  
1481 ~~percent of the severe channel migration hazard area.))~~ Allowed for emergency work in  
1482 alluvial fan hazard area and overlapping critical areas if:

1483 a. in response to an emergency event where channel avulsion or migration is  
1484 imminent or has occurred as a result of a pulse of in-channel sediment or debris  
1485 deposition;

1486 b. to prevent an imminent threat to:

1487 (1) public roadways, utilities, and other infrastructure;  
1488 (2) sole access driveways and roads;  
1489 (3) dwelling units, accessory dwelling units, or accessory living quarters, and  
1490 residential accessory structures;

1491 (4) farm structures necessary to store equipment, produce, or livestock;  
1492 c. conducted under an approved emergency authorization request per K.C.C.  
1493 16.082.065;

1494            d. the emergency work is completed within thirty days of receiving a written  
1495 emergency authorization;

1496            e. the emergency work is the minimum necessary bank stabilization, sediment  
1497 removal, or repair of existing infrastructure to mitigate the imminent threat;

1498            f. proposed in-stream work is minimized or results in the least impact in the  
1499 short term to the ecological functions and values of the critical areas present, including  
1500 special consideration for fish or fish eggs in the project area;

1501            g. downstream sediment runoff and turbidity is minimized and does not exceed  
1502 the impact of the emergency event;

1503            h. the applicant provides sufficient notice of work to the department for a  
1504 department representative to be present at the site during work activities, if the  
1505 department determines that observation is necessary;

1506            i. as part of the permitting process following the emergency authorization, the  
1507 applicant proposes compensatory mitigation and additional alterations as necessary to:

1508            (1) mitigate any adverse ecological impacts of the emergency actions;  
1509            (2) minimize the risk of alluvial fan hazards that could result in the necessity  
1510 of future emergency actions to the maximum extent practical; and

1511            (3) minimize to the maximum extent practical the frequency and magnitude  
1512 of future adverse ecological impacts that may result from future hazard mitigation  
1513 activities; and

1514            j. nonemergency work required under the subsequent permit occurs during  
1515 approved periods for in-stream work and conforms to all other standards in this chapter.

1516 15. Only where erosion or landsliding threatens a primary structure, utility  
1517 facility, roadway, driveway, or public trails, ~~((aquatic area or wetland if,))~~ and to the  
1518 maximum extent practical, stabilization work does not disturb the slope and its vegetative  
1519 cover and any associated critical areas.

1520 16. Allowed ~~((when))~~ for projects performed by~~((;))~~ or at the direction of ~~((or~~  
1521 ~~authorized by))~~ a government agency in accordance with regional road construction and  
1522 maintenance guidelines.

1523 17. Allowed ~~((when))~~ for projects not performed under the direction of a  
1524 government agency only if:

1525 a. the maintenance or expansion does not involve the use of herbicides,  
1526 hazardous substances, sealants, or other liquid oily substances in aquatic areas, riparian  
1527 areas, wetlands, or ~~((their))~~ associated buffers; and

1528 b. when maintenance, expansion, or replacement of bridges or culverts  
1529 involves water used by salmonids:

1530 (1) the work ~~((is in compliance))~~ complies with ditch standards in public rule;  
1531 and

1532 (2) the maintenance of culverts is limited to removal of sediment and debris  
1533 from the culvert and its inlet, invert and outlet and the stabilization of the disturbed or  
1534 damaged bank or channel immediately adjacent to the culvert and shall not involve the  
1535 excavation of a new sediment trap adjacent to the inlet.

1536 18. Allowed for the removal of hazard trees and vegetation as necessary for  
1537 surveying or testing purposes.

1538                   19. The limited trimming, pruning, or removal of vegetation under a vegetation  
1539 management plan approved by the department:

1540                   a. in steep slope and landslide hazard areas, for the making and maintenance of  
1541 view corridors; and

1542                   b. in all critical areas, for habitat enhancement, invasive species control, or  
1543 forest management activities.

1544                   20. Harvesting of plants and plant materials, such as plugs, stakes, seeds, or  
1545 fruits, for restoration and enhancement projects is allowed.

1546                   21. ~~((Cutting of firewood is subject to the following:~~  
1547                   ~~a. within))~~ Allowed only for personal use in a buffer or wildlife habitat  
1548 ~~((conservation area, cutting firewood is not allowed;))~~ network if:

1549                   b. done in accordance with an approved forest management plan;  
1550                   c. no tree containing an active nest is cut; and  
1551                   d. within a wildlife habitat network, cutting shall be in accordance with a  
1552 management plan approved under K.C.C. 21A.24.386(~~;~~ ~~and~~

1553                   ~~e. within a critical area buffer, cutting shall be for personal use and in~~  
1554 ~~accordance with an approved forest management plan or rural stewardship plan)).~~

1555                   22. ~~((Allowed only in buffers if in accordance with best management practices~~  
1556 ~~approved by the King County fire marshal))~~ Not allowed in wetlands, aquatic areas,  
1557 wildlife habitat conservation areas. Otherwise, allowed in critical areas and associated  
1558 buffers within the wildland urban interface if limited to the activities listed in K.C.C.  
1559 16.82.051.E.23.

1560                   23. ~~((Allowed as follows:~~

1561           a. ~~if conducted in accordance with an approved forest management plan, farm~~  
 1562 ~~management plan, or rural stewardship plan; or~~  
 1563           b. ~~without an approved forest management plan, farm management plan, or~~  
 1564 ~~rural stewardship plan, only if:~~  
 1565           (1) ~~removal is undertaken with hand labor, including hand-held mechanical~~  
 1566 ~~tools, unless the King County noxious weed control board otherwise prescribes the use of~~  
 1567 ~~riding mowers, light mechanical cultivating equipment, or herbicides or biological~~  
 1568 ~~control methods;~~  
 1569           (2) ~~the area is stabilized to avoid regrowth or regeneration of noxious weeds;~~  
 1570           (3) ~~the cleared area is revegetated with native vegetation and stabilized~~  
 1571 ~~against erosion; and~~  
 1572           (4) ~~herbicide use is in accordance with federal and state law;)) Repealed.~~  
 1573           24. Allowed to repair or replace existing on-site wastewater disposal systems in  
 1574 accordance with the applicable public health standards within Marine Recovery Areas  
 1575 adopted by ~~((the P))~~public ~~((H))~~health - Seattle & King County and:  
 1576           a. there is no alternative location available with less impact on the critical area;  
 1577           b. ~~((impacts to the critical area are minimized to the maximum extent~~  
 1578 ~~practicable;~~  
 1579           e.)) the alterations will not subject the critical area to increased risk of  
 1580 landslide or erosion;  
 1581           ~~((d.))~~ c. vegetation removal is the minimum necessary to accommodate the  
 1582 septic system; and

1583            ~~((e-))~~ d. significant risk of personal injury is eliminated or minimized in the  
1584 landslide hazard area.

1585            25. Only if in compliance with published Washington state Department of Fish  
1586 and Wildlife and Washington state Department of Natural Resources ~~((M))~~ management  
1587 standards for the species. If there are no published Washington state standards, only if in  
1588 compliance with management standards determined by the county to be consistent with  
1589 best available science.

1590            26. Allowed only if:

1591            a. there is ~~((not another))~~ no other feasible location with less ~~((adverse))~~ impact  
1592 on the critical area and ~~((its))~~ associated buffer;

1593            b. the ~~((corridor))~~ road is not located over habitat used for salmonid rearing or  
1594 spawning or by a species listed as endangered or threatened by the state or federal  
1595 government unless the department determines that there is no other feasible crossing  
1596 site~~((-))~~;

1597            c. the ~~((corridor))~~ width is minimized to the maximum extent practical;

1598            d. the construction occurs during approved periods for instream work;

1599            e. the ~~((corridor))~~ alteration will not change or diminish the overall aquatic  
1600 area flow peaks, duration, or volume or the flood storage capacity; and

1601            f. no new ~~((public right-of-way is))~~ roads are established within a severe  
1602 channel migration hazard area.

1603            27. To the maximum extent practical, during breeding season established under  
1604 K.C.C. 21A.24.382, land clearing machinery such as bulldozers, graders, or other heavy  
1605 equipment are not operated within a wildlife habitat conservation area.

1606 28. Allowed only if:

1607 a. an alternative access is not available;

1608 b. impact to the critical area is minimized to the maximum extent practical

1609 including the use of walls to limit the amount of cut and fill necessary;

1610 c. the risk associated with landslide and erosion is minimized;

1611 d. access is located where it is least subject to risk from channel migration; and

1612 e. construction occurs during approved periods for instream work.

1613 29. ~~((Only if in compliance with a farm management plan in accordance with~~

1614 ~~K.C.C. 21A.24.051.))~~ Allowed for residential utility service distribution lines to

1615 residential dwellings, including, but not limited to, well water conveyance, septic system

1616 conveyance, water service, sewer service, natural gas, electrical, cable, and telephone, if:

1617 a. there is no alternative location with less impact on the critical area or the

1618 critical area buffer;

1619 b. the residential utility service distribution lines meet ~~((all of))~~ the following,

1620 to the maximum extent practical:

1621 (1) are not located over habitat used for salmonid rearing or spawning or by a

1622 species listed as endangered or threatened by the state or federal government unless the

1623 department determines that there is no other feasible crossing site;

1624 (2) not located over a type S aquatic area;

1625 (3) paralleling the channel or following a down-valley route near the channel

1626 is avoided;

1627 (4) the width of clearing is minimized;

1628                    (5) the removal of trees greater than twelve inches diameter at breast height is  
1629   minimized;

1630                    (6) an additional, contiguous, and undisturbed critical area buffer, equal in  
1631   area to the disturbed critical area buffer area is provided to protect the critical area;

1632                    (7) access for maintenance is at limited access points into the critical area  
1633   buffer.

1634                    (8) the construction occurs during approved periods for instream work;

1635                    (9) bored, drilled, or other trenchless crossings are encouraged, and shall be  
1636   laterally constructed at least four feet below the maximum depth of scour for the base  
1637   flood; and

1638                    (10) open trenching across Type O or Type N aquatic areas is only used  
1639   during low flow periods or only within aquatic areas when they are dry.

1640                    30. Allowed only if:

1641                    a. the new construction or replacement is made fish passable in accordance  
1642   with the most recent Washington state Department of Fish and Wildlife manuals or with  
1643   the National Marine and Fisheries Services guidelines for federally listed salmonid  
1644   species; and

1645                    b. the site is ~~((restored))~~ revegetated with ~~((appropriate))~~ native vegetation or  
1646   climate-adaptive plants in accordance with an approved mitigation plan.

1647                    31. Allowed if necessary to bring the bridge or culvert up to current standards  
1648   and if:

1649                    a. there is no~~((t an))~~ other feasible alternative available with less impact on the  
1650   aquatic area and ~~((its buffer))~~ adjacent riparian area; and

1651                   b. to the maximum extent practical, the bridge or culvert is located to minimize  
1652 impacts to the aquatic area and ~~((its buffers))~~ adjacent riparian area.

1653                   32. Allowed in an existing roadway if conducted consistent with the regional  
1654 road maintenance guidelines.

1655                   33. ~~((Allowed))~~ When outside the roadway, allowed if:

1656                   a. the alterations will not subject the critical area to an increased risk ~~((of))~~  
1657 from landslide, alluvial fan, or erosion hazards;

1658                   b. vegetation removal is the minimum necessary to locate the utility or  
1659 construct the corridor; and

1660                   c. significant risk of personal injury is eliminated or minimized in the landslide  
1661 or alluvial fan hazard area.

1662                   34. Limited to the pipelines, cables, wires, and support structures of utility  
1663 facilities within utility corridors if:

1664                   a. there is no alternative location with less ~~((adverse))~~ impact on the critical  
1665 area and critical area buffer;

1666                   b. new utility corridors meet ~~((all of))~~ the following to the maximum extent  
1667 practical:

1668                   (1) are not located over habitat used for salmonid rearing or spawning or by a  
1669 species listed as endangered or threatened by the state or federal government unless the  
1670 department determines that there is no other feasible crossing site;

1671                   (2) the mean annual flow rate is less than twenty cubic feet per second; and

1672                   (3) paralleling the channel or following a down-valley route near the channel  
1673 is avoided;

1674 c. to the maximum extent practical utility corridors are located so that:

1675 (1) the width is the minimized;

1676 (2) the removal of trees greater than twelve inches diameter at breast height is

1677 minimized;

1678 (3) an additional, contiguous, and undisturbed critical area buffer, equal in

1679 area to the disturbed critical area buffer area including any allowed maintenance roads, is

1680 provided to protect the critical area;

1681 d. to the maximum extent practical, access for maintenance is at limited access

1682 points into the critical area buffer rather than by a parallel maintenance road. If a parallel

1683 maintenance road is necessary, the following standards are met:

1684 (1) to the maximum extent practical, the width of the maintenance road is

1685 minimized and in no event greater than fifteen feet; and

1686 (2) the location of the maintenance road is contiguous to the utility corridor

1687 on the side of the utility corridor farthest from the critical area;

1688 e. the utility corridor or facility will not adversely impact the overall critical

1689 area hydrology or diminish flood storage capacity;

1690 f. the construction occurs during approved periods for instream work;

1691 g. the utility corridor serves multiple purposes and properties to the maximum

1692 extent practical;

1693 h. bridges or other construction techniques that do not disturb the critical areas

1694 are used to the maximum extent practical;

1695 i. bored, drilled, or other trenchless crossings ~~((is))~~ are laterally constructed at

1696 least four feet below the maximum depth of scour for the base flood;

1697 j. bridge piers or abutments for bridge crossing are not placed within the  
 1698 FEMA floodway or the ordinary high water mark;

1699 k. open trenching is only used during low flow periods or only within aquatic  
 1700 areas when they are dry. The department may approve open trenching of type S or F  
 1701 aquatic areas only if there is not a feasible alternative and ~~((equivalent or greater))~~ equal  
 1702 or better environmental protection can be achieved; and

1703 l. minor communication facilities may collocate on existing utility facilities if:  
 1704 (1) no new transmission support structure is required; and  
 1705 (2) equipment cabinets are located on the transmission support structure.

1706 35. Allowed only for new utility facilities in existing utility corridors.

1707 36. Allowed for onsite private individual utility service connections or private  
 1708 or public utilities if the disturbed area is not expanded and no hazardous substances,  
 1709 pesticides or fertilizers are applied.

1710 37. Allowed if the disturbed area is not expanded, clearing is limited to the  
 1711 maximum extent practical, and no hazardous substances, pesticides, or fertilizers are  
 1712 applied.

1713 38. Allowed if:  
 1714 a. conveying the surface water into the wetland buffer or ~~((aquatic area buffer))~~  
 1715 riparian area, and discharging into the wetland buffer, ~~((or aquatic area buffer))~~ riparian  
 1716 area, or at the wetland or aquatic area edge, has less ~~((adverse))~~ impact upon the wetland  
 1717 ~~((or)),~~ wetland buffer, aquatic area ~~((or wetland or aquatic area buffer))~~, or riparian area  
 1718 than if the surface water were discharged at the buffer~~((s))~~ or riparian area edge and  
 1719 allowed to naturally drain through the buffer or riparian area;

1720                b. the volume of discharge is minimized through application of low impact  
1721 development and water quality measures identified in the ((King County)) Surface Water  
1722 Design Manual;

1723                c. the conveyance and outfall are installed with hand equipment where  
1724 feasible;

1725                d. the outfall shall include bioengineering techniques where feasible; and  
1726                e. the outfall is designed to minimize ((adverse)) impacts to critical areas.

1727                39. Allowed only if:

1728                a. there is no feasible alternative with less impact on the critical area and ((its))  
1729 associated buffer;

1730                b. to the maximum extent practical, the bridge or culvert is located to minimize  
1731 impacts to the critical area and ((its)) associated buffer;

1732                c. the bridge or culvert is not located over habitat used for salmonid rearing or  
1733 spawning unless there is no other feasible crossing site;

1734                d. construction occurs during approved periods for in-stream work; and  
1735                e. bridge piers or abutments for bridge crossings are not placed within the  
1736 FEMA floodway, severe channel migration hazard area<sub>2</sub> or waterward of the ordinary  
1737 high water mark.

1738                40. Allowed for an open, vegetated stormwater management conveyance system  
1739 and outfall structure that simulates natural conditions if:

1740                a. fish habitat features necessary for feeding, cover<sub>1</sub> and reproduction are  
1741 included when appropriate;

1742                   b. vegetation is maintained and added adjacent to all open channels and ponds,  
1743 if necessary to prevent erosion, filter out sediments, or shade the water; and  
1744                   c. bioengineering techniques are used to the maximum extent practical.

1745                   41. Allowed for a closed, tightlined conveyance system and outfall structure if:  
1746                   a. necessary to avoid erosion of slopes; and  
1747                   b. bioengineering techniques are used to the maximum extent practical.

1748                   42. Allowed in a severe channel migration hazard area, riparian area, or an  
1749 ~~((aquatic area buffer))~~ alluvial fan hazard area to prevent bank erosion only:  
1750                   a. if consistent with the Integrated Streambank Protection Guidelines  
1751 (Washington State Aquatic Habitat Guidelines Program, 2002) and if bioengineering  
1752 techniques are used to the maximum extent practical, unless the applicant demonstrates  
1753 that other methods provide equivalent structural stabilization and environmental function;  
1754                   b. based on a critical area((s)) report, the department determines that the new  
1755 flood protection facility will not cause ~~((significant))~~ impacts to upstream or downstream  
1756 properties; and  
1757                   c. to prevent bank erosion for the protection of:  
1758                   (1) public roadways;  
1759                   (2) sole access routes in existence before February 16, 1995;  
1760                   (3) new primary dwelling units, accessory dwelling units, or accessory living  
1761 quarters and residential accessory structures located outside the severe channel migration  
1762 hazard area if:  
1763                   (a) the site is adjacent to or abutted by properties on both sides containing  
1764 buildings or sole access routes protected by legal bank stabilization in existence before

1765 February 16, 1995. The buildings, sole access routes, or bank stabilization ~~((must))~~ shall  
1766 be located no more than six hundred feet apart as measured parallel to the migrating  
1767 channel; and

1768 (b) the new primary dwelling units, accessory dwelling units, accessory  
1769 living quarters or residential accessory structures are located no closer to the aquatic area  
1770 than existing primary dwelling units, accessory dwelling units, accessory living quarters,  
1771 or residential accessory structures on abutting or adjacent properties; or

1772 (4) existing primary dwelling units, accessory dwelling units, accessory living  
1773 quarters, or residential accessory structures if:

1774 (a) the structure was in existence before the adoption date of a King County  
1775 Channel Migration Zone hazard map that applies to that channel, if such a map exists;

1776 (b) the structure is in imminent danger, as determined by a ~~((geologist,~~  
1777 ~~engineering geologist or geotechnical engineer))~~ geological professional;

1778 (c) the applicant has demonstrated that the existing structure is at risk, and  
1779 the structure and supporting infrastructure cannot be relocated on the lot further from the  
1780 source of channel migration; and

1781 (d) nonstructural measures are not feasible.

1782 43. Applies to ~~((lawfully))~~ legally established existing structures if:

1783 a. the height of the facility is not increased, unless the facility is being replaced  
1784 in a new alignment that is landward of the previous alignment and enhances aquatic area  
1785 habitat and process;

1786                   b. the linear length of the facility is not increased, unless the facility is being  
1787 replaced in a new alignment that is landward of the previous alignment and enhances  
1788 aquatic area habitat and process;

1789                   c. the footprint of the facility is not expanded waterward;

1790                   d. consistent with the Integrated Streambank Protection Guidelines  
1791 (Washington State Aquatic Habitat Guidelines Program, 2002) and bioengineering  
1792 techniques are used to the maximum extent practical;

1793                   e. the site is restored with appropriate native vegetation or climate-adaptive  
1794 plants and erosion protection materials in accordance with an approved mitigation plan;  
1795 and

1796                   f. based on a critical area((s)) report, the department determines that the  
1797 maintenance, repair, replacement, or construction will not cause ((significant)) impacts to  
1798 upstream or downstream properties.

1799                   44. Allowed in type N and O aquatic areas if done in the least impacting way at  
1800 the least impacting time of year, in conformance with applicable best management  
1801 practices, and all affected instream and ((buffer)) riparian area features are restored.

1802                   45. Allowed in ((a)) type S or F ((water)) aquatic areas when such work is:

1803                   a. included as part of a project to evaluate, restore, mitigate, or ((improve))  
1804 enhance habitat((-and));

1805                   b. sponsored or cosponsored by an Indian tribe, ((public)) government agency,  
1806 nonprofit organization that has natural resource management as a function, or ((by a  
1807 federally recognized tribe)) a higher education institution; and

1808                   c. in compliance with the criteria of subsection D.49. of this section.

1809 46. Allowed ~~((as long as))~~ if the trail surface is ~~((not))~~ constructed of  
1810 ~~((im))~~pervious surfaces that ~~((will))~~ does not contribute to surface water run~~((-))~~off,  
1811 ~~((unless))~~ except when the construction is necessary for soil stabilization, ~~((or))~~ soil  
1812 erosion prevention, or ~~((unless the trail system is specifically designed and))~~ intended to  
1813 be accessible to ~~((handicapped))~~ persons with disabilities.

1814 47. ~~((Not allowed in a wildlife habitat conservation area. Otherwise,~~  
1815 a))Allowed only in ((the buffer)) a riparian area or wetland buffer, or for crossing a  
1816 category II, III, or IV wetland or a type F, N, or O aquatic area, or a wildlife habitat  
1817 network, if:

1818 a. the trail surface is ~~((made))~~ constructed of pervious materials, except ~~((that~~  
1819 ~~public multipurpose trails))~~ when a public trail is intended to be accessible to persons  
1820 with disabilities may be made of impervious materials if they meet all the requirements in  
1821 K.C.C. chapter 9.12. A trail section that crosses a wetland or aquatic area shall be  
1822 constructed as a raised boardwalk or bridge;

1823 b. to the maximum extent practical, buffers, riparian areas, and wildlife habitat  
1824 network areas are expanded equal to the width of the trail corridor including disturbed  
1825 areas;

1826 c. there is not another feasible location with less ~~((adverse))~~ impact on the  
1827 critical area and ~~((its))~~ associated buffer;

1828 d. the trail is not located over habitat used for salmonid rearing or spawning or  
1829 by a species listed as endangered or threatened by the state or federal government unless  
1830 the department determines that there is no other feasible crossing site;

1831 e. the trail width is minimized to the maximum extent practical and private  
1832 foot trails are limited to three feet in width;  
1833 f. the construction occurs during approved periods for instream work; ~~((and))~~  
1834 g. the trail corridor will not change or diminish the overall aquatic area flow  
1835 peaks, duration or volume or the flood storage capacity~~((:))~~;  
1836 h. the trail shall minimize impacts within a wetland buffer, riparian area, or  
1837 wildlife habitat network by avoiding a route that parallels the wetland or aquatic area to  
1838 the maximum extent practical;  
1839 i. trail maintenance or expansion does not involve the use of herbicides,  
1840 hazardous substances, sealants, or other liquid oily substances within aquatic areas,  
1841 riparian areas, wetlands, or associated buffers;  
1842 j. the trail may be ~~((located across a critical area buffer))~~ allowed to cross a  
1843 riparian area, wetland buffer, or wildlife habitat network for access to a viewing platform  
1844 or to a permitted dock or pier; and  
1845 ~~((i-A))~~ k. a private viewing platform may be allowed if it is:  
1846 (1) located upland from the wetland edge or the ordinary high water mark of  
1847 an aquatic area;  
1848 (2) located where it will not be detrimental to the functions of the wetland or  
1849 aquatic area and will have the least adverse environmental impact on the critical area or  
1850 ~~((its))~~ associated buffer;  
1851 (3) limited to fifty square feet in size;  
1852 (4) constructed of materials that are nontoxic; and  
1853 (5) on footings located outside of the wetland or aquatic area.

1854 48. Only if the maintenance:

1855 a. does not involve the use of herbicides or other hazardous substances except

1856 for the removal of noxious weeds or invasive vegetation;

1857 b. when salmonids are present, the maintenance is in compliance with ditch

1858 standards in public rule; and

1859 c. does not involve any expansion of the roadway, lawn, landscaping, ditch,

1860 culvert, engineered slope, or other improved area being maintained.

1861 49. Limited to alterations to create, restore, or enhance habitat forming

1862 processes or ~~((directly restore))~~ habitat functions and values, including ~~((access for))~~

1863 construction access necessary for the project, as follows:

1864 a. ~~((projects sponsored or cosponsored by a public agency that has natural~~

1865 ~~resource management as a primary function or by a federally recognized tribe;~~

1866 ~~b. restoration and enhancement plans prepared by a qualified biologist; or~~

1867 ~~c. conducted in accordance with an approved forest management plan, farm~~

1868 ~~management plan or rural stewardship plan))~~ projects shall provide a net ecological

1869 benefit and increase in functions over the existing ecological and functional conditions of

1870 the critical area; and

1871 b. an ecological critical area report shall include:

1872 (1) an evaluation of the anticipated net change in ecological functions from

1873 pre-project to post project; and

1874 (2) a monitoring and reporting plan to demonstrate the gain of ecological

1875 function.

1876 50. Allowed in accordance with a scientific sampling permit issued by  
1877 Washington state Department of Fish and Wildlife or an incidental take permit issued  
1878 under Section 10 of the Endangered Species Act.

1879 51.a. Allowed ~~((for the))~~ if done with minimal clearing and grading, including  
1880 site access, necessary to prepare critical area reports.

1881 ~~((52.))~~ b. The following are allowed in a wetland, wetland buffer, aquatic area,  
1882 riparian area, and severe channel migration hazard area if associated spoils are contained:

1883 ~~((a.))~~ (1) data collection and research if carried out to the maximum extent  
1884 practical by nonmechanical or hand~~((--))~~held equipment;

1885 ~~((b.))~~ (2) survey monument placement;

1886 ~~((c.))~~ (3) site exploration and gage installation if performed in accordance with  
1887 state-approved sampling protocols and accomplished to the maximum extent practical by  
1888 hand~~((--))~~held equipment ~~((and))~~; or

1889 (4) similar work associated with an incidental take permit issued under  
1890 Section 10 of the Endangered Species Act or consultation under Section 7 of the  
1891 Endangered Species Act.

1892 52. Repealed.

1893 53. ~~((Limited to))~~ a. Allowed for agricultural activities in the same footprint if:

1894 (1) in continuous existence ~~((since))~~ as of January 1, 2005~~((, with no~~  
1895 ~~expansion within the critical area or critical area buffer))~~; or

1896 (2) legally established after January 1, 2005, and in continuous existence since  
1897 establishment.

1898                b. "Continuous existence" includes cyclical operations and managed periods of  
1899    soil restoration, enhancement or other fallow states not exceeding seven years and  
1900    associated with these ~~((horticultural and))~~ agricultural activities. Transfer of ownership,  
1901    sale, or leasing of land shall not affect continuous existence.

1902                54. Only ((A)) allowed ((for)) as follows:

1903                a. Limited to the following activities:

1904                (1) expansion of existing agricultural activities qualifying under subsection  
1905    D.53. of this subsection;

1906                (2) conversion of one type of agricultural activity to another, including  
1907    changing the types of crops harvesting method or changing from crops to livestock,  
1908    qualifying under subsection D.53. of this section; or

1909                (3) establishment of new agricultural activities; ((where:

1910                a. the site is predominantly involved in the practice of agriculture;))

1911                b. agriculture is the primary activity on the site;

1912                c. there is no expansion or new activity in((to)) an area that:

1913                (1) has been cleared under a class I, II, III, IV-S<sub>2</sub> or nonconversion IV-G  
1914    forest practice permit; ((or))

1915                (2) is ~~((more than ten thousand square feet with tree cover at a uniform~~  
1916    ~~density more than ninety trees per acre and with the predominant mainstream diameter of~~  
1917    ~~the trees at least four inches diameter at breast height, not including))~~ an aquatic area or a  
1918    wetland, except grazed or tilled wet meadows; or

1919                (3) is a wetland buffer or riparian area that contains predominately native  
1920    forest overstory, shrub, or herbaceous layer. Native forest overstory, shrub, or

1921 herbaceous layer excludes areas ~~((that are actively managed as agricultural crops for~~  
 1922 ~~pulpwood, Christmas trees or ornamental nursery stock))~~ where native species are  
 1923 commercially planted and harvested as crops; and  
 1924 ~~((e-))~~ d. the activities are ~~((in compliance))~~ consistent with an approved farm  
 1925 management plan in accordance with K.C.C. 21A.24.051, including any best  
 1926 management practices applicable to the activity~~((; and~~  
 1927 ~~d. all best management practices associated with the activities specified in the~~  
 1928 ~~farm management plan are installed and maintained)).~~  
 1929 55. Only allowed if:  
 1930 a. associated with an activity that qualifies under subsection D.53. or D.54. of  
 1931 this section;  
 1932 b. located in an existing grazed, ~~((or))~~ tilled ~~((wet meadows or their buffers if:~~  
 1933 ~~a. the facilities are designed to the standards of an approved farm management~~  
 1934 ~~plan in accordance K.C.C. 21A.24.051 or an approved livestock management plan in~~  
 1935 ~~accordance with K.C.C. chapter 21A.30)), or impervious area;~~  
 1936 c. there is no expansion or new activity in areas identified in subsection D.54.c.  
 1937 of this section;  
 1938 ~~((b-))~~ d. there is ~~((not a))~~ no other feasible alternative location available on the  
 1939 site that is located outside of the critical area or associated buffer; ~~((and~~  
 1940 ~~e-))~~ e. the alteration is consistent with an approved farm management plan in  
 1941 accordance with K.C.C. 21A.24.051, including any best management practices applicable  
 1942 to the activity; and

1943                f. ~~the ((facilities are))~~ alteration is located as close to the outside edge of the  
1944 critical area or critical area buffer to the maximum extent practical; and

1945                g. within a severe channel migration hazard area, the alteration is located:  
1946                    (1) outside of the shoreline jurisdiction; and  
1947                    (2) in an area with the least risk from channel migration.

1948                56. ~~((Only allowed in:~~

1949                    a. ~~(1) a severe channel migration hazard area located outside of the shorelines~~  
1950 ~~jurisdiction area;~~

1951                    (2) ~~grazed or tilled wet meadow or wet meadow buffer; or~~  
1952                    (3) ~~aquatic area buffer; and only if:~~

1953                    b. ~~(1) the applicant demonstrates that adverse impacts to the critical area and~~  
1954 ~~critical area buffers have been minimized;~~

1955                    (2) ~~there is not another feasible location available on the site that is located~~  
1956 ~~outside of the critical area or critical area buffer;~~

1957                    (3) ~~the farm pad is designed to the standards in an approved farm~~  
1958 ~~management plan in accordance with K.C.C. 21A.24.051; and~~

1959                    (4) ~~for proposals located in the severe channel migration hazard area, the~~  
1960 ~~farm pad or livestock manure storage facility is located where it is least subject to risk~~  
1961 ~~from channel migration.~~

1962                57.)) Allowed for new agricultural drainage ~~((in compliance))~~ consistent with an  
1963 approved farm management plan in accordance with K.C.C. 21A.24.051 ~~((and all))~~,  
1964 including any best management practices ((associated with)) applicable to the ((activities  
1965 specified in the farm management plan are installed and maintained)) activity.

1966 ((58.-H)) 57. Allowed as follows:

1967 a. if conducted in accordance with an approved forest management plan or

1968 farm management plan in accordance with K.C.C. 21A.24.051; or

1969 b. without an approved forest management plan or farm management plan,

1970 only if:

1971 (1) the agricultural drainage is not used by salmonids~~((, maintenance shall be~~

1972 ~~in compliance with an approved farm management plan in accordance with K.C.C.~~

1973 ~~21A.24.051));~~

1974 (2) vegetation removal is undertaken with hand labor, including handheld

1975 mechanical tools, unless the King County noxious weed control board otherwise

1976 prescribes the use of riding mowers, light mechanical cultivating equipment, herbicides,

1977 or biological control methods;

1978 (3) the area is stabilized to avoid regrowth or regeneration of noxious weeds;

1979 (4) the cleared area is revegetated with native vegetation or climate-adaptive

1980 plants and stabilized against erosion; and

1981 (5) herbicide use is in accordance with federal and state law.

1982 58. Only for maintenance of agricultural waterways if:

1983 a. the purpose of the maintenance is to improve agricultural production on a

1984 site predominately engaged in the practice of agriculture;

1985 b. the maintenance is conducted in compliance with a hydraulic project

1986 approval issued by the Washington state Department of Fish and Wildlife in accordance

1987 with chapter 77.55 RCW;

1988                    c. the maintenance complies with the King County agricultural drainage  
1989 assistance program as agreed to by the Washington state Department of Fish and  
1990 Wildlife, the department of local services, permitting division, and the department of  
1991 natural resources and parks, and as reviewed by the Washington state Department of  
1992 Ecology;

1993                    d. the person performing the maintenance and the landowner have attended  
1994 training provided by King County on the King County agricultural drainage assistance  
1995 program and the best management practices required under that program;

1996                    e. the maintenance complies with K.C.C. chapter 16.82; and

1997                    f. the alteration is consistent with an approved farm management plan in  
1998 accordance with K.C.C. 21A.24.051.

1999                    59. Allowed ~~((within existing landscaped areas or other previously disturbed~~  
2000 ~~areas))~~ on sites with an activity that qualifies under subsections D.53. or 54. of this  
2001 section when:

2002                    a. consistent with an approved farm management plan in accordance with  
2003 K.C.C. 21A.24.051, including any best management practices applicable to the activity;

2004                    b. there is no other feasible location with less impact on critical areas and  
2005 associated buffers;

2006                    c. in compliance with the Surface Water Design Manual, which includes:

2007                    (1) farmland dispersion requirements for properties within an Agricultural  
2008 Production District, enrolled in the Farmland Preservation Program, or zoned A; or

2009                    (2) any applicable flow control best management practices for all other  
2010 properties;

2011                    d. access is located where it is least subject to risk from channel migration;  
2012                    e. a floodplain development permit is obtained for any action within the  
2013 floodplain; and  
2014                    f. all other required state and federal permits have been obtained and actions  
2015 comply with such permits.

2016                    60. ~~((Allowed for residential utility service distribution lines to residential~~  
2017  ~~dwellings, including, but not limited to, well water conveyance, septic system~~  
2018  ~~conveyance, water service, sewer service, natural gas, electrical, cable and telephone, if:~~  
2019                    ~~a. there is no alternative location with less adverse impact on the critical area~~  
2020  ~~or the critical area buffer;~~  
2021                    ~~b. the residential utility service distribution lines meet all of the following, to~~  
2022  ~~the maximum extent practical:~~

2023                    ~~(1) are not located over habitat used for salmonid rearing or spawning or by a~~  
2024  ~~species listed as endangered or threatened by the state or federal government unless the~~  
2025  ~~department determines that there is no other feasible crossing site;~~

2026                    ~~(2) not located over a type S aquatic area;~~

2027                    ~~(3) paralleling the channel or following a down valley route near the channel~~  
2028  ~~is avoided;~~

2029                    ~~(4) the width of clearing is minimized;~~

2030                    ~~(5) the removal of trees greater than twelve inches diameter at breast height is~~  
2031  ~~minimized;~~

2032                    ~~(6) an additional, contiguous, and undisturbed critical area buffer, equal in~~  
2033  ~~area to the disturbed critical area buffer area is provided to protect the critical area;~~

2034 ~~(7) access for maintenance is at limited access points into the critical area~~  
2035 ~~buffer.~~

2036 ~~(8) the construction occurs during approved periods for instream work;~~

2037 ~~(9) bored, drilled or other trenchless crossing is encouraged, and shall be~~  
2038 ~~laterally constructed at least four feet below the maximum depth of scour for the base~~  
2039 ~~flood; and~~

2040 ~~(10) open trenching across Type O or Type N aquatic areas is only used~~  
2041 ~~during low flow periods or only within aquatic areas when they are dry.)) Limited to~~  
2042 nonresidential farm structures only in grazed or tilled wet meadows, wetland buffers,  
2043 riparian areas where:

2044 a. the primary use of the site is an activity qualifying under subsection D.53. or  
2045 54. of this section;

2046 b. the structure is consistent with an approved farm management plan in  
2047 accordance with K.C.C. 21A.24.051, including any best management practices applicable  
2048 to the structure;

2049 c. the structure is either:

2050 (1) on or adjacent to existing nonresidential impervious surface areas,  
2051 additional impervious surface area is not created waterward of any existing impervious  
2052 surface areas, and the area was not used for crop production;

2053 (2) higher in elevation and no closer to the critical area than its existing  
2054 position; or

2055 (3) at a location away from existing impervious surface areas that is  
2056 determined to be the optimum location in the farm management plan;

2057                    d. installation of fencing in accordance with K.C.C. chapter 21A.30 does not  
2058   require the development of a farm management plan if required best management  
2059   practices are followed and the installation does not require clearing of critical areas or  
2060   their buffers; and

2061                    e. in an alluvial fan hazard area or a severe channel migration hazard area if:

2062                    (1) there is no feasible alternative location on-site;

2063                    (2) the structure is located where it is least subject to risk from alluvial fan  
2064   hazards or channel migration;

2065                    (3) the structure is not used to house animals or store hazardous substances;  
2066   and

2067                    (4) the total footprint of all accessory structures within the severe channel  
2068   migration hazard area will not exceed the greater of one thousand square feet or two  
2069   percent of the severe channel migration hazard area on the site.

2070                    61. Allowed if sponsored or cosponsored by the countywide flood control zone  
2071   district, or the department of natural resources and parks and the department of local  
2072   services, permitting division, determines that the project and its location:

2073                    a. is the best flood risk reduction alternative ~~((practicable))~~ practical;

2074                    b. is part of a comprehensive, long-term flood management strategy;

2075                    c. is consistent with the King County Flood Management Plan policies;

2076                    d. will have the least ~~((adverse))~~ impact on the ecological functions of the  
2077   critical area or ~~((its))~~ associated buffer, including habitat for fish and wildlife that are  
2078   identified for protection in the King County Comprehensive Plan; and

2079                    e. has been subject to public notice in accordance with K.C.C. 20.44.060.

2080           62.a. Not allowed in wildlife habitat conservation areas;

2081           b. Only allowed if:

2082           (1) the project is sponsored or cosponsored by a public agency whose primary

2083 function ~~((deals with))~~ is natural resources management;

2084           (2) the project is located on public land or on land that is owned by a

2085 nonprofit agency whose primary function ~~((deals with))~~ is natural resources management;

2086           (3) there is not a feasible alternative location available on the site with less

2087 impact to the critical area or ~~((its))~~ associated buffer;

2088           (4) the aquatic area or wetland is not for salmonid rearing or spawning;

2089           (5) the project minimizes the footprint of structures and the number of access

2090 points to any critical areas; and

2091           (6) the project meets the following design criteria:

2092           (a) to the maximum extent practical size of platform shall not exceed one

2093 hundred square feet;

2094           (b) all construction materials for any structures, including the platform,

2095 pilings, exterior and interior walls, and roof, are constructed of nontoxic material, such as

2096 nontreated wood, vinyl-coated wood, nongalvanized steel, plastic, plastic wood,

2097 fiberglass, or cured concrete that the department determines will not have an ~~((adverse))~~

2098 impact on water quality;

2099           (c) the exterior of any structures are sufficiently camouflaged using netting

2100 or equivalent to avoid any visual deterrent for wildlife species to the maximum extent

2101 practical. The camouflage shall be maintained to retain concealment effectiveness;

2102 (d) structures shall be located outside of the wetland or aquatic area  
2103 landward of the ~~((Θ))~~ordinary ~~((H))~~high ~~((W))~~water ~~((M))~~mark or open water  
2104 component, ~~((f))~~if applicable~~((t))~~, to the maximum extent practical on the site;  
2105 (e) construction occurs during approved periods for work inside the  
2106 ~~((Θ))~~ordinary ~~((H))~~high ~~((W))~~water ~~((M))~~mark;  
2107 (f) construction associated with bird blinds shall not occur from March 1  
2108 through August 31, in order to avoid disturbance to birds during the breeding, nesting,  
2109 and rearing seasons;  
2110 (g) to the maximum extent practical, provide accessibility for persons with  
2111 physical disabilities in accordance with the International Building Code;  
2112 (h) trail access is designed in accordance with public rules adopted by the  
2113 department;  
2114 (i) existing native vegetation within the critical area will remain undisturbed  
2115 except as necessary to accommodate the ~~((proposal))~~ project. Only minimal hand  
2116 clearing of vegetation is allowed; and  
2117 (j) disturbed bare ground areas around the structure ~~((must))~~ shall be  
2118 ~~((replanted))~~ revegetated with native vegetation or climate-adaptive plants approved by  
2119 the department.  
2120 63. ~~((Not a))~~Allowed ~~((in the severe channel migration zone,))~~ if there is no  
2121 alternative location with less ~~((adverse))~~ impact on the critical area and buffer, and  
2122 clearing is minimized to the maximum extent practical.

2123           64. ~~((Only structures wholly or partially supported by a tree and used as~~  
2124 ~~accessory living quarters or for play and similar uses described in K.C.C. 16.02.240.1,~~  
2125 ~~subject to the following:~~

2126           ~~a. not allowed in wildlife habitat conservation areas or severe channel~~  
2127 ~~migration hazard areas;~~

2128           ~~b. the structure's floor area shall not exceed two hundred square feet, excluding~~  
2129 ~~a narrow access stairway or landing leading to the structure;~~

2130           ~~c. the structure shall be located as far from the critical area as practical, but in~~  
2131 ~~no case closer than seventy five feet from the critical area;~~

2132           ~~d. only one tree supported structure within a critical area buffer is allowed on a~~  
2133 ~~lot;~~

2134           ~~e. all construction materials for the structure, including the platform, pilings,~~  
2135 ~~exterior and interior walls, and roof, shall be constructed of nontoxic material, such as~~  
2136 ~~nontreated wood, vinyl coated wood, nongalvanized steel, plastic, plastic wood,~~  
2137 ~~fiberglass or cured concrete that the department determines will not have an adverse~~  
2138 ~~impact on water quality;~~

2139           ~~f. to the maximum extent practical, the exterior of the structure shall be~~  
2140 ~~camouflaged with natural wood and earth tone colors to limit visual impacts to wildlife~~  
2141 ~~and visibility from the critical area. The camouflage shall be maintained to retain~~  
2142 ~~concealment effectiveness;~~

2143           ~~g. the structure must not adversely impact the long term health and viability of~~  
2144 ~~the tree. The evaluation shall include, but not be limited to, the following:~~

2145           ~~(1) the quantity of supporting anchors and connection points to attach the tree~~  
2146   ~~house to the tree shall be the minimum necessary to adequately support the structure;~~  
2147           ~~(2) the attachments shall be constructed using the best available tree anchor~~  
2148   ~~bolt technology; and~~  
2149           ~~(3) an ISA Certified Arborist shall evaluate the tree proposed for placement~~  
2150   ~~of the tree house and shall submit a report discussing how the tree's long-term health and~~  
2151   ~~viability will not be negatively impacted by the tree house or associated infrastructure;~~  
2152           ~~h. exterior lighting shall meet the following criteria:~~  
2153           ~~(1) limited to the minimum quantity of lights necessary to meet the building~~  
2154   ~~code requirements to allow for safe exiting of the structure and stairway; and~~  
2155           ~~(2) exterior lights shall be fully shielded and shall direct light downward, in~~  
2156   ~~an attempt to minimize impacts to the nighttime environment;~~  
2157           ~~i. unless otherwise approved by the department, all external construction shall~~  
2158   ~~be limited to September 1 through March 1 in order to avoid disturbance to wildlife~~  
2159   ~~species during typical breeding, nesting, and rearing seasons;~~  
2160           ~~j. trail access to the structure shall be designed in accordance with trail~~  
2161   ~~standards under subsection D.47. of this section;~~  
2162           ~~k. to the maximum extent practical, existing native vegetation shall be left~~  
2163   ~~undisturbed. Only minimal hand clearing of vegetation is allowed; and~~  
2164           ~~l. vegetated areas within the critical area buffer that are temporarily impacted~~  
2165   ~~by construction of the structure shall be restored by planting native vegetation according~~  
2166   ~~to a vegetation management plan approved by the department.)) Allowed within existing~~  
2167   ~~landscaped areas or other previously disturbed areas.~~

2168               65. Shoreline water dependent and shoreline water oriented uses are allowed in  
2169 ~~((the aquatic area and aquatic area buffer of a T))~~ type S aquatic area and adjacent riparian  
2170 area if consistent with K.C.C. chapter 21A.25, chapter 90.58 RCW, and the ~~((King~~  
2171 ~~County))~~ Comprehensive Plan.

2172               66. Only hydroelectric ~~((generating))~~ generation facilities meeting the  
2173 requirements of K.C.C. 21A.08.100.B.14., and only as follows:

2174               a. there is ~~((not another))~~ no other feasible location within the aquatic area with  
2175 less ~~((adverse))~~ impact on the critical area and ~~((its))~~ associated buffer;

2176               b. the facility and corridor ~~((is))~~ are not located over habitat used for salmonid  
2177 rearing or spawning or by a species listed as endangered or threatened by the state or  
2178 federal government unless the department determines that there is no other feasible  
2179 location;

2180               c. the facility is not located in Category I wetlands or Category II wetlands  
2181 with a habitat score of ~~((8))~~ eight points or greater;

2182               d. the corridor width is minimized to the maximum extent practical;

2183               e. paralleling the channel or following a down-valley route within ~~((an aquatic~~  
2184 ~~area buffer))~~ a riparian area is avoided to the maximum extent practical;

2185               f. the construction occurs during approved periods for instream work;

2186               g. the facility and corridor will not change or adversely impact the overall  
2187 aquatic area flow peaks, duration or volume or the flood storage capacity;

2188               h. ~~((the facility and corridor is not))~~ no new facilities are located within a  
2189 severe channel migration hazard area;

2190 i. to the maximum extent practical, buildings will be located outside the  
2191 wetland buffer or riparian area and away from the wetland or aquatic area (~~((or wetland))~~);

2192 j. to the maximum extent practical, access for maintenance is at limited access  
2193 points into the critical area or associated buffer rather than by a parallel maintenance  
2194 road. If a parallel maintenance road is necessary, the following standards are met:

2195 (1) to the maximum extent practical the width of the maintenance road is  
2196 minimized and in no event greater than fifteen feet; and

2197 (2) the location of the maintenance road is contiguous to the utility corridor  
2198 on the side of the utility corridor farthest from the critical area;

2199 k. the facility does not pose an unreasonable threat to the public health, safety,  
2200 or welfare on or off the development proposal site and is consistent with the general  
2201 purposes of this chapter and the public interest; and

2202 l. the facility connects to or is an alteration to a public roadway, public trail, a  
2203 utility corridor or utility facility, or other infrastructure owned or operated by a public  
2204 utility.

2205 67. Only hydroelectric (~~((generating))~~) generation facilities meeting the  
2206 requirements of K.C.C. 21A.08.100.B.14, and only as follows:

2207 a. there is no(~~((t-an))~~)other feasible location with less (~~((adverse))~~) impact on the  
2208 critical area and (~~((its))~~) associated buffer;

2209 b. the alterations will not subject the critical area to an increased risk of  
2210 landslide or erosion;

2211 c. the corridor width is minimized to the maximum extent practical;

2212 d. vegetation removal is the minimum necessary to locate the utility or  
2213 construct the corridor;

2214 e. the facility and corridor do not pose an unreasonable threat to the public  
2215 health, safety, or welfare on or off the development proposal site and ~~((is))~~ are consistent  
2216 with the general purposes of this chapter, and the public interest and significant risk of  
2217 personal injury ~~((is))~~ are eliminated or minimized in the landslide hazard area; and

2218 f. the facility connects to or is an alteration to a public roadway, public trail, a  
2219 utility corridor or utility facility or other infrastructure owned or operated by a public  
2220 utility.

2221 68. Only for a single detached dwelling unit on a lake twenty acres or larger and  
2222 only as follows:

2223 a. the heat exchanger ~~((must))~~ shall be a closed loop system that does not draw  
2224 water from or discharge to the lake;

2225 b. the lake bed shall not be disturbed, except as required by the county or a  
2226 state or federal agency to mitigate for impacts of the heat exchanger;

2227 c. the in-water portion of system is only allowed where water depth exceeds  
2228 six feet; and

2229 d. system structural support for the heat exchanger piping shall be attached to  
2230 an existing dock or pier or be attached to a new structure that meets the requirements of  
2231 K.C.C. 21A.25.180.

2232 69. ~~((Only for maintenance of agricultural waterways if:~~  
2233 ~~a. the purpose of the maintenance project is to improve agricultural production~~  
2234 ~~on a site predominately engaged in the practice of agriculture;~~

2235           ~~b. the maintenance project is conducted in compliance with a hydraulic project~~  
2236 ~~approval issued by the Washington state Department of Fish and Wildlife pursuant to~~  
2237 ~~chapter 77.55 RCW;~~

2238           ~~c. the maintenance project complies with the King County agricultural~~  
2239 ~~drainage assistance program as agreed to by the Washington state Department of Fish and~~  
2240 ~~Wildlife, the department of local services, permitting division, and the department of~~  
2241 ~~natural resources and parks, and as reviewed by the Washington state Department of~~  
2242 ~~Ecology;~~

2243           ~~d. the person performing the maintenance and the landowner have attended~~  
2244 ~~training provided by King County on the King County agricultural drainage assistance~~  
2245 ~~program and the best management practices required under that program; and~~

2246           ~~e. the maintenance project complies with K.C.C. chapter 16.82)) Repealed.~~

2247           SECTION 50. Ordinance 15051, Section 138, as amended, and K.C.C.

2248 21A.24.051 are hereby amended to read as follows:

2249           A. ~~((The alterations identified in K.C.C. 21A.24.045 for a))~~Agricultural activities  
2250 ~~((are allowed to expand within the buffers of wetlands, aquatic areas and wildlife habitat~~  
2251 ~~conservation areas, when an agricultural activity is currently occurring on the site and the~~  
2252 ~~alteration is in compliance with an approved farm management plan in accordance with))~~  
2253 allowed under K.C.C. 21A.24.045 shall meet the requirements of this section.

2254           B. For the purposes of this chapter, proof of agricultural activities and  
2255 commercial production of agricultural products may be demonstrated through one or  
2256 more of the following:

2257           1. filing of an IRS schedule F for the preceding year;

2258           2. currently holds a USDA organic certification producer certification;  
2259           3. enrolled in the current use classification "farm and agricultural land" under  
2260 chapter 84.34 RCW;  
2261           4. meets the eligibility for current use classification "farm and agricultural land"  
2262 under chapter 84.34 RCW with proof of enrollment within two years; or  
2263           5. other comparable documentation of commercial farming activity accepted by  
2264 the department.  
2265           C. Farm management plans shall be consistent with this section and, for livestock  
2266 activities, ((a farm management plan in accordance)) also consistent with K.C.C. chapter  
2267 21A.30.  
2268           ~~((B.))~~ D. This section does not modify any requirement that the property owner  
2269 obtain permits for activities covered by the farm management plan.  
2270           ~~((C. The department of natural resources and parks or its designee shall serve as~~  
2271 ~~the single point of contact for King County in providing information on farm~~  
2272 ~~management plans for purposes of this title. The department of natural resources and~~  
2273 ~~parks shall adopt a public rule governing the development of farm management plans.~~  
2274 ~~The rule may provide for different types of farms management plans related to different~~  
2275 ~~kinds of agricultural activities, including, but not limited to the best management~~  
2276 ~~practices for livestock management, livestock crossing, livestock heavy use areas,~~  
2277 ~~horticulture management, site development, farm pads, farm field access roads, and~~  
2278 ~~agricultural drainage.~~

2279           ~~D.))~~ E. A property owner or applicant seeking to use the process to allow  
2280 alterations in critical area buffers shall develop a farm management plan based on the  
2281 following goals, which are listed in order of priority:

- 2282           1. To maintain the productive agricultural land base and economic viability of  
2283 agriculture on the site;
- 2284           2. To maintain, restore, or enhance critical areas to the maximum extent  
2285 practical in accordance with the site-specific goals of the landowner;
- 2286           3. To the maximum extent practical in accordance with the site-specific goals of  
2287 the landowner, maintain, and enhance natural hydrologic systems on the site;
- 2288           4. To use federal, state, and local best management practices and best available  
2289 science for farm management to achieve the goals of the farm management plan; and
- 2290           5. To monitor the effectiveness of best management practices and implement  
2291 additional practices through adaptive management to achieve the goals of the farm  
2292 management plan.

2293           ~~((E.))~~ F. If a part or all of the site is located within the shoreline jurisdiction, the  
2294 farm management plan shall:

- 2295           1. Consider and be consistent with the goals of the shoreline management act  
2296 and the policies of the King County shoreline master program;
- 2297           2. Consider the priorities of the King County shoreline protection and  
2298 restoration plan; and
- 2299           3. Ensure no net loss of shoreline ecological functions and critical area functions  
2300 and values.

2301           ~~((F. The property owner or applicant may develop the farm management plan as~~  
2302 ~~part of a program offered or approved by King County.))~~ G. The plan shall include, but  
2303 is not limited to, the following elements:

- 2304           1. A site inventory identifying critical areas, structures, cleared and forested  
2305 areas, and other significant features on the site;
- 2306           2. Site-specific performance standards and best management practices to  
2307 maintain, restore, or enhance critical areas and ~~((their))~~ associated buffers, and maintain  
2308 and enhance native vegetation on the site, including the best management practices for  
2309 the installation and maintenance of farm field access drives and agricultural drainages;
- 2310           3. A plan for future changes to any existing structures or for any changes to the  
2311 landscape that involve clearing or grading;
- 2312           4. A plan for implementation of performance standards and best management  
2313 practices;
- 2314           5. A plan for monitoring the effectiveness of measures taken to protect critical  
2315 areas and ~~((their))~~ associated buffers ~~((and to modify))~~. Modification to the farm  
2316 management plan shall occur if ~~((adverse))~~ impacts ~~((occur))~~ to critical areas or  
2317 associated buffers are identified.

2318           ~~((G.))~~ H. If applicable, a farm management plan shall include documentation of  
2319 compliance with flood compensatory storage and flood conveyance in accordance with  
2320 K.C.C. 21A.24.240.

2321           ~~((H. A))~~ I. For purposes of applying the regulations in K.C.C. chapter 21A.24, a  
2322 farm management plan is not effective until approved by the county. Before approval,  
2323 the county may conduct a site inspection, ((which may be through a program offered or

2324 ~~approved by King County,))~~ to verify that the plan is ~~((reasonably))~~ likely to accomplish  
2325 the goals in subsection ~~((D-))~~ E. of this section and consistent with subsection ~~((E-))~~ E. of  
2326 this section.

2327 ~~((I-))~~ J. ~~((Once approved, a))~~ Activities carried out ((in compliance)) consistent  
2328 with ((the)) an approved farm management plan shall be deemed in compliance with this  
2329 chapter. In the event of a potential code enforcement action, ((the department of local  
2330 services, permitting division, shall first inform the department of natural resources and  
2331 parks of the activity. Before taking code enforcement action,)) the department of local  
2332 services, permitting division, shall consult with the department of natural resources and  
2333 parks and the King Conservation District to determine whether the activity is consistent  
2334 with the farm management plan.

2335 SECTION 51. Ordinance 15051, Section 140, as amended, and K.C.C.  
2336 21A.24.061 are hereby amended to read as follows:

2337 A. The King County council recognizes that ~~((rural stewardship plans and))~~ farm  
2338 management plans ~~((are key elements of this chapter that))~~ provide flexibility to natural  
2339 resource land and rural area residents to establish and maintain a rural lifestyle that  
2340 includes activities such as farming ~~((and forestry))~~, while maintaining and enhancing  
2341 rural character and environmental quality.

2342 B. The department of natural resources and parks shall be responsible for farm  
2343 management plans that are filed with the county and serve as the primary county agency  
2344 point of contact. The department of natural resources and parks shall consult with the  
2345 department of local services, permitting division, in carrying out the responsibilities  
2346 under this chapter relating to farm management plans. King County and the King

2347 Conservation District may enter into agreements to carry out the provisions of this title  
2348 relating to farm management plans.

2349 C.1. The department of natural resources and parks and department of local  
2350 services shall adopt public rules to implement K.C.C. 21A.24.045 (~~and~~), 21A.24.051  
2351 (~~relating to rural stewardship plans and farm management plans~~), and K.C.C.  
2352 21A.30.045, consistent with the provisions of this section. The rules shall (~~not~~  
2353 compromise) be consistent with the King Conservation District's mandates or standards  
2354 for farm management planning. The rules may provide for different types of farms  
2355 management plans related to different kinds of agricultural activities, including, but not  
2356 limited to best management practices for livestock management, livestock crossing,  
2357 livestock heavy use areas, horticulture management, site development, farm pads, farm  
2358 field access roads, and agricultural drainage.

2359 2. In addition to the notification procedures required by K.C.C. chapter 2.98 and  
2360 under the State Environmental Policy Act, for the rule making under this section required  
2361 by this ordinance and each subsequent update to the public rule, the director of natural  
2362 resources and parks shall:

2363 a. Request comment from Indian tribes no less than sixty days before the  
2364 adoption of the final rule;

2365 b. Meet with and consider the comments of Indian tribes before adoption of the  
2366 final rule; and

2367 c. Provide, as supplemental material to the final rule, a summary of comments  
2368 received from Indian tribes on the proposed rule, and a response with how the final rule  
2369 addresses the comments.

2370           3. The public rule required as a result of this ordinance shall be effective no  
2371 later than December 31, 2026, and the public rule shall be evaluated and updated in  
2372 conjunction with the Comprehensive Plan update required by K.C.C. 20.18.030.C. or as  
2373 needed to address time sensitive issues including, but not limited to, substantive changes  
2374 in state or local critical area regulations or substantive findings from critical area  
2375 monitoring or adaptive management.

2376           ~~((C.))~~ D. County departments or approved agencies shall provide technical  
2377 assistance and resources to landowners to assist them in preparing the plans. The  
2378 technical assistance shall include, but is not limited to, web-based information,  
2379 instructional manuals, and classroom workshops. When possible, ~~((the assistance shall~~  
2380 ~~be provided at little or no cost to landowners))~~ the cost of such assistance shall be  
2381 minimal to the landowner. ~~((In addition, t))~~ The department of natural resources and  
2382 parks shall develop, in consultation as necessary with the department of local services,  
2383 permitting division, and the King Conservation District, ~~((and make available to the~~  
2384 ~~public,))~~ model farm management~~((, forest management and rural stewardship))~~ plans  
2385 illustrating examples of plan application content, drawings, and site plans, ~~((to assist~~  
2386 ~~landowners in their development of site specific plans for their property))~~ and make them  
2387 available to the public.

2388           ~~((D. The department of natural resources and parks is the primary county agency~~  
2389 ~~responsible for rural stewardship plans and farm management plans that are filed with the~~  
2390 ~~county under this chapter. The department of natural resources and parks shall consult~~  
2391 ~~with the department of local services, permitting division, in carrying out its~~  
2392 ~~responsibilities under this chapter relating to rural stewardship plans and farm~~

2393 management plans. ~~The department of natural resources and parks, the department of~~  
2394 ~~local services, permitting division, and the King Conservation District may enter into~~  
2395 ~~agreements to carry out the provisions of this chapter relating to rural stewardship plans~~  
2396 ~~and farm management plans.))~~

2397 E. The department of natural resources and parks and department of local  
2398 services, permitting division, shall monitor and evaluate the effectiveness of ((~~rural~~  
2399 ~~stewardship and~~)) farm management plans in meeting the goals and objectives of those  
2400 plans established in this chapter.

2401 SECTION 52. Ordinance 10870, Section 454, as amended, and K.C.C.  
2402 21A.24.070 are hereby amended to read as follows:

2403 A. ~~((The director may approve alterations to))~~ If application of this chapter denies  
2404 all reasonable use or prohibits a development proposal, an applicant may apply for an  
2405 exception in accordance with this section. Except in flood hazard areas, alluvial fan  
2406 hazard areas, and severe channel migration hazard areas, an exception under this section  
2407 may be allowed in critical areas, critical area buffers, and critical area setbacks~~((, except~~  
2408 ~~for flood hazard areas, not otherwise allowed by this chapter as follows:~~

2409 1. ~~Except as otherwise provided in subsection A.2. of this section, for linear~~  
2410 ~~alterations, the director may approve alterations to critical areas, critical area buffers and~~  
2411 ~~critical area setbacks only when)).~~

2412 B. A request for an exception in the shoreline jurisdiction shall be processed as a  
2413 shoreline variance under K.C.C. 21A.44.090.

2414 C. A public agency or utility may apply for a critical area alteration exception if  
2415 application of this chapter denies a development proposal. A public agency or utility  
2416 critical area alteration exception shall meet all of the following criteria ~~((are met))~~:

2417 ~~((a-))~~1. ~~((t))~~There is no feasible alternative to the development proposal with  
2418 less ~~((adverse))~~ impact on the critical area;

2419 ~~((b-))~~2. ~~((t))~~The development proposal minimizes ~~((the adverse))~~ impacts on  
2420 critical areas to the maximum extent practical and complies with avoidance and  
2421 mitigation sequencing in K.C.C. 21A.24.125;

2422 ~~((c-))~~3. ~~((t))~~The ~~((approval))~~ exception does not require the modification of a  
2423 critical area development standard established by this chapter;

2424 ~~((d-))~~4. ~~((t))~~The development proposal does not pose an unreasonable threat to  
2425 the public health, safety, or welfare on or off the development proposal site and is  
2426 consistent with the general purposes of this chapter and the public interest;

2427 ~~((e- the))~~5. For linear alterations:

2428 ~~((f-))~~a. the alteration connects to or is ~~((an alteration to))~~ a public roadway,  
2429 regional light rail transit line, public trail, ~~((a))~~ utility corridor or utility facility, railroad,  
2430 hydroelectric generation facility, or other public infrastructure owned or operated by a  
2431 public utility; or

2432 ~~((g-))~~b. the alteration is required to overcome limitations due to gravity;

2433 ~~((2- In order to accommodate the siting of a regional light rail transit facility~~  
2434 ~~under RCW 36.70A.200, the director may approve alterations to critical areas, critical~~  
2435 ~~area buffers and critical area setbacks not otherwise allowed by this chapter and may~~

2436 ~~impose reasonable conditions to minimize the impact of the light rail transit facility on~~  
 2437 ~~the critical area and its buffer;)) and~~

2438 ~~((3. F))~~ 6. For nonlinear alterations ((the director may approve alterations to  
 2439 ~~critical areas except wetlands, unless otherwise allowed under subsection A.3.h. of this~~  
 2440 ~~section, aquatic areas and wildlife habitat conservation areas, and alterations to critical~~  
 2441 ~~area buffers and critical area setbacks, when all of the following criteria are met)):~~

2442       a. a regional light rail transit facility under RCW 36.70A.200 may be allowed  
 2443 in any critical area, critical area buffer, or critical area setback, except those identified in  
 2444 subsection A. of this section;

2445       b. a public school in a category II, III, and IV wetland may be allowed; and

2446       c. all other nonlinear alterations shall not be located in an aquatic area, wildlife  
 2447 habitat conservation area, wetland, or fish spawning area;

2448       D. A property owner may apply for a private development critical area alteration  
 2449 exception if application of this chapter denies a development proposal in a steep slope  
 2450 hazard, landslide hazard area, riparian area, critical aquifer recharge area, wildlife habitat  
 2451 network, critical area buffer, or critical area setback. A private development critical area  
 2452 alteration exception shall meet all of the following criteria:

2453       1. ((†))There is no feasible alternative to the development proposal with less  
 2454 ~~((adverse))~~ impact on the critical area;

2455       2. The development proposal minimizes impacts on critical areas to the  
 2456 maximum extent practical and complies with avoidance and mitigation sequencing in  
 2457 K.C.C. 21A.24.125;

2458           ~~((b-))~~ 3. ~~((t))~~The alteration is the minimum necessary to accommodate the  
2459 development proposal;

2460           ~~((e-))~~ 4. ~~((t))~~The ~~((approval))~~ exception does not require the modification of a  
2461 critical area development standard established by this chapter;

2462           ~~((d-))~~ 5. ~~((t))~~The development proposal does not pose an unreasonable threat to  
2463 the public health, safety, or welfare on or off the development proposal site and is  
2464 consistent with the general purposes of this chapter and the public interest;

2465           ~~((e-))~~ 6. ~~((t))~~For dwelling units, no more than five thousand square feet or ten  
2466 percent of the site, whichever is greater, may be disturbed by structures, ~~((building))~~  
2467 critical area setbacks, or other land alteration, including grading, utility installations ~~((and~~  
2468 ~~landscaping))~~, but not including the area used for a driveway or for an on-site sewage  
2469 disposal system~~((. When the site disturbance is within a critical area buffer, the building~~  
2470 ~~setback line shall be measured from the building footprint to the edge of the approved site~~  
2471 ~~disturbance;~~

2472           ~~f. to the maximum extent practical, access is located to have the least adverse~~  
2473 ~~impact on the critical area and critical area buffer)); and~~

2474           ~~g-))~~ 7. ~~((t))~~The critical area is not ~~((used as))~~ a ~~((salmonid))~~ fish spawning  
2475 area~~((; and~~

2476           ~~h. the director may approve an alteration in a category II, III, and IV wetland~~  
2477 ~~for development of a public school facility.~~

2478           ~~B. The director may approve alterations to critical areas, critical area buffers, and~~  
2479 ~~critical area setbacks, except for flood hazard areas,)).~~

2480           E. An applicant may apply for a reasonable use exception if the application of  
2481 this chapter would deny all reasonable use of the property ~~((as follow))~~. A reasonable use  
2482 exception shall meet all of the following:

2483           1. ~~((If the critical area, critical area buffer or critical area setback is outside of~~  
2484 ~~the shoreline jurisdiction, the applicant may apply for a reasonable use exception under~~  
2485 ~~this subsection without first having applied for an alteration exception under this section~~  
2486 ~~if the requested reasonable use exception includes relief from development standards for~~  
2487 ~~which an alteration exception cannot be granted under this section. The director shall~~  
2488 ~~determine that all of the following criteria are met:~~

2489           ~~a. t))~~ There is no other reasonable use with less ((adverse)) impact on the  
2490 critical area;

2491           2. The development proposal minimizes impacts on critical areas to the  
2492 maximum extent practical and complies with avoidance and mitigation sequencing in  
2493 K.C.C. 21A.24.125;

2494           3. The alteration is the minimum necessary to allow for reasonable use of the  
2495 property; and

2496           ~~((b-))~~ 4. The development proposal does not pose an unreasonable threat to the  
2497 public health, safety, or welfare on or off the development proposal site and is consistent  
2498 with the general purposes of this chapter and the public interest;

2499           ~~((e. any authorized alteration to the critical area or critical area buffer is the~~  
2500 ~~minimum necessary to allow for reasonable use of the property;)) and~~

2501           ~~((d-))~~ 5. ~~((f))~~ For dwelling units, no more than five thousand square feet or ten  
2502 percent of the site, whichever is greater, may be disturbed by structures, ((building))

2503 critical area setbacks, or other land alteration, including grading, utility installations, and  
2504 maintained yard and landscaping, but not including the area used for a driveway or for an  
2505 on-site sewage disposal system(~~(; and~~

2506 ~~2. If the critical area, critical area buffer or critical area setback is located within~~  
2507 ~~the shoreline jurisdiction, the request for a reasonable use exception shall be considered a~~  
2508 ~~request for a shoreline variance under K.C.C. 21A.44.090)).~~

2509 ~~((C.))~~ F. For the purpose of this section:

2510 1. ~~((("Linear" alteration means infrastructure that supports development that is~~  
2511 ~~linear in nature and includes public and private roadways, public trails, private~~  
2512 ~~driveways, railroads, regional light rail transit, hydroelectric generating facilities, utility~~  
2513 ~~corridors and utility facilities))~~ When a site disturbance is within a critical area or  
2514 associated buffer, the critical area setback line shall be measured from the edge of a  
2515 structure to the edge of the approved site disturbance; and

2516 2. ~~((For purposes of subsections A. and B. of this section, a))~~ Areas located  
2517 ~~((within the shoreline jurisdiction that are))~~ below the ordinary high water mark shall not  
2518 be included in calculating the site area.

2519 ~~((D. Alteration))~~ G. ~~((e))~~ Exceptions approved under this section shall meet the  
2520 mitigation requirements of this chapter.

2521 ~~((E.))~~ H. An ~~((applicant))~~ application for an ~~((alteration))~~ exception shall  
2522 ~~((submit))~~ provide a critical area report(~~(; as required by))~~ consistent with K.C.C.  
2523 21A.24.110.

2524 I. An exception shall not be approved if the inability of the applicant to derive  
2525 reasonable use of the property is the result of actions by the current or prior property  
2526 owner.

2527 SECTION 53. Ordinance 10870, Section 456, as amended, and K.C.C.  
2528 21A.24.090 are hereby amended to read as follows:

2529 ~~((If a development proposal site contains or is within a critical area, the applicant~~  
2530 ~~shall submit an affidavit which declares whether))~~ An applicant for a development permit  
2531 or a critical area designation under K.C.C. 21A.24.500, as recodified by this ordinance,  
2532 shall provide:

2533 A. A disclosure of critical areas on the development proposal site, including  
2534 mapped or identifiable critical areas within the largest potential critical area buffer; and

2535 B. An affidavit indicating whether ~~((F))~~ the applicant has knowledge of any  
2536 illegal alteration to ~~((any or all))~~ critical areas or associated buffers on the development  
2537 proposal site~~((; and~~

2538 ~~B. The applicant previously has been found in violation of this chapter, in~~  
2539 ~~accordance with K.C.C. Title 23. If the applicant previously has been found in violation,~~  
2540 ~~the applicant shall declare whether the violation has been corrected to the satisfaction of~~  
2541 ~~King County)).~~

2542 SECTION 54. K.C.C. 21A.24.500, as amended by this ordinance, is hereby  
2543 recodified as a new section in K.C.C. chapter 21A.24 to follow K.C.C. 21A.24.090.

2544 SECTION 55. Ordinance 14187, Section 1, as amended, and K.C.C. 21A.24.500  
2545 are hereby amended to read as follows:

2546 A.~~((1.))~~ A property owner or ~~((the property owner's agent))~~ applicant may  
2547 ~~((request))~~ apply for a critical area designation for part or all of a site ~~((, without seeking~~  
2548 ~~a permit for a development proposal, by filing with the department a written application~~  
2549 ~~for a critical area designation on a form provided by the department))~~.  
2550 1. ~~((If the request is for review of a portion of a site, t))~~The application shall  
2551 include a map identifying ((the portion of)) the ((site for which the designation is sought))  
2552 parcel.  
2553 2. ~~((The designation may include an evaluation or interpretation of the~~  
2554 ~~applicability of critical area buffers and other critical area standards to a future~~  
2555 ~~development proposal.))~~ Supporting critical area reports consistent with K.C.C.  
2556 21A.24.110 may be required by the department.  
2557 B. ~~((In preparing the critical area designation, the department shall perform a~~  
2558 ~~critical area review to:~~  
2559 1. ~~Determine whether any critical area exists on the site and confirm its type,~~  
2560 ~~location, boundaries and classification;~~  
2561 2. ~~Determine whether a critical area report is required to identify and~~  
2562 ~~characterize the location, boundaries and classification of the critical area;~~  
2563 3. ~~Evaluate the critical area report, if required; and~~  
2564 4. ~~Document the existence, location and classification of any critical area.~~  
2565 C. ~~If required by the department, the applicant for a critical area designation shall~~  
2566 ~~prepare and submit to the department the critical area report required by subsection B.2.~~  
2567 ~~of this section. For sites zoned for single detached dwelling units involving wetlands or~~

2568 aquatic areas, the applicant may elect to have the department conduct the special study in  
2569 accordance with K.C.C. Title 27;

2570 ~~D. The department shall make the determination of a critical area designation in~~  
2571 ~~writing within one hundred twenty days after the application for a critical area~~  
2572 ~~designation is complete, as provided in K.C.C. 20.20.050. The periods in K.C.C.~~  
2573 ~~20.20.100.A.1. through 5. are excluded from the one hundred twenty day period. If the~~  
2574 ~~determination applies to less than an entire site, the determination))~~ The department shall  
2575 evaluate and determine the existence, location, and classification of any critical areas  
2576 within the area indicated on the application. The designation shall clearly identify the  
2577 portion of the ((site)) parcel to which the determination applies.

2578 ~~((E.1.))~~ C. The written determination made under this section is final and  
2579 effective for five years from the date of issuance as to the existence, location,  
2580 classification of any critical area ~~((and critical area buffers))~~ on the site, unless:

2581 ~~((a.))~~ 1. ((t)) There is a change in site conditions;  
2582 ~~((b.))~~ 2. New or additional information becomes available that conflicts with or  
2583 invalidates information that formed the basis of the department's determination,  
2584 including, but not limited to, discovery of an unpermitted critical area alteration or the  
2585 adoption of revised methods for critical area classification; or

2586 3. A county, state, or federal agency adopts one of the following critical area  
2587 maps that conflict with the department's ((written)) determination((:));

2588 a. Critical aquifer recharge areas;  
2589 b. Wildlife habitat network;  
2590 c. Channel migration zones;

2591 d. Flood hazard areas.

2592 ~~((2. As part of its review of a complete application for a permit or approval, the~~  
2593 ~~department shall establish whether the written determination is still effective.~~

2594 ~~F. If the department designates critical areas on a site under this section, the~~  
2595 ~~applicant for a development proposal on that site shall submit proof that a critical area~~  
2596 ~~notice has been filed as required by K.C.C. 21A.24.170. Except as provided in this~~  
2597 ~~subsection, the department's determination under this section is final. If the department~~  
2598 ~~relies on a critical area designation made under this section during its review of an~~  
2599 ~~application for a permit or other approval of a development proposal and the permit or~~  
2600 ~~other approval is subject to an administrative appeal, any appeal of the designation shall~~  
2601 ~~be consolidated with and is subject to the same appeal process as the underlying~~  
2602 ~~development proposal. If the King County hearing examiner makes the county's final~~  
2603 ~~decision with regard to the permit or other approval type for the underlying development~~  
2604 ~~proposal, the hearing examiner's decision constitutes the county's final decision on the~~  
2605 ~~designation. If the King County council, acting as a quasi-judicial body, makes the~~  
2606 ~~county's final decision with regard to the permit or other approval type for the underlying~~  
2607 ~~development proposal, the King County council's decision constitutes the county's final~~  
2608 ~~decision on the designation.))~~

2609 SECTION 56. Ordinance 10870, Section 457, as amended, and K.C.C.

2610 21A.24.100 are hereby amended to read as follows:

2611 A. ~~((Before any clearing, grading or site preparation, t))~~The department shall  
2612 perform a critical area review ~~((for any))~~ of development ~~((proposal))~~ permit applications  
2613 or other request ~~((for permission))~~ to alter a site to determine ~~((whether there is))~~:

2614 1. The existence, location, and classification of ((A)) critical areas and active  
 2615 breeding sites of protected species:

2616 a. on the ((development proposal)) site; and  
 2617 ~~((2. An active breeding site of a protected species on the development proposal~~  
 2618 ~~site; or~~

2619 3. ~~A critical area or active breeding site of a protected species that has been~~  
 2620 ~~mapped, identified within three hundred feet of the applicant's property or that is visible~~  
 2621 ~~from the boundaries of the site)) b. within three hundred feet of the site that can be~~  
 2622 identified by use of available data and methods, including, but not limited to, visual  
 2623 observations from right-of-way or property with right of entry, mapping, aerial imagery,  
 2624 and other critical area determinations and critical area reports;

2625 2. The boundaries of critical area buffers and critical area setbacks that apply to  
 2626 the site and area within three hundred feet of the site, consistent with the standards and  
 2627 regulations of this chapter; and

2628 3. Compliance with all other standards and regulations of this chapter.

2629 B. As part of the critical area review, the department shall review ~~((the critical~~  
 2630 ~~area reports and determine))~~ whether:

2631 1. ~~((There has been an accurate identification of all critical areas))~~ Critical area  
 2632 designations under K.C.C. 21A.24.500, as recodified by this ordinance, are effective;

2633 2. ~~((An alteration will occur to a critical area or a critical area buffer))~~ Critical  
 2634 area reports are required;

2635 3. ~~((The development proposal is consistent with this chapter))~~ Critical areas,  
2636 associated buffers, and critical area setbacks have been applied to the site and accurately  
2637 identified, delineated, and classified in the application;

2638 4. ~~((The sequence))~~ Proposed alterations comply with avoidance and mitigation  
2639 sequencing in K.C.C. 21A.24.125 ~~((has been followed to avoid impacts to critical areas~~  
2640 ~~and critical area buffers))~~; ~~((and))~~

2641 5. Proposed ~~((M))~~ mitigation measures to compensate for ~~((adverse))~~ impacts to  
2642 critical areas ~~((is required and whether the mitigation and monitoring plans and bonding~~  
2643 ~~measures proposed by the applicant are sufficient to protect the general public health,~~  
2644 ~~safety and welfare,))~~ and associated buffers are in compliance with K.C.C. 21A.24.130  
2645 and all other applicable requirements of this chapter; and

2646 6. Proposed alterations are consistent with the goals, purposes, objectives, and  
2647 requirements of this chapter.

2648 C. If a development proposal does not involve any site disturbance, clearing, or  
2649 grading and only requires a permit or approval under K.C.C. chapters 16.04 or 17.04,  
2650 critical area review is not required, unless the development proposal is located within a:

2651 1. Flood hazard area;

2652 2. Critical aquifer recharge area; or

2653 3. Landslide hazard area, alluvial fan hazard area, steep slope hazard area,  
2654 seismic hazard area, or coal mine hazard area and the proposed development will cause  
2655 additional loads on the foundation, such as by expanding the habitable square footage of  
2656 the structure or by adding or changing structural features that change the load bearing  
2657 characteristics of the structure.

2658 D. The determinations made under critical area review of a development proposal  
2659 permit application shall be consolidated with and subject to the same appeal process as  
2660 the underlying development proposal, except for any determinations made under an  
2661 effective critical area designation under K.C.C. 21A.24.500, as recodified by this  
2662 ordinance, that are classified as an standalone decision under K.C.C. 20.20.020.

2663 SECTION 57. Ordinance 10870, Section 458, as amended, and K.C.C.  
2664 21A.24.110 are hereby amended to read as follows:

2665 A. ~~((An applicant for a development proposal that requires))~~ A critical area report  
2666 may be required with a critical area review under K.C.C. 21A.24.100 ~~((shall submit))~~ or  
2667 K.C.C. 21A.24.500, as recodified by this ordinance. The department may modify or limit  
2668 the scope of a critical area report ~~((at a level determined by the department))~~ if  
2669 information is not needed to adequately evaluate the proposal and all probable impacts.

2670 B. In addition to the requirements in this section, critical area reports shall also  
2671 include ecological and geological report information in sections 58 and 59 of this  
2672 ordinance based on the affected critical area:

2673 1. Geological critical area report requirements under section 58 of this  
2674 ordinance apply to alluvial fan hazard areas, channel migration zones, coal mine hazard  
2675 areas, critical aquifer recharge areas, erosion hazard areas, landslide hazard areas, seismic  
2676 hazard areas, steep slope hazard areas, tsunami hazard areas, volcanic hazard areas, and  
2677 associated buffers; and

2678 2. Ecological critical area report requirements under section 59 of this  
2679 ordinance apply to aquatic areas, riparian areas, wetlands, wildlife habitat conservation  
2680 areas, wildlife habitat networks, and associated buffers.

2681 B. ~~((The applicant may combine a-e))~~ Critical area reports may be combined with  
2682 any additional studies required by other laws and regulations.

2683 C. If the development proposal will affect only a part of the development  
2684 proposal site, the department may limit the scope of the required critical area report to  
2685 include only that part of the site that is affected by the development proposal.

2686 D.1. Floodplain development that was not assessed through the King County  
2687 Programmatic Habitat Assessment prepared for the National Flood Insurance program  
2688 and the Endangered Species Act shall include an assessment of the impact of the  
2689 alteration on water quality and aquatic and riparian habitat. The assessment shall be:

2690 a. ~~((A))~~ a Biological Evaluation or Biological Assessment that has received  
2691 concurrence from the United States Fish and Wildlife Service or the National Marine  
2692 Fisheries Service, pursuant to Section 7 of the Endangered Species Act;

2693 b. ~~((D))~~ documentation that the activity fits within a Habitat Conservation Plan  
2694 approved pursuant to Section 10 of the Endangered Species Act;

2695 c. ~~((D))~~ documentation that the activity fits within Section 4(d) of the  
2696 Endangered Species Act; or

2697 d. ~~((A))~~ an assessment prepared in accordance with Regional Guidance for  
2698 Floodplain Habitat Assessment and Mitigation, FEMA Region X, ~~((2010))~~ April 2011.

2699 The assessment shall determine if the project ~~((would))~~ adversely affects any ~~((one or~~  
2700 ~~more))~~ of the following:

2701 (1) the primary constituent elements identified when a species is listed as  
2702 threatened or endangered;

2703 (2) Essential Fish Habitat designated by the National Marine Fisheries  
2704 Service;

2705 (3) fish and wildlife habitat conservation areas;

2706 (4) vegetation communities and habitat structures;

2707 (5) water quality;

2708 (6) water quantity, including flood and low flow depths, volumes, and  
2709 velocities;

2710 (7) the river or stream channel's natural planform pattern and migration  
2711 process;

2712 (8) spawning substrate, if applicable; and

2713 (9) floodplain refugia, if applicable.

2714 ((2. The department must require a project with adverse effects to comply with  
2715 the impact avoidance, minimization and mitigation requirements of K.C.C. 21A.24.125  
2716 and 21A.24.130)).

2717 NEW SECTION. SECTION 58. There is hereby added to K.C.C. chapter 21A.24  
2718 a new section to read as follows:

2719 A. A geological critical area report shall meet the requirements of this section.

2720 B. The geological critical area report shall address all areas of the proposed  
2721 development site and geologically hazardous areas within three hundred feet of the site or  
2722 that have the potential to affect or be affected by the proposal.

2723 C. The geological critical area report shall be prepared, stamped, and signed by a  
2724 geological professional. The geological assessment shall include a field investigation and  
2725 may include the use of historical aerial photo analysis, review of public records and

2726 documentation, and interviews with adjacent property owners or others knowledgeable  
2727 about the area, as well as other methods approved by the department. The geological  
2728 assessment shall include a detailed review of the field investigations, published data and  
2729 references, data and conclusions from past geological assessments, or geotechnical  
2730 investigations of the site, site-specific measurements, tests, investigations, or studies, as  
2731 well as the methods of data analysis and calculations that support the results, conclusions,  
2732 and recommendations.

2733 D. The geological critical area report shall contain, at a minimum, the following  
2734 information:

2735 1. Basic information including:

2736 a. the name and contact information of the applicant; the name, qualifications,  
2737 and contact information for the primary author or authors of the report; and a description  
2738 of the proposal; and

2739 b. parcel number or numbers of the site;

2740 2. A description of site conditions that includes:

2741 a. existing development including structures, impervious surfaces, wells, drain  
2742 fields, drain field reserve areas, roads, easements, and above and below ground utilities;

2743 b. the extent, quantity and type of existing vegetation cover;

2744 c. a description of the ground surface inclination in percent gradient;

2745 d. a description and location of the surface and subsurface hydrology,  
2746 including, but not limited to, wetlands, aquatic areas, springs, seeps, or other surface  
2747 expressions of groundwater. The director may require a hydrogeologic report to  
2748 accompany the geotechnical assessment if impacts are anticipated;

2749 e. identification and characterization of all critical areas and buffers and areas  
2750 within the shoreline jurisdiction;

2751 3. A site plan that includes:

2752 a. the existing topography with vertical contour intervals of five feet or less,  
2753 for the entire site and abutting public rights-of-way, private roads, or access easements;

2754 b. significant geologic contacts, landslides, or downslope soil movement on  
2755 and within three hundred feet of the site;

2756 c. all identified geologically hazardous areas, buffers, and critical area  
2757 setbacks;

2758 d. exploration locations;

2759 e. locations of proposed development and clearing limits, if known;

2760 f. transects of any provided cross-sections;

2761 g. drainage flow characteristics including pipes, drains, catch basins, drainage  
2762 structures, culverts, underdrain pipes, and other structures;

2763 4. A description of the geological conditions of the soils and bedrock that  
2764 includes:

2765 a. references to mapped geological soil and bedrock units, seismic faults,  
2766 landslides, alluvial fans, potential liquefaction zones, channel migration zones, and  
2767 historical coal mines;

2768 b. data regarding underlying geology, slope gradients, soil types, and  
2769 subsurface information including boring or test pit logs describing soil stratification, and  
2770 results of soil tests conducted.

2771 c. a description of the soils in accordance with the Natural Resource  
2772 Conservation Service, indicating the potential for erosion;  
2773 d. review of the site history regarding landslides, erosion, and prior grading;  
2774 e. geomorphological features of the site visible through site inspection, aerial  
2775 photography, LIDAR imagery, or topographic contours;  
2776 f. on-site soil explorations of sufficient location, distribution, and depth to  
2777 adequately characterize the subsurface conditions of the site. Soils analysis shall be  
2778 accomplished in accordance with accepted classification systems in use in the region;  
2779 g. engineering properties of the subsurface soils or bedrock or both;  
2780 h. identification of all existing fill areas;  
2781 i. the location or evidence of seismic faults and soil conditions indicating the  
2782 potential for liquefaction;  
2783 5. A hazard analysis and finding of risks associated with relevant geologic  
2784 hazards and the potential impacts to public safety, the hazard area, and the subject  
2785 property, including, but not limited to:  
2786 a. slope stability;  
2787 b. potential for liquefaction hazard;  
2788 c. debris runout, including from upslope on the site or from neighboring  
2789 properties and on down slope properties from the site and proposed development;  
2790 d. channel migration;  
2791 e. erosion rates, slope recession rates, bluff retreat rates, and potential impacts  
2792 to existing or proposed development from waves or currents, stream meandering, or other

2793 erosional forces to determine the recommended solution for bank or shoreline  
2794 stabilization in conformance with K.C.C. 21A.25.170;

2795 6. An evaluation of proposed development which includes:

2796 a. the location and description of proposed development activity;

2797 b. the method of drainage and locations of all existing and proposed surface  
2798 and subsurface drainage facilities and patterns, including infiltration testing or other  
2799 geological review specifics as required by the Surface Water Design Manual;

2800 c. the locations and methods for temporary and permanent erosion control;

2801 d. recommendations for temporary and permanent structure siting limitations,  
2802 and foundation type and depth;

2803 e. recommendations on minimum buffers and setbacks for the specific  
2804 geological hazard;

2805 f. recommendations for grading procedures, fill placement and compaction  
2806 criteria, handling contaminated soils and materials, temporary and permanent slope  
2807 inclinations and support, and design criteria for corrective measures and opinions and  
2808 recommendations regarding the capabilities of the site;

2809 g. an estimate of bluff retreat rate that recognizes and reflects potential  
2810 catastrophic events such as seismic activity or one-hundred-year storm event;

2811 h. recommendations for engineering mitigation of hazards; and

2812 i. recommendations for vegetation management to mitigate hazards;

2813 7. A determination stating whether the alterations minimize risks to people and  
2814 development in accordance with the development standards of this chapter, and rationale

2815 to support the determination based on the presented data, analysis, and scientific and  
2816 engineering practice;

2817 8. An evaluation of how avoidance and mitigation sequencing, consistent with  
2818 K.C.C. 21A.24.125, was applied to the development proposal.

2819 9. All subsurface exploration logs, test logs and results, and other data sources  
2820 used in the analyses, and

2821 10. Any other information determined by the department to be necessary to  
2822 determine compliance with this chapter, including, but not limited to, the use of LIDAR,  
2823 technical reports, soil field or laboratory testing, studies or documents related to geologic  
2824 hazards, or models for estimating how far landslide materials will travel.

2825 NEW SECTION. SECTION 59. There is hereby added to K.C.C. chapter 21A.24  
2826 a new section to read as follows:

2827 A. An ecological critical area report shall meet the requirements of this section.

2828 B. The ecological critical area report shall address all areas of the proposed  
2829 development site and ecological critical areas within three hundred feet of the site or that  
2830 have the potential to affect or be affected by the proposal.

2831 C. The ecological critical area report shall be prepared and signed by an  
2832 ecological professional.

2833 D. The ecological critical area report shall contain, at a minimum, the following  
2834 information:

2835 1. Wetland, aquatic area, and riparian area delineation that includes:

2836 a. identification of wetlands and delineation of associated boundaries in  
2837 accordance with the approved federal wetland delineation manual and applicable regional

2838 supplement as set forth in WAC 173-22-035, including completed data forms and data  
2839 point locations;

2840           b. rating of wetlands in accordance with the Washington State Wetland Rating  
2841 System for Western Washington Version 2.0, Washington state Department of Ecology  
2842 publication number 23-06-009, published 2014 and updated 2023, including completed  
2843 rating forms;

2844           c. identification of aquatic area locations, typing, and ordinary high water  
2845 mark;

2846           d. identification of severe channel migration hazard areas and floodplains; and  
2847           e. determination of applicable wetland buffers and riparian areas;

2848           2. A wildlife study and habitat assessment that identifies any known nests or  
2849 breeding sites and potential habitat for any federal or state listed endangered, threatened,  
2850 sensitive, or candidate species or King County species of local importance, and delineates  
2851 any known wildlife habitat conservation areas and wildlife habitat networks;

2852           3. A description of existing on-site and adjacent site conditions that includes:  
2853           a. existing development, including, but not limited to, structures, roads,  
2854 impervious surfaces, utilities, clearing, grading, and easements, and whether any existing  
2855 development is not legally established;

2856           b. the extent and dominant species composition of existing vegetative cover;  
2857           c. existing hydrologic characteristics of any wetland or aquatic areas, including  
2858 sources of hydrology;

2859           d. functions and values of all critical areas present; and

2860 e. location, species, and diameter at breast height of trees three inches in  
2861 diameter at breast height or larger within critical areas and associated buffers that are  
2862 within the proposed clearing limits and within striking distance of the proposed  
2863 development activity. The department may require tree locations to be surveyed;

2864 4. An evaluation of how avoidance and mitigation sequencing, consistent with  
2865 K.C.C. 21A.24.125, was applied to the development proposal.

2866 5. If impacts to critical areas or buffers are proposed, an analysis that includes:

2867 a. calculation of square footage of direct permanent impacts to each critical  
2868 area and buffer;

2869 b. calculation of square footage of temporary impacts to each critical area and  
2870 associated buffer, and estimation of the time required for ecological functions to be  
2871 restored;

2872 c. calculation of indirect impacts to wetlands in accordance with Wetland  
2873 Mitigation in Washington State: Part 1 Agency Report and Guidance, Version 2  
2874 Washington state Department of Ecology, publication number 21-06-003, published  
2875 April 2021;

2876 d. description of vegetation, habitat, functions, and values of each critical area  
2877 that will be lost or modified due to the proposed impacts;

2878 e. an analysis demonstrating that the hydrology of remaining wetlands on or  
2879 adjacent to the site will not be substantially impacted by the project, using the wetland  
2880 hydrology protection guidelines in the Surface Water Design Manual; and

2881           f. a tree risk assessment prepared by an arborist certified by the International  
2882 Society of Arboriculture for any hazard trees proposed for removal within critical areas  
2883 or associated buffers;

2884           6. A mitigation plan that includes:

2885           a. evaluation of on-site potential for enhancement, rehabilitation, restoration,  
2886 or creation of critical areas and associated buffers for which mitigation is required;

2887           b. description of on-site mitigation activities proposed and justification that  
2888 impacts will be adequately offset to ensure no net loss of critical area functions and  
2889 values, including use of the credit-debit method as applicable for wetland impacts in  
2890 accordance with Washington state Department of Ecology's Calculating Credits and  
2891 Debits of Compensatory Mitigation in Wetlands of Western Washington: Final Report,  
2892 publication 10-06-011, published 2010 and updated 2012, or subsequent updates;

2893           c. calculations of mitigation area required for permanent impacts or long-term  
2894 temporary impacts, based on the ratios specified within K.C.C. chapter 21A.24;

2895           d. calculation of restoration area required for temporary impacts where  
2896 ecological functions are expected to be restored within one year;

2897           e. depiction of proposed mitigation and restoration areas and example of  
2898 planting plan, including irrigation if applicable;

2899           f. plan for installation of wildlife lighting;

2900           g. depiction of wildlife-passable fencing and permanent critical area signs at  
2901 the edges of critical areas, associated buffers, and disturbed areas, as applicable, and

2902                   h. rationale for and description of any proposed off-site mitigation, including  
2903 location, methods, quantities, and demonstration that equal or better ecological functions  
2904 will be achieved;

2905                   7. A monitoring plan that includes:

2906                   a. a monitoring schedule of at least five years, unless otherwise directed by the  
2907 department to address site-specific conditions such as inclination over twenty percent,  
2908 excessively drained soils, or mitigation occurs in wetland;

2909                   b. success criteria for mitigation activities to meet at the end of each  
2910 monitoring year;

2911                   c. monitoring methods sufficient to determine if success criteria are being met  
2912 throughout the mitigation area;

2913                   d. a maintenance plan to ensure success criteria are met; and

2914                   e. a contingency plan if it is determined that mitigation fails to meet success  
2915 criteria;

2916                   8. A site plan depicting:

2917                   a. critical areas on the site and within three hundred feet of the site;

2918                   b. buffer widths;

2919                   c. critical area setbacks;

2920                   d. existing and proposed alterations, including, but not limited to, structures,  
2921 impervious surfaces, utilities, clearing, landscaping, and grading; and

2922                   e. property lines, setbacks, and easements; and

2923                   9. Additional information determined by the department to be necessary to  
2924 comply with this chapter.

2925            SECTION 60. Ordinance 15051, Section 149, as amended, and K.C.C.  
2926    21A.24.125 are hereby amended to read as follows:

2927            ~~((A. An applicant for a development proposal or alteration, shall apply the~~  
2928    ~~following sequential measures, which appear in order of priority,))~~ When an alteration to  
2929    a critical area is proposed, the following avoidance and mitigation sequencing shall be  
2930    applied in the following order of priority to avoid and minimize impacts to critical areas  
2931    and critical area buffers:

2932            ~~((1.))~~ A. Avoiding the impact or hazard by not taking a certain action;

2933            ~~((2.))~~ B. Minimizing the impact or hazard by:

2934            ~~((a.))~~ 1. limiting the degree or magnitude of the action with appropriate  
2935    technology; or

2936            ~~((b.))~~ 2. taking affirmative steps to avoid or reduce impacts, such as project  
2937    redesign, relocation, or timing;

2938            ~~((3.))~~ C. Rectifying the impact ~~((to critical areas))~~ by repairing, rehabilitating, or  
2939    restoring the affected critical area or its buffer;

2940            ~~((4.))~~ D. Minimizing or eliminating the hazard by restoring or stabilizing the  
2941    hazard area through engineered or other methods;

2942            ~~((5.))~~ E. Reducing or eliminating the impact or hazard over time by preservation  
2943    or maintenance operations during the life of the ~~((development proposal or))~~ alteration;

2944            ~~((6.))~~ F. Compensating for the ~~((adverse))~~ impact by replacing or enhancing  
2945    critical areas and their buffers or creating substitute critical areas and their buffers; and

2946            ~~((7.))~~ G. Monitoring the impact, hazard, or success of required mitigation and  
2947    taking ~~((remedial))~~ corrective action.

~~((B. The specific mitigation requirements of this chapter for each critical area or requirements determined through the resource mitigation reserves program apply when compensation for adverse impacts is required by the sequence in subsection A. of this section.))~~

SECTION 61. Ordinance 10870, Section 460, as amended, and K.C.C. 21A.24.130 are hereby amended to read as follows:

A. ~~((If m))~~ Mitigation ~~((is))~~ required under this chapter ~~((to compensate for adverse impacts, unless otherwise provided, an applicant))~~ shall:

1. ~~((Mitigate adverse impacts to:~~  
a. ~~critical areas and their buffers; and~~  
b. ~~the development proposal as a result of the proposed alterations on or near the critical areas; and~~

2. ~~Monitor the performance of any required mitigation))~~ Only occur after avoidance and mitigation sequencing is applied consistent with K.C.C. 21A.24.125;

2. Achieve no net loss of critical area functions;

3. Prevent risk from hazards posed by the critical area; and

4. Not create impacts on other critical area functions.

B. ~~((The department shall not approve a development proposal until mitigation and monitoring plans are in place to mitigate for alterations to critical areas and buffers))~~  
Preferential consideration shall be given to measures that replace the impacted functions directly and in the immediate vicinity of the impact.

C. ~~((Whenever mitigation is required, an applicant shall submit a critical area report that includes:~~

2971           1. ~~An analysis of potential impacts;~~  
2972           2. ~~A mitigation plan that meets the specific mitigation requirements in this~~  
2973 ~~chapter for each critical area impacted; and~~  
2974           3. ~~A monitoring plan that includes:~~  
2975           a. ~~a demonstration of compliance with this title;~~  
2976           b. ~~a contingency plan in the event of a failure of mitigation or of unforeseen~~  
2977 ~~impacts if:~~  
2978           (1) ~~the department determines that failure of the mitigation would result in a~~  
2979 ~~significant impact on the critical area or buffer; or~~  
2980           (2) ~~the mitigation involves the creation of a wetland; and~~  
2981           c. ~~a monitoring schedule that may extend throughout the impact of the activity~~  
2982 ~~or, for hazard areas, for as long as the hazard exists.))~~ A critical area report and  
2983 mitigation and monitoring plan is required for any development proposal that includes  
2984 mitigation.  
2985           D. The department shall require appropriate safeguards, terms, or conditions as  
2986 necessary to ensure no net loss of critical area functions as conditions of approval for  
2987 mitigation measures, including, but not limited to, conservation easements, financial  
2988 guarantees in accordance with K.C.C. Title 27A, and performance monitoring.  
2989           E. Mitigation shall ~~((not))~~ be implemented ~~((until))~~ after the department approves  
2990 ~~((the))~~ mitigation and monitoring plans. The applicant shall notify the department when  
2991 mitigation is installed and monitoring ~~((is))~~ has commenced and shall provide King  
2992 County with reasonable access to the ~~((mitigation))~~ site for the purpose of inspections  
2993 during ~~((any))~~ the monitoring period.

2994           ~~((E.))~~ F. If monitoring reveals a significant deviation from predicted impact or a  
2995 failure of mitigation requirements, the applicant shall implement an approved  
2996 contingency plan. The contingency plan constitutes new mitigation and is subject to all  
2997 mitigation requirements, including a revised monitoring plan, ~~((and))~~ revised financial  
2998 guarantees, ~~((requirements))~~ and an extension of the monitoring period by at least two  
2999 years.

3000           SECTION 62. Ordinance 15051, Section 151, as amended, and K.C.C.  
3001 21A.24.133 are hereby amended to read as follows:

3002           A. ~~((To the maximum extent practical, an applicant shall mitigate adverse~~  
3003 ~~impacts to a wetland, aquatic area wildlife habitat conservation area or wildlife habitat~~  
3004 ~~network))~~ Mitigation shall be prioritized on or contiguous to the development site.  
3005 Preferential consideration shall be given to measures that replace the impacted functions  
3006 directly and in the immediate vicinity of the impact.

3007           B. The department may approve mitigation that is off-site ~~((the development~~  
3008 ~~site))~~ if an applicant demonstrates that:

- 3009           1. It is not practical to mitigate on or contiguous to the development proposal  
3010 site; ~~((and))~~
- 3011           2. The off-site mitigation will achieve ~~((equivalent or greater))~~ equal or better  
3012 hydrological, water quality, and ~~((wetland or aquatic area))~~ habitat functions((-)); and
- 3013           3. The off-site mitigation addresses limiting factors or identified critical needs  
3014 for critical area resource conservation based on watershed or comprehensive resource  
3015 management plans applicable to the area of impact.

3016 B. ~~((When off-site mitigation is authorized, t))~~The department shall give priority  
3017 to locations within the same drainage subbasin as the development proposal site and that  
3018 meet the following:

- 3019 1. Mitigation banking sites and resource mitigation reserves as authorized by  
3020 this chapter;
- 3021 2. Private mitigation sites that are established in compliance with the  
3022 requirements of this chapter and approved by the department; ~~((and))~~ or
- 3023 3. Public mitigation sites that have been ranked in a process ~~((that has been))~~  
3024 supported by ecological assessments, including wetland and aquatic areas established as  
3025 priorities for mitigation in King County ~~((basin plans or other))~~ watershed plans.

3026 C. The department ~~((may))~~ shall require ~~((documentation))~~ that the mitigation site  
3027 ~~((has been))~~ be permanently preserved from future development or alteration that would  
3028 be inconsistent with the functions of the mitigation. The applicant shall provide  
3029 documentation ~~((may include, but is not limited to,))~~ such as a conservation easement or  
3030 other agreement between the applicant and owner of the mitigation site. King County  
3031 may enter into agreements or become a party to any easement or other agreement  
3032 necessary to ensure that the site continues to exist in its mitigated condition.

3033 D. The department shall maintain a list of sites available for use for off-site  
3034 mitigation projects.

3035 E.1. The department ~~((and the department of natural resources and parks have~~  
3036 ~~develop a program to allow the payment of a fee in lieu of providing mitigation on a~~  
3037 ~~development site.))~~ may approve mitigation through the King County mitigation reserve  
3038 program. The program addresses:

3039 a. when the payment of a fee is allowed considering the availability of a site in  
3040 geographic proximity with comparable hydrologic and biological functions and potential  
3041 for future habitat fragmentation and degradation; and

3042 b. the use of the fees for mitigation on public or private sites that have been  
3043 ~~((ranked according to ecological criteria through one or more programs that have~~  
3044 ~~included a public process))~~ selected using a watershed approach, in accordance with the  
3045 approved in-lieu fee program instrument.

3046 2. The in lieu fee mitigation program shall submit a report by May 1 in the first  
3047 year of the biennial budget cycle, filed in the form of ~~((a paper original and))~~ an  
3048 electronic copy with the clerk of the council, who shall retain the original and provide an  
3049 electronic copy to all councilmembers, the council chief of staff, and the lead staff for the  
3050 transportation economy and environment committee or its successor. The report should  
3051 address the following:

- 3052 a. information on the amount and source of revenues received by the program;  
3053 b. a description and rationale for projects selected for funding;  
3054 c. an accounting of budgeted and actual expenditures made; and  
3055 d. the status of all projects approved in the previous five years, and anticipated  
3056 completion date for those projects, if not yet complete.

3057 NEW SECTION. SECTION 63. There is hereby added to K.C.C. chapter  
3058 21A.24 a new section to read as follows:

3059 A. Revegetation in critical areas and critical area buffers shall:

- 3060 1. Meet the mitigation requirements under this chapter;  
3061 2. Provide equal or better ecological function compared to existing conditions;

3062           3. Replicate the structure and function of the historic natural plant community,  
3063 except when restoring temporary impacts to a legally altered plant community;  
3064           4. Use only native or climate-adaptive plant species that are well suited to thrive  
3065 in the current and future site conditions;  
3066           5. Prioritize the selection of native vegetation, with the use of climate-adaptive  
3067 plants only when appropriate for site conditions; and  
3068           6. Include measures to restore soil and hydrologic functions when necessary.  
3069           B. The department shall consider site-specific conditions and may allow  
3070 modifications to planting plans for planting success.  
3071           C.1. The department of natural resources and parks shall adopt a public rule  
3072 establishing a list of climate-adaptive plants after consultation with Indian tribes and the  
3073 department of local services.  
3074           2. In addition to the notification procedures required by K.C.C. chapter 2.98 and  
3075 under the State Environmental Policy Act, for the initial rule making under this section  
3076 and each subsequent update to the public rule, the director of natural resources and parks  
3077 shall:  
3078           a. request comment from Indian tribes no less than 60 days before the adoption  
3079 of the final rule;  
3080           b. meet with and consider the comments of Indian tribes before adoption of the  
3081 final rule; and  
3082           c. provide, as supplemental material to the final rule, a summary of comments  
3083 received from Indian tribes on the list of climate-adaptive plants, and a response to each  
3084 of the comments with how the final rule addresses the comments.

3085           3. The initial public rule shall be effective no later than December 31, 2026, and  
3086 the public rule shall be evaluated and updated in conjunction with the Comprehensive  
3087 Plan update required by K.C.C. 20.18.030.C. or as needed to address time sensitive issues  
3088 including but not limited to, substantive changes in state or local critical area regulations  
3089 or substantive findings from critical area monitoring or adaptive management.

3090           SECTION 64. Ordinance 10870, Section 464, as amended, and K.C.C.  
3091 21A.24.170 are hereby amended to read as follows:

3092           A. Except as otherwise provided in subsection ~~((of))~~ C. of this section, the owner  
3093 of any property containing critical areas or buffers on which a development proposal is  
3094 submitted or any property on which mitigation is established ~~((as a result of~~  
3095 ~~development))~~ shall file a notice on title ~~((approved by King County))~~ with the records  
3096 and licensing services division. The notice on title shall be on a form approved by the  
3097 department and inform the public of:

- 3098           1. The presence of critical areas ~~((of))~~<sub>2</sub> buffers<sub>2</sub> or mitigation sites on the  
3099 property;  
3100           2. The application of this chapter to the property; ~~((and))~~  
3101           3. The possible existence of limitations on actions in or affecting the critical  
3102 areas or buffers or the fact that mitigation sites may exist; and  
3103           4. The existence of approved wetland buffer or riparian area averaging or  
3104 reductions on the property.

3105           B. ~~((The applicant for a development proposal shall submit p))~~Proof that the  
3106 notice ~~((required by this section))~~ on title has been filed ~~((for public record))~~ shall be  
3107 submitted before ~~((King County))~~ the department approves any development proposal for

3108 the property or((;)) before recording in the case of subdivisions, short subdivisions, and  
3109 binding site plans((, at or before recording of the subdivision, short subdivision, or  
3110 binding site plan)).

3111 C. The notice required under subsection A. of this section is not required if:

3112 1. The property is a public right-of-way or the site of a permanent public  
3113 facility;

3114 2. The development proposal does not require ((sensitive)) critical area review  
3115 under K.C.C. 21A.24.100.C.; or

3116 3. The property only contains a critical aquifer recharge area or an erosion  
3117 hazard area.

3118 D. Notices on title shall run with the land regardless of ownership, use, or land  
3119 division. However, a property owner may apply to the county to have a notice on title  
3120 removed or amended, under either of the following circumstances:

3121 1. The department, as part of a critical area review of a permit application or a  
3122 critical area designation, determines the information contained in an existing notice on  
3123 title is no longer accurate, such as in its type or location; or

3124 2. An adopted critical areas map was updated indicating a reclassification or  
3125 declassification of one of the following critical areas on the subject property:

3126 a. critical aquifer recharge areas;

3127 b. wildlife habitat network;

3128 c. channel migration zones;

3129 d. flood hazard areas.

3130            SECTION 65. Ordinance 10870, Section 465, as amended, and K.C.C.

3131    21A.24.180 are hereby amended to read as follows:

3132            A. ~~((The applicant))~~ Critical area tracts protect and enhance critical area

3133    functions and values, including, but not limited to, providing fish and wildlife habitat,

3134    and protecting the public from geologic hazards and increased stormwater runoff.

3135    Subdivisions, short subdivisions, or binding site plans shall establish critical area tracts to

3136    delineate and protect ~~((those))~~ the following critical areas and associated buffers ~~((listed~~

3137    ~~below in development proposals for subdivisions, short subdivisions or binding site plans~~

3138    ~~and shall record the tracts on all documents of title of record for all affected lots))~~:

3139            1. ~~((All))~~ Landslide hazard areas and buffers that are one acre or more in size;

3140            2. ~~((All-s))~~ Steep slope hazard areas and buffers that are one acre or more in size;

3141            3. ~~((All-w))~~ Wetlands and buffers; ~~((and))~~

3142            4. ~~((All-a))~~ Aquatic areas ~~((and buffers))~~;

3143            5. Riparian areas;

3144            6. Alluvial fan hazard areas that are one acre or more in size; and

3145            7. Wildlife habitat networks.

3146            B. A critical area tract established under subsection A. of this section shall be

3147    held either:

3148            1. ~~((held))~~ in an undivided interest by each owner of a building lot within the

3149    development with this ownership interest passing with the ownership of the lot~~((s))~~; or

3150            2. ~~((shall be held))~~ by an incorporated homeowner's association or other legal

3151    entity that ensures the ownership, maintenance, and protection of the tract.

3152 C. ~~((The long-term management goals for critical area tracts established under~~  
3153 ~~subsection A. of this section are to protect and enhance critical area functions and values,~~  
3154 ~~including, but not limited to, providing fish and wildlife habitat and protecting the public~~  
3155 ~~from geologic hazards and increased stormwater runoff.))~~ The specific management  
3156 strategy for each tract shall be clearly defined before preliminary approval of the  
3157 subdivision or binding site plan.

3158 D. For an off-site mitigation area, the applicant shall place the mitigation area in  
3159 a critical area tract in accordance with subsection A. of this section, or in a perpetual  
3160 conservation easement as approved by the director.

3161 E. In lieu of the requirements of subsections A. and D. of this section, the director  
3162 may allow an applicant to include critical areas in resource tracts established under  
3163 K.C.C. 21A.14.040.B.7. The resource tract management plan shall clearly state that the  
3164 purpose of the resource portion is for resource management and the purpose of the  
3165 designated critical areas is for critical area protection and enhancement and protecting the  
3166 public from geologic hazards and increased stormwater runoff.

3167 ~~((E.))~~ F. Site plans submitted as part of building permits, clearing, and grading  
3168 permits, or other development permits shall include and delineate:

3169 1. ~~((A.))~~ Flood hazard areas, as determined by King County in accordance  
3170 with K.C.C. 21A.24.230;

3171 2. Landslide, volcanic, tsunami, coal mine, alluvial fan, and steep slope hazard  
3172 areas;

3173 3. Aquatic areas, riparian areas, and wetlands;

3174 4. Wildlife habitat conservation areas and ~~((the))~~ wildlife habitat networks;

3175 5. Critical area ~~((B))~~ buffers; and

3176 6. ~~((Building))~~ Critical area setbacks as required by K.C.C. 21A.24.200.

3177 ~~((F.))~~ G. If only a part of the development site has been mapped, the part of the  
3178 site that has not been mapped shall be clearly identified and labeled on the site plans.

3179 SECTION 66. Ordinance 10870, Section 467, as amended, and K.C.C.  
3180 21A.24.200 are hereby amended to read as follows:

3181 Unless otherwise provided, ~~((an applicant shall set buildings and other))~~ structures  
3182 shall be set back a minimum distance of ~~((fifteen))~~ ten feet from the outside edges of all  
3183 critical areas and critical area buffers ~~((or from the edges of all critical areas, if no buffers~~  
3184 ~~are required))~~. ~~((When the))~~ If site disturbance is within a critical area or an associated  
3185 buffer, the ~~((building))~~ critical area setback ~~((line))~~ shall be measured from the ~~((building~~  
3186 ~~footprint))~~ edge of the structure to the edge of the approved site disturbance. The  
3187 following are allowed in the ~~((building))~~ critical area setback area:

3188 A. Landscaping;

3189 B. Uncovered decks;

3190 C. Building overhangs if the overhangs do not extend more than eighteen inches  
3191 into the setback area;

3192 D. Impervious ground surfaces, such as driveways and patios~~((, but the))~~;  
3193 however, improvements are required to meet any special drainage provisions specified in  
3194 public rules adopted for ~~((the various))~~ critical areas and the Surface Water Design  
3195 Manual;

3196 E. Utility service connections as long as the excavation for installation avoids  
3197 impacts to the critical area or associated buffer; and

3198 F. Minor encroachments if adequate protection of the buffer will be maintained.

3199 SECTION 67. Ordinance 11621, Section 75, as amended, and K.C.C.

3200 21A.24.275 are hereby amended to read as follows:

3201 The following development standards apply to development proposals and  
3202 alterations on sites within channel migration zones that have been mapped and adopted  
3203 by public rule:

3204 A. The development standards that apply to the ~~((aquatic area buffers))~~ riparian  
3205 areas in K.C.C. 21A.24.365 also apply to the severe channel migration ~~((zone))~~ hazard  
3206 areas and the portion of the moderate channel migration ~~((zone))~~ hazard areas that is  
3207 within the ~~((aquatic area buffer))~~ riparian areas. The more-restrictive standards apply  
3208 where there is a conflict;

3209 B. Only the alterations identified in K.C.C. 21A.24.045 are allowed within a  
3210 severe channel migration hazard area; and

3211 C. The following standards apply to development proposals and alterations  
3212 within the moderate channel migration hazard area:

3213 1. Maintenance, repair, or expansion of any use or structure is allowed if the  
3214 existing structure's footprint is not expanded towards any source of channel migration  
3215 hazard, unless the applicant can demonstrate that the location is the least subject to risk;

3216 2. New primary dwelling units, accessory dwelling units, or accessory living  
3217 quarters, and required infrastructure, are allowed if:

3218 a. the structure is located on a ~~((separate))~~ legally established lot in existence  
3219 on or before February 16, 1995;

3220                   b. a feasible alternative location outside of the channel migration hazard area is  
3221 not available on~~((-))~~ the site; and

3222                   c. to the maximum extent practical, the structure and supporting infrastructure  
3223 is located the farthest distance from any source of channel migration hazard, unless the  
3224 applicant can demonstrate that an alternative location is:

3225                   (1) the least subject to risk; or

3226                   (2) within the outer third of the moderate channel migration hazard area as  
3227 measured perpendicular to the channel;

3228                   3. New accessory structures are allowed if:

3229                   a. a feasible alternative location is not available on-site; and

3230                   b. to the maximum extent practical, the structure is located the farthest distance  
3231 from the migrating channel; and

3232                   4. The subdivision of property is allowed within the portion of a moderate  
3233 channel migration hazard area located outside ~~((an aquatic area buffer))~~ a riparian area if:

3234                   a. All lots contain five-thousand square feet or more of net buildable ~~((land))~~  
3235 area outside of the moderate channel migration hazard area;

3236                   b. Access to all lots does not cross the moderate channel migration hazard  
3237 area; and

3238                   c. All infrastructure is located outside the moderate channel migration hazard  
3239 area except that an on-site septic system is allowed in the moderate channel migration  
3240 hazard area if:

3241                   (1) a feasible alternative location is not available on-site; and

3242 (2) to the maximum extent practical, the septic system is located the farthest  
3243 distance from the migrating channel.

3244 SECTION 68. Ordinance 10870, Section 475, as amended, and K.C.C.

3245 21A.24.280 are hereby amended to read as follows:

3246 The following development standards apply to development proposals and  
3247 alterations on sites containing landslide hazard areas:

3248 A. Unless allowed as an alteration exception under K.C.C. 21A.24.070, only the  
3249 alterations identified in K.C.C. 21A.24.045 are allowed within a landslide hazard area  
3250 ~~((with a slope of forty percent or greater))~~ or associated buffer;

3251 B.1. A buffer is required from all edges of the landslide hazard area. To  
3252 eliminate or minimize the risk of property damage or injury resulting from landslides  
3253 caused in whole or part by the development, the department shall determine the size of  
3254 the buffer based upon a geological critical area report ~~((prepared by a geotechnical~~  
3255 ~~engineer or geologist.))~~;

3256 2. If a geological critical area report is not submitted to or required by the  
3257 department, the minimum buffer ~~((is))~~ shall be fifty feet~~((-))~~;

3258 3. If the landslide hazard area has a vertical rise of more than two-hundred feet,  
3259 the department may increase the minimum ~~((building))~~ critical area setback in K. C. C.  
3260 21A.24.200 to one-hundred feet; and

3261 4. For alterations associated with single detached dwelling units only, the  
3262 department may waive the geological critical area report requirement and authorize  
3263 buffer reductions if the department determines that the reduction will adequately protect  
3264 the proposed development and the landslide hazard area;

3265 C. Unless otherwise provided in K.C.C. 21A.24.045 or as a necessary part of an  
3266 allowed alteration, removal of any vegetation from a landslide hazard area or associated  
3267 buffer is prohibited;

3268 D. All alterations shall minimize disturbance to the landslide hazard area, slope,  
3269 and vegetation unless necessary for slope stabilization; ~~((and))~~

3270 E. Alterations ~~((in a landslide hazard area located on a slope less than forty~~  
3271 ~~percent are allowed if:~~

3272 1. ~~The proposed alteration will)) shall~~ not decrease slope stability on contiguous  
3273 properties; ~~((and~~

3274 2.)) F. The risk of property damage or injury resulting from landsliding ~~((is))~~  
3275 shall be eliminated or minimized;

3276 G. The risk of landsliding as a result of slope instability shall be considered to be  
3277 minimized where a slope stability analysis demonstrates the factor of safety to exceed 1.5  
3278 for static conditions and 1.1 for seismic conditions. Except when a more detailed  
3279 deformation analysis is conducted, seismicity shall be modeled as a horizontal force  
3280 equal to one half the peak ground acceleration adjusted for site class effects, or PGAm, as  
3281 given for the site in the International Building Code and American Society of Civil  
3282 Engineers 7 standard; and

3283 H. Alterations shall comply with the requirements and recommendations of the  
3284 geological critical area report.

3285 SECTION 69. K.C.C. 21A.24.310 is hereby recodified as a new section in  
3286 K.C.C. chapter 21A.24 to follow K.C.C. 21A.24.280.

3287            SECTION 70. Ordinance 10870, Section 478, as amended, and K.C.C.

3288    21A.24.310 are hereby amended to read as follows:

3289            The following development standards apply to development proposals and  
3290    alterations on sites containing steep slope hazard areas:

3291            A. ~~((Except as provided in subsection D. of this section, u))~~ Unless allowed as an  
3292    alteration exception under K.C.C. 21A.24.070, only the following alterations ~~((identified~~  
3293    ~~in K.C.C. 21A.24.045))~~ are allowed within a steep slope hazard area or associated  
3294    buffer((;)):

3295            1. Alterations identified in K.C.C. 21A.24.045;

3296            2. Alterations to steep slopes with a vertical elevation change of up to twenty  
3297    feet where no impact will result. The department may approve this exemption based on a  
3298    review of and concurrence with a geological critical area report; and

3299            3. Regrading of any slope that was created through previous legal grading  
3300    activities. Any slope that remains forty percent or steeper after alterations are completed  
3301    are subject to requirements for steep slope hazard areas.

3302            B. A buffer is required from all edges of the steep slope hazard area. To  
3303    eliminate or minimize the risk of property damage or injury resulting from slope  
3304    instability, landsliding, or erosion caused in whole or part by the development, the  
3305    department shall determine the size of the buffer based upon a geological critical area  
3306    report ~~((prepared by a geotechnical engineer or geologist. The department of local~~  
3307    ~~services shall adopt a public rule to implement this subsection, including implementing~~  
3308    ~~the requirements for development and review of a critical area report))~~.

3309 1. For new structures and substantial improvements to existing structures on  
3310 sites where any portion of the steep slope hazard area extends into the coastal high hazard  
3311 area or sea level rise risk area:

3312 a. The geological critical area report shall include an assessment of current and  
3313 future risks of sea level rise conditions anticipated to occur over the next fifty years and a  
3314 recommended buffer;

3315 b. If a geological critical area report is not submitted to the department, the  
3316 minimum buffer shall be seventy-five feet;

3317 2. For all other development not identified in subsection B.1. of this section:

3318 a. If a geological critical area report is not submitted to or required by the  
3319 department, the minimum buffer shall be fifty feet; and

3320 b. For ~~((building permits for))~~ alterations associated with single detached  
3321 dwelling units only, the department may waive the ~~((special study))~~ geological critical  
3322 area report requirement and authorize buffer reductions if the department determines that  
3323 the reduction will adequately protect the proposed development and the ~~((critical area))~~  
3324 steep slope hazard area;

3325 C. Unless otherwise provided in K.C.C. 21A.24.045 or as a necessary part of an  
3326 allowed alteration, removal of any vegetation from a steep slope hazard area or buffer is  
3327 prohibited; ~~((and))~~

3328 D. ~~((All alterations are allowed in the following circumstance:~~

3329 ~~1. Slopes which are forty percent or steeper with a vertical elevation change of~~  
3330 ~~up to twenty feet if no adverse impact will result from the exemption based on King~~

3331 County's review of and concurrence with a soils report prepared by a geologist or  
3332 geotechnical engineer; and  
3333 2. ~~The approved regrading of any slope which was created through previous~~  
3334 ~~legal grading activities. Any slope which remains forty percent or steeper following site~~  
3335 ~~development shall be subject to all requirements for steep slopes))~~ The risk of  
3336 landsliding as a result of slope instability shall be considered to be minimized where a  
3337 slope stability analysis demonstrates the factor of safety to exceed 1.5 for static  
3338 conditions and 1.1 for seismic conditions. Except when a more detailed deformation  
3339 analysis is conducted, seismicity shall be modeled as a horizontal force equal to one half  
3340 the peak ground acceleration adjusted for site class effects, or PGAm, as given for the site  
3341 in the International Building Code and American Society of Civil Engineers 7 standard;  
3342 and

3343 E. Alterations shall comply with the requirements and recommendations of the  
3344 geological critical area report.

3345 SECTION 71. Ordinance 10870, Section 476, as amended, and K.C.C.  
3346 21A.24.290 are hereby amended to read as follows:

3347 The following development standards apply to development proposals and  
3348 alterations on sites ~~((containing seismic hazard areas))~~ where potential seismic hazard  
3349 areas are mapped:

3350 A. The department may approve alterations ~~((to seismic hazard areas))~~ only if:

3351 1. The geological critical area report containing an evaluation of site-specific  
3352 subsurface conditions shows that the ~~((proposed))~~ development proposal site is not  
3353 ~~((located in))~~ a seismic hazard area; or

3354           2. The applicant implements appropriate engineering design based on the best  
3355 available engineering and geological practices that either eliminates or minimizes the risk  
3356 of structural damage or injury resulting from seismically induced settlement or soil  
3357 liquefaction; and

3358           B. The department may waive or reduce engineering study and design  
3359 requirements for alterations in seismic hazard areas for:

3360           1. ~~((Mobile))~~ Manufactured homes;

3361           2. Additions or alterations that do not increase occupancy or significantly affect  
3362 the risk of structural damage or injury; and

3363           3. One-story buildings with less than two-thousand-five hundred~~((s))~~ square feet  
3364 of floor area or roof area, whichever is greater, and that are not dwelling units or used as  
3365 places of employment or public assembly.

3366           NEW SECTION. SECTION 72. There is hereby added to K.C.C. chapter 21A.24  
3367 a new section to read as follows:

3368           The following development standards apply to development proposals and  
3369 alterations on sites containing alluvial fan hazard areas:

3370           A. Only the alterations identified in K.C.C. 21A.24.045 are allowed within  
3371 alluvial fan hazard areas;

3372           B. A buffer may be required from the edge of the alluvial fan hazard area. To  
3373 eliminate or minimize the risk of property damage or injury resulting from inundation,  
3374 sedimentation, or erosion caused in whole or part by the development, the department  
3375 shall determine the size of the buffer based upon a geological critical area report.

3376 C. A geological critical area report is required for alterations that are on an  
3377 alluvial fan or within fifty feet of an alluvial fan;

3378 D. Alterations shall minimize and not increase the risk of inundation,  
3379 sedimentation, channel migration, or erosion on adjacent properties;

3380 E. Unless otherwise provided in K.C.C. 21A.24.045 or as a necessary part of an  
3381 allowed alteration, removal of any vegetation from an alluvial fan hazard area or  
3382 associated buffer is prohibited;

3383 F. Alterations shall minimize disturbance to the alluvial fan hazard area, slope,  
3384 and vegetation unless necessary for slope stabilization; and

3385 G. The alteration shall not increase the frequency or magnitude of sediment  
3386 management activities or in-stream channel work that could impact fish habitat or  
3387 passage.

3388 NEW SECTION. SECTION 73. There is hereby added to K.C.C. chapter 21A.24  
3389 a new section to read as follows:

3390 A. This section applies to development proposals on sites that are within tsunami  
3391 hazard areas.

3392 B. New and substantially improved residential buildings within a tsunami hazard  
3393 area shall be designed to provide protection from inundation and debris impact according  
3394 to the projected hazard level. The projected hazard level shall be determined by the  
3395 county based on Washington state Department of Natural Resources tsunami inundation  
3396 maps, areas on the Flood Insurance Rate Maps indicated as Zones V1-V30, VE, or V, and  
3397 relevant requirements of the building code in K.C.C. Title 16.

3398 C. Except for buildings that support water-oriented uses, new buildings shall be  
3399 located on portions of the parcel or parcels under contiguous ownership that are not  
3400 within the tsunami hazard area, if feasible. If no portion of the parcel or parcels under  
3401 contiguous ownership are located outside the tsunami hazard area, or if the portion  
3402 outside the tsunami hazard area is not feasible for new building purposes, new buildings  
3403 shall be located as far from the tsunami hazard area as feasible.

3404 D. New critical facilities shall not be constructed in a tsunami hazard area if there  
3405 is a feasible alternative location outside the tsunami hazard area that would serve the  
3406 intended service area or service population. If allowed in the tsunami hazard area, the  
3407 critical facility shall be designed to minimize the risk and danger to the public health and  
3408 safety to the maximum extent practical, which may include, but is not limited to,  
3409 preparation of a tsunami evacuation plan.

3410 SECTION 74. K.C.C. 21A.24.205, as amended by this ordinance, is hereby  
3411 recodified as a new section in K.C.C. chapter 21A.24 to follow K.C.C. 21A.24.300.

3412 SECTION 75. Ordinance 15051, Section 158, and K.C.C. 21A.24.205 are hereby  
3413 amended to read as follows:

3414 Based upon a geological critical area report containing a coal mine hazard  
3415 assessment (~~((prepared in accordance with this chapter))~~), the department shall classify  
3416 coal mine hazard areas as follows:

3417 A. Declassified coal mine areas are those areas where the risk of catastrophic  
3418 collapse is not significant and that the hazard assessment report has determined do not  
3419 require special engineering or architectural recommendations to prevent significant risks  
3420 of property damage. Declassified coal mine areas typically include, but are not limited

3421 to, areas underlain or directly affected by coal mines at depths of more than three hundred  
3422 feet as measured from the surface;

3423 B. Moderate coal mine hazard areas are those areas that pose significant risks of  
3424 property damage that can be mitigated by implementing special engineering or  
3425 architectural recommendations. Moderate coal mine hazard areas typically include, but  
3426 are not limited to, areas underlain or directly affected by abandoned coal mine workings  
3427 from a depth of zero, which is the surface of the land, to three hundred feet or with  
3428 overburden-cover-to-seam thickness ratios of less than ten to one depending on the  
3429 inclination of the seam; and

3430 C. Severe coal mine hazard areas are those areas that pose a significant risk of  
3431 catastrophic ground surface collapse. Severe coal mine hazard areas typically include,  
3432 but are not limited to, areas characterized by unmitigated openings such as entries,  
3433 portals, adits, mine shafts, air shafts, timber shafts, sinkholes, improperly filled sinkholes,  
3434 and other areas of past or significant probability for catastrophic ground surface collapse;  
3435 or areas characterized by((;)) overland surfaces underlain or directly affected by  
3436 abandoned coal mine workings from a depth of zero, which is the surface of the land, to  
3437 one hundred fifty feet.

3438 SECTION 76. K.C.C. 21A.24.210 is hereby recodified as a new section in  
3439 K.C.C. chapter 21A.24 to follow K.C.C. 21A.24.205, as recodified by this ordinance.

3440 SECTION 77. K.C.C. 21A.24.220 is hereby recodified as a new section in  
3441 K.C.C. chapter 21A.24 to follow section that77, as recodified by this ordinance.

3442 SECTION 78. Ordinance 11481, Section 2, as amended, and K.C.C. 21A.24.311  
3443 are hereby amended to read as follows:

3444 The map entitled King County Critical Aquifer Recharge Areas, included in  
3445 Attachment H to Ordinance 17485, is hereby adopted as the designation of critical aquifer  
3446 recharge areas in King County in accordance with RCW 36.70A.170, as modified by  
3447 notices of map amendment in K.C.C. 21A.24.312.

3448 SECTION 79. Ordinance 15051, Section 173, as amended, and K.C.C.  
3449 21A.24.312 are hereby amended to read as follows:

3450 A. Upon application supported by a critical area((s)) report that includes a  
3451 hydrogeologic site evaluation, the department, in consultation with the department of  
3452 natural resources and parks, may determine that an area ((~~that is or is not classified as a~~))  
3453 on the critical aquifer recharge area ((~~on the~~)) map adopted under K.C.C. 21A.24.311:

3454 ((~~A.~~)) 1. Does not meet the criteria for a critical aquifer recharge area and  
3455 declassify that area if it is classified as a critical aquifer recharge area;

3456 ((~~B.~~)) 2. Has the wrong critical aquifer recharge area classification and determine  
3457 the correct classification; or

3458 ((~~C.~~)) 3. Has not been classified as a critical aquifer recharge area and should be  
3459 so classified based on the standards of K.C.C. 21A.24.313.

3460 B. Upon reclassification or declassification, a notice of map amendment for the  
3461 affected parcel or parcels shall be sent from the department of natural resources and parks  
3462 to the property owner, applicant, if applicable, and the county assessor.

3463 SECTION 80. Ordinance 15051, Section 174, as amended, and K.C.C.  
3464 21A.24.313 are hereby amended to read as follows:

3465 Critical aquifer recharge areas are categorized as follows:

3466 A. Category I critical aquifer recharge areas include those mapped areas that  
3467 King County has determined ~~((are))~~:

3468 1. Are ~~((H))~~ highly susceptible to groundwater contamination and that are  
3469 located within a sole source aquifer or a wellhead protection area; or

3470 2. Are ~~((I))~~ in an area where hydrogeologic mapping or a numerical flow  
3471 transport model in a Washington department of health approved wellhead protection plan  
3472 demonstrate that the area is within the one-year time of travel to a wellhead for a Group  
3473 A water system;

3474 B. Category II critical aquifer recharge areas include those mapped areas that  
3475 King County has determined:

3476 1. Have a medium susceptibility to ground~~((-))~~water contamination and are  
3477 located in a sole source aquifer or a wellhead protection area; or

3478 2. Are highly susceptible to groundwater contamination and are not located in a  
3479 sole source aquifer or wellhead protection area; and

3480 C. Category III critical aquifer recharge areas include those mapped areas that  
3481 King County has determined have low susceptibility to groundwater contamination and  
3482 are located over an aquifer underlying ~~((an island that is surrounded by saltwater))~~  
3483 Vashon-Maury Island.

3484 SECTION 81. Ordinance 15051, Section 179, as amended, and K.C.C.  
3485 21A.24.316 are hereby amended to read as follows:

3486 The following development standards apply to development proposals and  
3487 alterations on sites containing critical aquifer recharge areas:

3488           A. Except as otherwise provided in subsection H. of this section, the following  
3489 new development proposals and alterations are not allowed on a site located in a category  
3490 I critical aquifer recharge area:

- 3491           1. Transmission pipelines carrying petroleum or petroleum products;
- 3492           2. Sand and gravel, and hard rock mining unless:
  - 3493               a. the site has mineral zoning as of January 1, 2005; or
  - 3494               b. ~~((mining))~~ mineral extraction is an ~~((permitted))~~ allowed use on the site and
- 3495           the critical aquifer recharge area was mapped after the date a complete application for
- 3496           mineral extraction on the site was filed with the department;
- 3497           3. ~~((Mining of any type))~~ Mineral extraction below the upper surface of the
- 3498           saturated ground~~((--))~~water that could be used for potable water supply;
- 3499           4. Disposal of radioactive wastes, as defined in chapter 43.200 RCW;
- 3500           5. Hydrocarbon extraction;
- 3501           6. Commercial wood treatment facilities on permeable surfaces;
- 3502           7. Underground storage tanks, including tanks that are exempt from the
- 3503           requirements of chapter 173-360A WAC, with hazardous substances, as defined in
- 3504           chapter ~~((70.105))~~ 70A.300 RCW, that do not comply with standards of chapter 173-
- 3505           360A WAC and K.C.C. Title 17;
- 3506           8. Above~~((--))~~ground storage tanks for hazardous substances, as defined in
- 3507           chapter ~~((70.105))~~ 70A.300 RCW, unless protected with primary and secondary
- 3508           containment areas and a spill protection plan;
- 3509           9. Golf courses;
- 3510           10. Cemeteries;

3511 11. Wrecking yards;

3512 12. Landfills for hazardous waste, municipal solid waste, or special waste, as

3513 defined in K.C.C. chapter 10.04; and

3514 13. On lots smaller than one acre, an on-site septic system, unless:

3515 a. the system is approved by the Washington state Department of Health and

3516 has been listed by the Washington ~~((S))~~state Department of Health as meeting treatment

3517 standard N as provided in ~~((WAC))~~ chapter 426-272A WAC; or

3518 b. ~~((the Seattle-King County department of))~~ public health - Seattle & King

3519 County determines that the systems required under subsection A.13.a. of this section will

3520 not function on the site.

3521 B. Except as otherwise provided in subsection H. of this section, the following

3522 new development proposals and alterations are not allowed on a site located in a category

3523 II critical aquifer recharge area:

3524 1. Mining of any type below the upper surface of the saturated ground~~((-))~~water

3525 that could be used for potable water supply;

3526 2. Disposal of radioactive wastes, as defined in chapter 43.200 RCW;

3527 3. Hydrocarbon extraction;

3528 4. Commercial wood treatment facilities located on permeable surfaces;

3529 5.a. Underground storage tanks with hazardous substances, as defined in chapter

3530 70A.300 RCW, that do not comply with requirements of chapter 173-360A WAC and

3531 K.C.C. Title 17, ~~((E))~~except for a category II critical aquifer recharge area located over

3532 an aquifer underlying ~~((an island that is surrounded by saltwater, underground storage~~

3533 ~~tanks with hazardous substances, as defined in chapter 70.105 RCW, that do not meet the~~  
3534 ~~requirements of chapter 173-360 WAC and K.C.C. Title 17))~~ Vashon-Maury Island; and

3535           b. For a category II critical aquifer recharge area located over an aquifer  
3536 underlying ~~((an island that is surrounded by saltwater))~~ Vashon-Maury Island,  
3537 underground storage tanks, including underground storage tanks exempt from the  
3538 requirements of chapter 173-360A WAC, with hazardous substances, as defined in  
3539 chapter ~~((70.105))~~ 70A.300 RCW, that do not comply with the standards in chapter 173-  
3540 360A WAC and K.C.C. Title 17;

3541           6. Above~~(( ))~~ground storage tanks for hazardous substances, as defined in  
3542 chapter ~~((70.105))~~ 70A.300 RCW, unless protected with primary and secondary  
3543 containment areas and a spill protection plan;

3544           7. Wrecking yards;

3545           8. Landfills for hazardous waste, municipal solid waste, or special waste, as  
3546 defined in K.C.C. chapter 10.04; and

3547           9. On lots smaller than one acre, an on-site septic systems, unless:

3548           a. the system is approved by the Washington state Department of Health and  
3549 has been listed by the Washington state Department of Health as meeting treatment  
3550 standard N as provided in ~~((WAC))~~ chapter 426-272A WAC; or

3551           b. ~~((the Seattle-King County department of))~~ public health - Seattle & King  
3552 County determines that the systems required under subsection B.9.a. of this section will  
3553 not function on the site.

3554 C. Except as otherwise provided in subsection H. of this section, the following  
3555 new development proposals and alterations are not allowed on a site located in a category  
3556 III critical aquifer recharge area:

- 3557 1. Disposal of radioactive wastes, as defined in chapter ~~((43-200))~~ 70A.384  
3558 RCW;
- 3559 2. Hydrocarbon extraction;
- 3560 3. Commercial wood treatment facilities located on permeable surfaces;
- 3561 4. Underground storage tanks, including tanks exempt from the requirements of  
3562 chapter 173-360A WAC, with hazardous substances, as defined in chapter ~~((70-105))~~  
3563 70A.300 RCW, that do not comply with the requirements of chapter 173-360A WAC and  
3564 K.C.C. Title 17;
- 3565 5. Above ground storage tanks for hazardous substances, as defined in chapter  
3566 ~~((70-105))~~ 70A.300 RCW, unless protected with primary and secondary containment  
3567 areas and a spill protection plan;
- 3568 6. Wrecking yards; and
- 3569 7. Landfills for hazardous waste, municipal solid waste, or special waste, as  
3570 defined in K.C.C. chapter 10.04.

3571 D. The following standards apply to development proposals and alterations that  
3572 are substantial improvements on a site located in a critical aquifer recharge area:

- 3573 1. The owner of an underground storage tank, including a tank that is exempt  
3574 from the requirements of chapter 173-360A WAC, in a category I or III critical aquifer  
3575 recharge area or a category II critical aquifer recharge area located over an aquifer  
3576 underlying Vashon-Maury Island shall either bring the tank into compliance with the

3577 standards of chapter 173-360A WAC and K.C.C. Title 17 or properly decommission or  
3578 remove the tank; and

3579           2. The owner of an underground storage tank in a category II critical aquifer  
3580 recharge area not located on located over an aquifer underlying Vashon-Maury Island  
3581 shall bring the tank into compliance with the standards of chapter 173-360A WAC and  
3582 K.C.C. Title 17 or shall properly decommission or remove the tank.

3583           E. In any critical aquifer recharge area, the property owner shall properly  
3584 decommission an abandoned well.

3585           F. On a site located in a critical aquifer recharge area within ~~((#))~~Urban  
3586 ~~((g))~~Growth ~~((a))~~Area, a development proposal for new residential development,  
3587 including, but not limited to, a subdivision, short subdivision, or dwelling unit, shall  
3588 incorporate best management practices included in the ~~((King County))~~ Surface Water  
3589 Design Manual into the site design in order to infiltrate stormwater runoff to the  
3590 maximum extent practical.

3591           G. For critical aquifer recharge areas on Vashon-Maury Island:

3592           1. No new groundwater wells are ~~((permitted))~~ allowed within a coastal high  
3593 hazard area. A rainwater catchment system may be used as an alternative water supply  
3594 source for a single ~~((family))~~ detached residence if the requirements of ~~((K.C.C.))~~ King  
3595 County Board of Health Code BOH 13.04.070 are met;

3596           2. All new groundwater wells within a sea level rise risk area shall include a  
3597 surface seal that prevents risks of saltwater contamination caused by sea level rise  
3598 conditions anticipated to occur over the next fifty years; and

3599           3.a. The owner of a new well located within the sea level rise risk area shall test  
3600 the well for chloride levels using testing protocols approved by the Washington state  
3601 Department of Health.

3602           b. The owner shall report the results of the test to ~~((Seattle King County~~  
3603 ~~department of))~~ public health – Seattle & King County and to the department of natural  
3604 resources and parks.

3605           c. If the test results indicate saltwater intrusion is likely to occur, the  
3606 department of natural resources and parks, in consultation with ~~((Seattle King County~~  
3607 ~~department of))~~ public health – Seattle & King County, shall recommend appropriate  
3608 measures.

3609           d. The owner shall implement all recommended measures in addition to the  
3610 minimum requirements of this title to prevent saltwater intrusion

3611           H. On a site greater than twenty acres, the department may approve a  
3612 development proposal otherwise prohibited by subsections A., B., and C. of this section if  
3613 the applicant demonstrates through a critical area report that the development proposal is  
3614 located outside the critical aquifer recharge area and that the development proposal will  
3615 not cause an ~~((significant))~~ adverse ~~((environmental))~~ impact to the critical aquifer  
3616 recharge area.

3617           I. The provisions relating to underground storage tanks in subsections A. through  
3618 D. of this section apply only when the proposed regulation of underground storage tanks  
3619 has been submitted to and approved by the Washington state ~~((d))~~Department of  
3620 ~~((e))~~Ecology, in accordance with ~~((90.76.040))~~ RCW 70A.355.030 and WAC ~~((173-360-~~  
3621 ~~530))~~ 173-360A-0130.

3622            SECTION 82. Ordinance 15051, Section 183, as amended, and K.C.C.

3623    21A.24.318 are hereby amended to read as follows:

3624            A. Identification of wetlands and delineation of their boundaries shall be done in

3625    accordance with the approved federal wetland delineation manual and applicable regional

3626    supplement as set forth in WAC 173-22-035.

3627            B. Wetlands shall be rated into category I, category II, category III, and category

3628    IV based on the adopted Washington State Wetland Rating System for Western

3629    Washington, Washington state Department of Ecology publication number ((14-06-029))

3630    23-06-009, published October 2014 and updated July 2023.

3631            C. Wetland rating categories shall not recognize illegal modifications.

3632            SECTION 83. Ordinance 15051, Section 185, as amended, and K.C.C.

3633    21A.24.325 are hereby amended to read as follows:

3634            A. Except as otherwise provided in this section, buffers shall be provided from

3635    the wetland edge as follows:

3636            1. The buffers shown on the following table apply unless modified in

3637    accordance with subsections B., C., D., and E. of this section:

| WETLAND CATEGORY AND<br>CHARACTERISTICS | INTENSITY OF IMPACT OF<br>ADJACENT LAND USE |                            |                            |
|-----------------------------------------|---------------------------------------------|----------------------------|----------------------------|
|                                         | HIGH<br>IMPACT                              | MODERATE<br>IMPACT         | LOW<br>IMPACT              |
| <b>Category I</b>                       |                                             |                            |                            |
| Wetlands of High Conservation Value     | ((250))<br><u>300</u> feet                  | ((190)) <u>225</u><br>feet | ((125))<br><u>150</u> feet |

|                                                                  |                                                                                          |                                       |                                       |
|------------------------------------------------------------------|------------------------------------------------------------------------------------------|---------------------------------------|---------------------------------------|
| Bog                                                              | <del>((250))</del><br><u>300</u> feet                                                    | <del>((190))</del> <u>225</u><br>feet | <del>((125))</del><br><u>150</u> feet |
| Estuarine                                                        | <del>((200))</del><br><u>300</u> feet                                                    | <del>((150))</del> <u>225</u><br>feet | <del>((100))</del><br><u>150</u> feet |

| Forested                                                         | Buffer width to be based on score for<br>habitat functions or water quality<br>functions |                                       |                                       |
| Habitat score from 8 to 9 points (high level<br>of function)     | 300 feet                                                                                 | 225 feet                              | 150 feet                              |
| Habitat score from 6 to 7 points (moderate<br>level of function) | 150 feet                                                                                 | 110 feet                              | 75 feet                               |
| Category I wetlands not meeting any of the<br>criteria above     | 100 feet                                                                                 | 75 feet                               | 50 feet                               |
| <b>Category II</b>                                               |                                                                                          |                                       |                                       |
| Estuarine                                                        | 150 feet                                                                                 | 110 feet                              | 75 feet                               |
| Habitat score from 8 to 9 points (high level<br>of function)     | 300 feet                                                                                 | 225 feet                              | 150 feet                              |
| Habitat score from 6 to 7 points (moderate<br>level of function) | 150 feet                                                                                 | 110 feet                              | 75 feet                               |
| Category II wetlands not meeting any of the<br>criteria above    | 100 feet                                                                                 | 75 feet                               | 50 feet                               |

|                                                               |                                  |                                  |                                  |
|---------------------------------------------------------------|----------------------------------|----------------------------------|----------------------------------|
| <b>Category III</b>                                           |                                  |                                  |                                  |
| Habitat score from 8 to 9 points (high level of function)     | 300 feet                         | 225 feet                         | 150 feet                         |
| Habitat score from 6 to 7 points (moderate level of function) | 150 feet                         | 110 feet                         | 75 feet                          |
| Category III wetlands not meeting any of the criteria above   | 80 feet                          | 60 feet                          | 40 feet                          |
| <b>Category IV</b>                                            | <del>((50))</del> <u>60</u> feet | <del>((40))</del> <u>45</u> feet | <del>((25))</del> <u>35</u> feet |

3638 2. For purposes of this subsection A., unless the director determines a lesser  
3639 level of impact is appropriate based on information provided by the applicant, the  
3640 intensity of impact of the adjacent land use is determined as follows:

3641 a. High impact includes:

3642 (1) sites zoned commercial or industrial;

3643 (2) commercial, institutional, or industrial use on a site regardless of the  
3644 zoning classification;

3645 (3) nonresidential use on a site zoned ~~((for residential use))~~ RA, UR, or R,  
3646 such as telecommunication towers and associated equipment;

3647 (4) high-intensity active recreation use on a site regardless of zoning, such as  
3648 golf courses, ~~((ball))~~ sports fields, and similar use;

3649 (5) all sites within the Urban Growth Area, except recreational uses in  
3650 subsection A.2.b.(6) and A.2.c.(2) of this section; ~~((or))~~

3651 (6) Residential zoning greater than one dwelling unit per acre;

3652                    (7) railroads; or

3653                    (8) federal and state highways, including on-ramps and exits, state routes, and

3654 other roads associated with high impact land uses;

3655                    b. Moderate impact includes:

3656                    (1) residential uses on sites zoned residential one dwelling unit per acre or

3657 less;

3658                    (2) residential use on a site zoned ~~((rural area, agriculture or forestry))~~ RA, A,

3659 or F;

3660                    (3) agricultural uses without an approved farm management plan;

3661                    (4) forest service roads and roads associated with moderate impact land uses;

3662                    (5) utility corridors or right-of-way shared by several utilities, including

3663 maintenance roads; or

3664                    ~~(((5)))~~ (6) moderate-intensity active recreation or open space use, such as

3665 paved trails, parks with biking, jogging, and similar use; and

3666                    c. Low impact includes:

3667                    (1) forestry uses on a site regardless of zoning classification;

3668                    (2) passive recreation uses, such as unpaved trails, nature viewing areas,

3669 fishing and camping areas, and other similar uses that do not require permanent

3670 structures~~((;))~~ on a site regardless of zoning;

3671                    (3) agricultural uses carried out in accordance with an approved farm

3672 management plan and in accordance with K.C.C. 21A.24.045~~((.D.53. and K.C.C.~~

3673 ~~21A.24.045.D.54.))~~; or

3674 (4) utility corridors without a maintenance road and little or no vegetation  
3675 maintenance.

3676 B. ~~((The department may approve a modification of the minimum))~~ Wetland  
3677 buffer width ~~((required by this section by averaging the buffer width))~~ averaging may be  
3678 allowed if an ecological critical area report demonstrates:

3679 1.a. ~~((The department determines that:~~  
3680 ~~a. the b))~~ Buffer averaging will improve wetland protection if the wetland has  
3681 significant differences in characteristics that effect habitat functions, such as a wetland  
3682 with a forested component adjacent to a degraded emergent component or a (("))dual-  
3683 rated((")) wetland with a Category I area adjacent to a lower-rated area; or

3684 b. averaging includes the corridors of a wetland complex; ~~((and~~

3685 2. ~~The resulting buffer meets the following standards:~~

3686 a.) 2. ((t))The total area of the buffer after averaging is ((equivalent)) equal to  
3687 or greater than the area of the buffer before averaging;

3688 ~~((b.))~~ 3. ((t))The additional buffer is contiguous with the standard buffer;

3689 ~~((e.))~~ 4. ((t))The buffer at its narrowest point is ((never)) no less than ((either))  
3690 seventy-five percent of the required width ((or seventy five feet for Category I and II,

3691 fifty feet for Category III, and twenty five feet for Category IV, whichever is greater));

3692 ~~((d. the averaged buffer will not result in degradation of wetland functions and~~  
3693 ~~values as demonstrated by critical area report from a qualified wetland professional; and))~~

3694 5. No net loss of wetland functions and values shall occur as a result of buffer averaging.

3695 Revegetation consistent with section 63 of this ordinance shall be installed in the buffer  
3696 where native vegetation does not currently exist;

3697           ~~((e-))~~ 6. ((t))The buffer is increased adjacent to the higher functioning ~~((area~~  
3698   ~~of))~~ habitat or more sensitive portion of the wetland and decreased adjacent to the lower-  
3699   functioning or less-sensitive portion ~~((as demonstrated by a critical area report from a~~  
3700   ~~qualified wetland professional))~~;

3701           7. Buffer averaging is not combined with other buffer reductions or  
3702   modifications; and

3703           8. Indirect impacts are assessed and mitigated.

3704           C. Wetland buffer widths shall also be subject to modifications under the  
3705   following special circumstances:

3706           1. For wetlands containing documented habitat for endangered, threatened, or  
3707   species of local importance, the following shall apply:

3708           a. the department shall establish the appropriate buffer, based on a habitat  
3709   assessment, to ensure that the buffer provides adequate protection for the sensitive  
3710   species; and

3711           b. the department may apply the buffer reduction rules in subsection C.~~((6))~~5.  
3712   of this section ~~((and))~~ or the buffer averaging rules in subsection B. of this section~~((;))~~.

3713           2. For a wetland buffer that includes a steep slope hazard area or landslide  
3714   hazard area, the ~~((buffer))~~ width ~~((is))~~ shall be the greater of:

3715           a. the wetland buffer width ~~((required by the wetland's category in this~~  
3716   ~~section))~~; or

3717           b. the wetland buffer width, extended upslope towards the top of the landslide  
3718   or steep slope hazard area, as measured perpendicular to topographic contours, up to a  
3719   maximum total width of twice the wetland buffer width otherwise required;

3720 3. For a wetland complex (~~((located outside the Urban Growth Area established~~  
3721 ~~by the King County Comprehensive Plan or located within the Urban Growth Area in a~~  
3722 ~~basin designated as "high" on the Basin and Shoreline Conditions Map, which is included~~  
3723 ~~as Attachment A to Ordinance 15051))), the buffer widths ~~((is determined))~~ are as follows:~~

3724 a. ~~((§))~~The buffer width for each individual wetland ~~((in the complex is the~~  
3725 ~~same width as the buffer width required for the category of wetland))~~ shall be consistent  
3726 with subsection A. of this section;

3727 b. ~~((§))~~If the buffer of a wetland within the complex does not touch or overlap  
3728 with at least one other wetland buffer in the complex, a corridor is required from the  
3729 buffer of that wetland to one other wetland buffer in the complex considering the  
3730 following factors:

3731 (1) the corridor is designed to support maintaining viable wildlife species that  
3732 are commonly recognized to exclusively or partially use wetlands and wetland buffers  
3733 during a critical life cycle stage, such as breeding, rearing, or feeding;

3734 (2) the corridor minimizes fragmentation of the wetlands;

3735 (3) higher category wetlands are connected through corridors before lower  
3736 category wetlands; and

3737 (4) the corridor width is at least twenty-five percent of the length of the  
3738 corridor, but no less than twenty-five feet in width; and

3739 (5) shorter corridors are preferred over longer corridors;

3740 c. ~~((¶))~~Wetlands in a complex that are connected by an aquatic area that flows  
3741 between the wetlands are not required to be connected through a corridor;

3742 d. ~~((†))~~The department may exclude a wetland from the wetland complex if the  
3743 applicant demonstrates that the wetland is unlikely to provide habitat for wildlife species  
3744 that are commonly recognized to exclusively or partially use wetlands and wetland  
3745 buffers during a critical life cycle stage, such as breeding, rearing, or feeding; and

3746 e. ~~((†))~~The alterations allowed in a wetland buffer in K.C.C. 21A.24.045 are  
3747 allowed in corridors subject to the same conditions and requirements ~~((as wetland buffers~~  
3748 ~~as long as))~~ if the alteration is designed so as not to disrupt wildlife movement through  
3749 the corridor;

3750 4. Where a legally established public roadway transects a wetland buffer, the  
3751 department may approve a modification of the ~~((minimum))~~ required buffer width to the  
3752 edge of the roadway if:

3753 a. the part of the buffer on the other side of the roadway sought to be reduced:  
3754 ~~((a-))~~ (1) does not provide additional protection of ~~((the proposed development~~  
3755 ~~or the))~~ wetland functions and values from the proposed alteration; and

3756 ~~((b-))~~ (2) provides insignificant biological, geological, or hydrological buffer  
3757 functions relating to the other portion of the buffer adjacent to the wetland; and

3758 b. the applicant provides a written evaluation that includes:

3759 (1) a description of the vegetative composition, hydrologic regime,  
3760 topography, and development on both sides of the roadway;

3761 (2) an assessment of the functions that the buffer provides on the other side of  
3762 the roadway for wildlife habitat, water quality, and water quantity; and

3763                   (3) an analysis of how the roadway fully disconnects the buffer from  
3764 providing the assessed functions, and whether the disconnection affects the entirety of the  
3765 buffer; and

3766                   5. ~~((If the site has an approved rural stewardship plan under K.C.C. 21A.24.055,~~  
3767 ~~the buffer widths shall be established under the rural stewardship plan and shall not~~  
3768 ~~exceed the standard for a low impact land use, unless the department determines that a~~  
3769 ~~larger buffer is necessary to achieve no net loss of wetland ecological function; and~~

3770                   6. ~~The buffer widths required for proposed land uses with~~) For developments  
3771 with residential uses, mixed-use, daycares, and social services within the Urban Growth  
3772 Area that are categorized as high intensity impacts to wetlands, the buffer widths can be  
3773 reduced to those required for moderate ((intensity)) impacts ((under the following  
3774 conditions)) if:

3775                   a. all the following measures to minimize impacts of the proposed land uses  
3776 are applied:

3777                   (1) revegetate with dense native vegetation or climate-adaptive plants along  
3778 the edge of the buffer and in any other portion of the buffer wherever existing vegetation  
3779 is sparse;

3780                   (2) install wildlife lighting and direct all light away from the wetland;

3781                   (3) locate noise-generating activities away from the wetland;

3782                   (4) install wildlife passable fencing at the edge of the wetland buffer;

3783                   (5) attach critical area signs to wildlife passable fencing every fifty to  
3784 seventy-five linear feet, as determined by the department, so that a sign is visible from  
3785 any point along the edge of the critical area or buffer;

3786                    (6) submit an integrated pest and weed management plan that prohibits the  
3787 use of pesticides, herbicides, and fungicides in the wetland or associated buffer; and  
3788                    (7) demonstrate how each of the following meets the core requirements in the  
3789 Surface Water Design Manual, including:  
3790                    (a) stormwater runoff;  
3791                    (b) change in water regime; and  
3792                    (c) erosion and dust control; and  
3793                    b. ((F))for wetlands that score moderate or high for habitat functions((, which  
3794 means six points or higher, the width of the buffer can be reduced if both of the following  
3795 criteria are met:  
3796                    ((1) A))a relatively undisturbed vegetated corridor at least one-hundred feet  
3797 wide is protected between the wetland and ((any other Priority Habitats as defined by the  
3798 Washington state Department of Fish and Wildlife in the priority habitat and species list))  
3799 a legally-protected, relatively undisturbed and vegetated area. The corridor ((must)) shall  
3800 be protected for the entire distance ((between the wetland and the priority habitat)) and  
3801 ((legally)) recorded via a conservation easement; and  
3802                    ((2) Measures to minimize the impacts of different land uses on wetlands as  
3803 identified in subsection C.6.b. of this section are applied; and  
3804                    b. For wetlands that score low for habitat, which means less than six points, the  
3805 buffer width can be reduced to that required for moderate intensity impacts by applying  
3806 measures to minimize impacts of the proposed land uses, as follows:

| <b>Disturbance</b> | <b>Measures to minimize impacts</b> |
|--------------------|-------------------------------------|
| Lights             | Direct lights away from wetland.    |

|                            |                                                                                                                                                                                                                                                                                                                                                                                                        |
|----------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Noise                      | Locate activity that generates noise away from wetland. If warranted, enhance existing buffer with native vegetation plantings adjacent to noise source. For activities that generate relatively continuous, potentially disruptive noise, such as certain heavy industry or mining, establish an additional ten-foot heavily vegetated buffer strip immediately adjacent to the outer wetland buffer. |
| Toxic runoff               | Route all new untreated runoff away from wetland while ensuring wetland is not dewatered. Establish covenants limiting use of pesticides within 150 feet of wetland. Apply integrated pest management.                                                                                                                                                                                                 |
| Stormwater runoff          | Retrofit stormwater detention and treatment for roads and existing adjacent development. Prevent channelized flow from lawns that directly enters the buffer. Use low impact intensity development techniques identified in the King County Surface Water Design Manual.                                                                                                                               |
| Change in water regime     | Infiltrate or treat, detain and disperse into buffer new runoff from impervious surfaces and new lawns.                                                                                                                                                                                                                                                                                                |
| Pets and human disturbance | Use privacy fencing or plant dense vegetation to delineate buffer edge and to discourage disturbance using vegetation appropriate for the ecoregion. Place wetland and its buffer in a separate tract or protect with a conservation easement.                                                                                                                                                         |
| Dust                       | Use best management practices to control dust.))                                                                                                                                                                                                                                                                                                                                                       |

3807                    c. the development proposal does not impact the reduced buffer.

3808                    D. The department may approve a modification to the buffers established in  
3809 subsection A. of this section if the wetland was created or its characterization was  
3810 upgraded as part of a voluntary enhancement or restoration project.

3811                    E. If the site is located within the shoreline jurisdiction, the department shall  
3812 determine that a proposal to reduce wetland buffers under this section will result in no net  
3813 loss of shoreline ecological functions or wetland functions and values.

3814                    SECTION 84. Ordinance 15051, Section 187, as amended, and K.C.C.  
3815 21A.24.335 are hereby amended to read as follows:

3816                    The following development standards apply to development proposals and  
3817 alterations on sites containing wetlands or ~~((their))~~ associated buffers:

3818                    A. Unless allowed as an alteration exception under K.C.C. 21A.24.070, only the  
3819 alterations identified in K.C.C. 21A.24.045 are allowed in wetlands and wetland buffers;

3820                    B. ~~((The a))~~ Applicants may include climate-adaptive plants that have been  
3821 approved by King County in mitigation or restoration projects, but shall not otherwise  
3822 introduce any plant or wildlife that is not indigenous to the Puget Sound ~~((lowland))~~  
3823 region into any wetland or wetland buffer unless authorized by a state or federal permit or  
3824 approval; and

3825                    C. ~~((A category IV wetland less than two thousand five hundred square feet that~~  
3826 ~~is not part of a wetland complex may be altered in accordance with an approved~~  
3827 ~~mitigation plan by relocating the wetland into a new wetland, with equivalent or greater~~  
3828 ~~functions, or into an existing wetland at the ratios specified in K.C.C. 21A.24.340 based~~  
3829 ~~on the type of mitigation measures proposed; and~~

3830 D.)) Alterations to category I wetlands containing bogs or fens are limited to  
3831 K.C.C. 21A.24.045, D.20. and D.((52))51.

3832 SECTION 85. Ordinance 10870, Section 481, as amended, and K.C.C.  
3833 21A.24.340 are hereby amended to read as follows:

3834 In addition to the requirements in ((K.C.C. 21A.24.125 and 21A.24.130)) this  
3835 chapter, the following applies to wetland and wetland buffer mitigation ((to compensate  
3836 for the adverse impacts associated with an alteration to a wetland or wetland buffer)):

3837 A. Mitigation measures ((must)) shall achieve ((equivalent or greater)) equal or  
3838 better wetland functions and values, including, but not limited to:

3839 1. Habitat functions such as complexity, connectivity, and other biological and  
3840 ecological functions; and

3841 2. Hydrological functions, such as ((S))seasonal hydrological dynamics, as  
3842 provided in the ((King County)) Surface Water Design Manual;

3843 B. For permanent impacts to a wetland or wetland buffer, ((F))the following  
3844 ratios of ((area of)) mitigation area to ((area of alteration)) impact area apply ((to  
3845 mitigation measures for permanent alterations)):

3846 1. For ((alterations)) impacts to a wetland buffer, a ratio of ((one to one; and))  
3847 1:1 on-site, and 2:1 off-site;

3848 2. For ((alterations)) direct impacts to a wetland that result in permanent, direct  
3849 loss of wetland area:

3859 D. The department may increase the mitigation ratios provided in subsections B.

3860 and C. of this section under the following circumstances:

3861 1. The department determines there is uncertainty as to the probable success of

3862 the proposed restoration or creation;

3863 2. A significant period of time will elapse between the impact caused by the

3864 development proposal and the establishment of wetland functions at the mitigation site;

3865 3. The proposed mitigation will result in a lower category wetland or reduced

3866 functions relative to the wetland being impacted; (~~(or)~~)

3867           4. The proposed mitigation site is not within the same 10-digit hydrologic unit,  
3868 as defined in the Federal Standards and Procedures for the National Watershed Boundary  
3869 Dataset: United States Geological Survey, 2022, as the impact;

3870           5. The proposed mitigation site differs from the development proposal site in  
3871 hydrogeomorphic class, Cowardin system or class, or other fundamental habitat  
3872 characteristics;

3873           6. The development proposal site contains documented habitat for federal or  
3874 state listed endangered, threatened, sensitive, or candidate species or King County species  
3875 of local importance; or

3876           7. The alteration causing the impact was ((an)) unauthorized ((impact)).

3877           E. ~~((The department may decrease the mitigation ratios provided in subsections~~  
3878 ~~B. and C. of this section under the following circumstances))~~ Wetland mitigation bank or  
3879 in lieu fee program credits may be approved as off-site compensatory mitigation under  
3880 K.C.C. 21A.24.133. Instead of mitigation ratios in subsection B. or C. of this subsection,  
3881 wetland mitigation bank or in lieu fee program mitigation ratios are as follows:

3882           1. ~~((The applicant demonstrates by documentation submitted by a qualified~~  
3883 ~~wetland specialist that the proposed mitigation actions have a very high likelihood of~~  
3884 ~~success based on hydrologic data and prior experience;~~

3885           2. ~~The applicant demonstrates by documentation by a qualified wetland~~  
3886 ~~specialist that the proposed actions for compensation will provide functions and values~~  
3887 ~~that are significantly greater than the wetland being impacted;~~

3. ~~The applicant demonstrates that the proposed actions for mitigation have been conducted in advance of the impact caused by the development proposal and that the actions are successful; or~~

4. ~~In wetlands where several wetland hydrogeomorphic classes, including, but not limited to depression, slope, riverine and flow through, are found within one delineated boundary, the department may decrease the ratios if:~~

a. ~~impacts to the wetland are all within an area that has a different hydrogeomorphic class from the one used to establish the category;~~

b. ~~the category of the area with a different class is lower than that of the entire wetland; and~~

c. ~~the applicant provides adequate hydrologic and geomorphic data to establish that the boundary between the hydrogeomorphic classes lies outside of the footprint of the impacts.))~~ For wetland mitigation banks certified under Chapter 173-700 WAC, the amount of compensatory mitigation required shall be as follows:

a. For direct impacts to wetlands and wetland buffers, the ratio shall be consistent with the approved mitigation banking instrument, with a minimum bank credit to impact acre ratio of 1:1;

b. For indirect wetland impacts, the ratio shall be one-half of the ratio recommended in the approved mitigation banking instrument; and

c. For long-term temporary impacts, the ratio shall be one-quarter of the ratio recommended in the approved mitigation banking instrument;

2. For use of the King County mitigation reserves program or a state or federally authorized in lieu fee program:

3911           a. For direct, indirect, and long-term temporary impacts, the amount of  
3912 compensatory mitigation required shall be consistent with the in lieu fee program  
3913 instrument and result in no net loss of wetland functions and values; and

3914           b. For impacts to wetland buffers, the ratio shall be 1:1; and

3915           3. Compensatory mitigation for other approved off-site mitigation options shall  
3916 be consistent with ratios in subsections B., C., and D. of this section.

3917           F. For temporary ~~((alterations))~~ impacts to a wetland or its buffer that are  
3918 predominately woody vegetation, the department may require mitigation in addition to  
3919 restoration of the ~~((altered))~~ wetland or wetland buffer; and

3920           G. Mitigation of ~~((an alteration to a buffer of a))~~ wetland buffers ~~((that occurs~~  
3921 ~~along an aquatic area))~~ in a lake shoreline ~~((in accordance with an allowed alteration~~  
3922 ~~under this chapter))~~ shall include, but is not limited to, on-site revegetation, maintenance,  
3923 and other restoration of the buffer or setback area to the maximum extent practical.

3924           SECTION 86. Ordinance 15051, Section 192, as amended, and K.C.C.  
3925 21A.24.355 are hereby amended to read as follows:

3926           A. Aquatic areas are ~~((categorized or -))~~typed~~((as follows))~~ using the water  
3927 typing system in WAC 222-16-030 and the following criteria:

3928           1. Type S ~~((waters include))~~ means all aquatic areas, within their bankfull width,  
3929 inventoried as ~~(( ))~~shorelines of the state~~(( ))~~ under King County's ~~((S))~~shoreline  
3930 ~~((M))~~master ~~((P))~~program;~~((K.C.C. chapter 21A.25, in accordance with chapter 90.58~~  
3931 ~~RCW))~~ including periodically inundated areas of their associated wetlands;

3932           2. Type F ~~((waters include all))~~ means segments of aquatic areas ~~((that are not))~~  
3933 other than type S ~~((waters))~~, which are within the bankfull widths of defined channels and

3934 periodically inundated areas of their associated wetlands, or within lakes, ponds, or  
3935 impoundments having a surface area of one-half acre or greater at seasonal low water and  
3936 that contain fish or fish habitat ((-including)) or are described by one of the following  
3937 categories:

3938       a. waters diverted for domestic use by more than ten residential or camping  
3939 units or by a public accommodation facility licensed to serve more than ten persons,  
3940 where such diversion is determined by the department to be a valid appropriation of water  
3941 and the only practical water source for such users. Such waters shall be considered to be  
3942 Type F upstream from the point of such diversion for one-thousand-five-hundred feet or  
3943 until the drainage area is reduced by fifty percent, whichever is less;

3944       b. waters diverted for use by a federal, state, ((or)) tribal, or private fish  
3945 hatchery from the point of diversion for one((-) thousand((-) five((-) hundred feet or  
3946 the entire tributary if the tributary is highly significant for protection of downstream  
3947 water quality;

3948       c. waters within a federal, state, local, or private campground having more than  
3949 ten camping units. Water is considered to enter a campground when it reaches the  
3950 boundary of the park lands available for public use and comes within one-hundred feet  
3951 from a camping unit, trail, or other park improvement; or

3952       d. riverine ponds, wall-based channels, and other channel features that are used  
3953 by fish for off-channel habitat. These habitats are identified by their connection to a fish  
3954 habitat stream and accessible during some period of the year and accessible to fish.

3955 3. Type N (~~((waters include))~~) means all segments of aquatic areas that are not  
3956 type S or F (~~((waters))~~) and that are physically connected to type S or F (~~((waters))~~) by (~~((an~~  
3957 ~~above-ground))~~) a channel or piped system, stream, or wetland; and

3958 4. Type O (~~((waters include))~~) means all segments of aquatic areas that are not  
3959 type S, F, or N (~~((waters))~~) and that are not physically connected to type S, F, or N  
3960 (~~((waters))~~) by a (~~((n above-ground))~~) channel or piped system, (~~((pipe or culvert,))~~) stream, or  
3961 wetland, and which infiltrates water into the ground.

3962 B. For the purposes of (~~((the water))~~) aquatic area types in subsection A. of this  
3963 section(~~((, an above-ground))~~):

3964 1. A channel system is (~~((considered to be))~~) present if the (~~((one hundred year))~~)  
3965 floodplains of both the contributing and receiving waters are connected; and

3966 2. Fish habitat may be classified by:

3967 a. the presence of fish;

3968 b. a stream segment, that is perennial or ephemeral, with a defined channel of  
3969 two feet or greater bank full width and a gradient less than twenty percent; or

3970 c. any stream located within the floodplain of type S or F water.

3971 (~~((C. The department may determine that an area upstream of a legal human-made~~  
3972 ~~barrier is not fish habitat considering the following factors:~~

3973 1. ~~The human-made barrier is located beneath public infrastructure that is~~  
3974 ~~unlikely to be replaced and it is not feasible to remove the barrier without removing the~~  
3975 ~~public infrastructure;~~

3976           2. ~~The human-made barrier is in the Urban Growth Area established by the~~  
3977 ~~King County Comprehensive Plan and is located beneath one or more dwelling units and~~  
3978 ~~it is not feasible to remove the barrier without removing the dwelling unit;~~

3979           3. ~~The human-made barrier is located in a subbasin that is not designated "high"~~  
3980 ~~on the Basin and Shoreline Conditions Map which is included as Attachment A to~~  
3981 ~~Ordinance 15051; or~~

3982           4. ~~The human-made barrier is not identified for removal by a public agency or~~  
3983 ~~in an adopted watershed plan.))~~

3984           SECTION 87. Ordinance 15051, Section 193, as amended, and K.C.C.  
3985 21A.24.358 are hereby amended to read as follows:

3986           A. ~~((Aquatic area buffers))~~ Riparian areas shall ~~((be measured as follows))~~:

3987           1. ~~((From the ordinary high water mark or from the top of bank if the ordinary~~  
3988 ~~high water mark cannot be identified;~~

3989           2. ~~If))~~ Where the adjacent aquatic area is ((located within)) in a mapped severe  
3990 channel migration hazard area~~((, the aquatic area buffer width shall be the greater of the~~  
3991 ~~aquatic area buffer width as measured consistent with subsection A.1. of this section or))~~:

3992           a. include the severe channel migration hazard area; and

3993           b. extend from the outer edge of the severe channel migration hazard area;

3994           2. Where the adjacent aquatic area is not in a mapped severe channel migration  
3995 hazard, extend from the ordinary high water mark of the adjacent aquatic area, or from  
3996 the top of bank if the ordinary high water mark cannot be identified; and

3997           3. ~~((If the aquatic area buffer includes a steep slope hazard area or landslide~~  
3998 ~~hazard area, the aquatic area buffer width is the greater of either the aquatic area buffer in~~

3999 ~~this section or the top of the hazard area))~~ Extend in all directions from the point at which  
4000 the adjacent aquatic area enters or exits an underground conveyance system.

4001 B.1. ~~((Within the Urban Growth Area, aquatic area buffers))~~ Riparian area widths  
4002 shall be as follows:

- 4003 ~~((1. A type S or F aquatic area buffer is one hundred fifteen feet;~~  
4004 ~~2. A type S or F aquatic area buffer in a basin or shoreline designated as "high"~~  
4005 ~~on the Basin and Shoreline Conditions Map is one hundred sixty five feet;~~  
4006 ~~3. A type N aquatic area buffer is sixty five feet; and~~  
4007 ~~4. A type O aquatic area buffer is twenty five feet.))~~

| <u>Adjacent Aquatic Area Type</u>           | <u>Riparian Area Width</u> |
|---------------------------------------------|----------------------------|
| <u>S or F outside the Urban Growth Area</u> | <u>200 feet</u>            |
| <u>S or F in the Urban Growth Area</u>      | <u>180 feet</u>            |
| <u>N</u>                                    | <u>100 feet</u>            |
| <u>O</u>                                    | <u>50 feet</u>             |

4008 2. If the riparian area is in a steep slope hazard area or a landslide hazard area,  
4009 the riparian area width is the greater of:

- 4010 a. the riparian area width as described in this section; or  
4011 b. the extent of the landslide or steep slope hazard area upslope up to a  
4012 maximum total width of twice the riparian area width, as measured perpendicular to the  
4013 topographic contours;

4014 3. If the adjacent aquatic area is in an alluvial fan, the riparian area width is the  
4015 greater of:

- 4016 a. the riparian area width as described in this section; or

4017            b. the extent of the alluvial fan hazard area.

4018            C. ~~((Outside the Urban Growth Area, aquatic area buffers shall be as follows:~~

4019                1. ~~A type S or F aquatic area buffer is one hundred sixty five feet;~~

4020                2. ~~A type N aquatic area buffer is sixty five feet; and~~

4021                3. ~~A type O aquatic area buffer is twenty five feet.~~

4022            D. ~~Within the Bear Creek drainage basin a type N aquatic area buffer in a~~

4023 ~~designated regionally significant resource area is one hundred feet.~~

4024            E. ~~The department may approve a modification of buffer widths if))~~ Riparian area

4025 width averaging may be allowed if an ecological critical area report demonstrates:

4026                1. ~~((a. The department determines that through buffer averaging the ecological~~

4027 ~~structure and function of the resulting buffer is equivalent to or greater than the structure~~

4028 ~~and function before averaging and meets the following standards:~~

4029                    (1) ~~the total area of the buffer is not reduced;~~

4030                    (2) ~~the buffer area is contiguous; and~~

4031                    (3) ~~averaging does not result in the reduction of the minimum buffer for the~~

4032 ~~buffer area waterward of the top of the associated steep slopes or for a severe channel~~

4033 ~~migration hazard area;~~

4034                b. ~~the applicant demonstrates that the buffer cannot provide certain functions~~

4035 ~~because of soils, geology or topography, in which case the department shall establish a~~

4036 ~~buffer's width that protects the remaining ecological functions that the buffer can provide;~~

4037                e. ~~the site is zoned RA and is subject to an approved rural stewardship plan. In~~

4038 ~~modifying the buffers, the department shall consider factors such as, the basin and~~

4039 ~~shoreline condition, the location of the site within the basin and shoreline, the buffer~~  
4040 ~~condition and the amount of clearing;~~

4041 ~~d. a legally established roadway transects an aquatic area buffer, the roadway~~  
4042 ~~edge closest to aquatic area shall be the extent of the buffer, if the part of the buffer on~~  
4043 ~~the other side of the roadway provides insignificant biological or hydrological function in~~  
4044 ~~relation to the portion of the buffer adjacent to the aquatic area; or~~

4045 ~~e. the aquatic area is created or its type is changed as a result of enhancement~~  
4046 ~~or restoration projects that are not mitigation for a development proposal or alteration;~~  
4047 ~~and~~

4048 ~~2. If the site is located within the shoreline jurisdiction, that no net loss of~~  
4049 ~~shoreline ecological functions will result when considering projects that combine reduced~~  
4050 ~~buffers and habitat restoration.)) The total area of the riparian area after averaging is~~  
4051 ~~equal to or greater than the total area of the riparian area before averaging;~~

4052 2. The additional riparian area is contiguous with the standard riparian area;

4053 3. The riparian area at its narrowest point is no less than seventy-five percent of  
4054 the standard width;

4055 4. No net loss of riparian area, adjacent aquatic area, or shoreline ecological  
4056 functions and values shall occur as a result of the averaging. Revegetation consistent  
4057 with section 63 of this ordinance shall be installed in the riparian area where native  
4058 vegetation does not currently exist;

4059 5. The width of the riparian area is increased adjacent to the higher functioning  
4060 habitat or more sensitive portion of the aquatic area, and decreased adjacent to the lower  
4061 functioning or less sensitive portion;

4062           6. Where the riparian area includes a steep slope, landslide, or alluvial fan  
4063    hazard area, the width of the riparian area is not reduced waterward of the hazard areas;  
4064    and

4065           7. Riparian area averaging is not combined with any other riparian area width  
4066    modifications.

4067           SECTION 88. Ordinance 15051, Section 195, as amended, and K.C.C.  
4068    21A.24.365 are hereby amended to read as follows:

4069           The following development standards apply to development proposals and  
4070    alterations on sites containing aquatic areas or ~~((their buffers))~~ riparian areas:

4071           A. Unless allowed as an alteration exception under K.C.C. 21A.24.070, only the  
4072    alterations identified in K.C.C. 21A.24.045 are allowed in aquatic areas and ~~((aquatic~~  
4073    ~~area buffers))~~ riparian areas;

4074           B. Clearing, ~~((G))~~grading ~~((for allowed alterations in aquatic area buffers is))~~,  
4075    and other site disturbances are only allowed from May 1 to October 1. ~~((This))~~ The  
4076    period may be modified or restricted when the department determines it is necessary  
4077    along ~~((marine shorelines))~~ aquatic areas to protect critical forage fish and salmonid  
4078    migration, ~~((or))~~ as provided in K.C.C. 16.82.095, or as required by a state or federal  
4079    permit;

4080           C. The moisture-holding capacity of the topsoil layer on all areas of the site not  
4081    covered by impervious surfaces should be maintained by:

- 4082           1. Minimizing soil compaction, or
- 4083           2. Reestablishing natural soil structure and the capacity to infiltrate;

4084 D. New structures within a~~((n-aquatic-area-buffer))~~ riparian area should be sited  
 4085 to avoid the creation of future hazard trees and to minimize the impact on groundwater  
 4086 movement; ~~((and))~~

4087 E. To the maximum extent practical:

4088 1. The soil duff layer should not be disturbed, but if disturbed, should be  
 4089 redistributed to other areas of the project site where feasible;

4090 2. A spatial connection should be provided between vegetation within and  
 4091 outside the ~~((aquatic-area-buffer))~~ riparian area to prevent creation of wind throw hazards;  
 4092 and

4093 3. Hazard trees ~~((should be retained))~~ approved for removal in ~~((aquatic-area~~  
 4094 ~~buffers))~~ riparian areas ~~((and))~~ should be either topped or pushed over toward the aquatic  
 4095 area, and not removed from the riparian area; ~~((and))~~

4096 F. A project may include climate-adaptive plants, but shall not otherwise  
 4097 introduce any plant or wildlife that is not indigenous to the Puget Sound region into an  
 4098 aquatic area or riparian area unless authorized by state or federal approval; and

4099 G. If a ~~((restoration, enhancement or mitigation))~~ project ~~((proposes to place))~~  
 4100 includes large wood ~~((woody debris))~~ waterward of the ordinary high water mark of a  
 4101 ~~((F))~~type S aquatic area, the applicant shall ~~((consider))~~ minimize the potential for  
 4102 recreational hazards in project design.

4103 SECTION 89. Ordinance 10870, Section 485, as amended, and K.C.C.  
 4104 21A.24.380 are hereby amended to read as follows:

4105 In addition to the requirements in ~~((K.C.C. 21A.24.130, 21A.24.125 and~~  
 4106 ~~21A.24.133))~~ this chapter, the following applies to mitigation ~~((to compensate for the~~

4107 ~~adverse impacts associated with an alteration to~~) in an aquatic area or (~~(aquatic area~~  
4108 ~~buffer)~~) riparian area:

4109 A. Mitigation measures (~~((must))~~) shall achieve (~~((equivalent or greater))~~) equal or  
4110 better aquatic or riparian area functions than prealteration conditions, including, but not  
4111 limited to:

4112 1. Habitat complexity, connectivity, and other biological and ecological  
4113 functions;

4114 2. Seasonal hydrological dynamics(~~(,)~~) and water storage capacity (~~((and water~~  
4115 ~~quality))~~); (~~(and)~~)

4116 3. (~~((Geomorphic and habitat processes and functions))~~) Shade and temperature  
4117 control, pollution removal, water purification, and other water quality functions; and

4118 4. Natural erosion and sediment delivery, nutrient and detritus delivery, natural  
4119 bank stabilization, sources and recruitment of large wood, cover for aquatic and terrestrial  
4120 animals, terrestrial-based aquatic prey resources, and other geomorphic and habitat  
4121 processes and functions;

4122 B. (~~((To the maximum extent practical, permanent alterations that require~~  
4123 ~~restoration or enhancement of the altered aquatic area, aquatic area buffer or another~~  
4124 ~~aquatic area or aquatic area buffer must consider))~~) The mitigation plan shall address the  
4125 following design factors, as applicable (~~((to the function being mitigated))~~):

4126 1. The natural channel or shoreline reach dimensions including its depth, width,  
4127 length, and gradient;

4128 2. The horizontal alignment and sinuosity;

4129           3. The channel bed, marine intertidal area, sea bed, or lake bottom with identical  
4130 or similar substrate and similar erosion and sediment transport dynamics;

4131           4. Bank ~~((and buffer))~~ configuration and erosion and sedimentation rates;  
4132 ~~((and))~~

4133           5. ~~((Similar))~~ Native vegetation or climate-adaptive plant species diversity, size,  
4134 and densities ((in the channel, sea bed or lake bottom and on the)) comparable to a nearby  
4135 relatively undisturbed riparian ((bank or buffer)) area with similar configuration, spatial  
4136 arrangement, and solar aspect;

4137           6. Similar slope and elevation; and

4138           7. Similar soil conditions, including moisture, saturation, and organic content;

4139           C. Mitigation ~~((to compensate))~~ for ~~((adverse impacts))~~ aquatic areas shall meet  
4140 the following standards:

4141           1. Mitigation shall ((N))not be located upstream of a barrier to fish passage;

4142           2. ~~((Is equal or greater in biological function; and~~

4143           3.)) To the maximum extent practical ((is)), mitigation shall be located on the  
4144 development proposal site ((of the alteration)) or within one-half mile of the site and in  
4145 the same aquatic area reach ((at a 1:1 ratio of area of mitigation to area of alteration; or  
4146 4. Is)). If mitigation cannot be located on the site or within one-half mile of the  
4147 site, it shall be located in the same ((aquatic area)) drainage subbasin or marine shoreline  
4148 ~~((and attains the following ratios of area of functional mitigation to area of alteration:~~

4149           a. ~~a 3:1 ratio for a type S or F aquatic area; and~~

4150           b. ~~a 2:1 ratio for a type N or O aquatic area)); and~~

4151           3. Mitigation ratios for aquatic areas are as follows:

| <u>Aquatic Area<br/>and Location</u> | <u>Mitigation Location</u>                                                                                             | <u>Mitigation Ratio<br/>(mitigation area to<br/>impact area)</u> |
|--------------------------------------|------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------|
| <u>All aquatic areas</u>             | <u>On the development proposal site</u>                                                                                | <u>2:1</u>                                                       |
| <u>All aquatic areas</u>             | <u>Within 1/2 mile of the development<br/>proposal site and in the same aquatic reach</u>                              | <u>2:1</u>                                                       |
| <u>Type S or F</u>                   | <u>More than 1/2 mile from the development<br/>proposal site in the same drainage subbasin<br/>or marine shoreline</u> | <u>3:1</u>                                                       |
| <u>Type N or O</u>                   | <u>More than 1/2 mile from the development<br/>proposal site in the same drainage subbasin<br/>or marine shoreline</u> | <u>2:1</u>                                                       |

4152 D. For purposes of subsection C. of this section, ((a)) mitigation ((measure)) is in  
4153 the same aquatic area reach if the length of aquatic area ((shoreline)) or riparian area  
4154 meets the following criteria:

- 4155 1. Similar geomorphic conditions including slope, soil, aspect, and substrate;
- 4156 2. Similar processes including erosion and transport of sediment and ((woody  
4157 debris)) large wood;
- 4158 3. ((Equivalent)) Equal or better biological conditions, including presence of  
4159 and habitat for invertebrates, fish, wildlife, and vegetation; and
- 4160 4. ((Equivalent)) Equal or better biological functions, including fish and wildlife  
4161 mating, reproduction, rearing, migration, and refuge; ((or)) and

4162 5. For tributary streams, a distance of no more than one-half mile from the main  
4163 stem;

4164 E. ~~((The department may reduce the mitigation ratios in subsection C. of this~~  
4165 ~~section to 2:1 ratio for a type S or F aquatic area and 1.5:1 ratio for a type N or O aquatic~~  
4166 ~~area if the applicant provides a scientifically rigorous mitigation monitoring program that~~  
4167 ~~includes the following elements:~~

4168 1. ~~Monitoring methods that ensure that the mitigation meets the approved~~  
4169 ~~performance standards identified by the department;~~

4170 2. ~~Financing or funding guarantees for the duration of the monitoring program;~~  
4171 ~~and~~

4172 3. ~~Experienced, qualified staff to perform the monitoring;))~~ For riparian areas,  
4173 on-site mitigation shall use the ratios in subsection E.1. or E.2. of this section. Mitigation  
4174 shall consist of restoration or creation, including through revegetation with native  
4175 vegetation or climate-adaptive plants and removing invasive species, or both.

4176 1. Standard on-site mitigation ratios for riparian areas are as follows:

| <u>Adjacent Aquatic Area Type</u> | <u>On-site Mitigation Ratio (mitigation area to impact area)</u> |
|-----------------------------------|------------------------------------------------------------------|
| <u>Shoreline (S)</u>              | <u>3:1</u>                                                       |
| <u>Fish bearing (F)</u>           | <u>3:1</u>                                                       |
| <u>Non-fish bearing (N)</u>       | <u>3:1</u>                                                       |
| <u>Other (O)</u>                  | <u>2:1</u>                                                       |

4177 2. The department may approve alternative on-site mitigation ratios for riparian  
4178 areas, if the alternative mitigation provides equal or better ecological function than the

4179 standard mitigation requirements. Alternative mitigation is based on the type of existing  
 4180 vegetation impacted, as follows:

| <u>Adjacent Aquatic Area</u><br><u>Type</u> | <u>Impacts to Woody</u><br><u>Vegetation (Trees and</u><br><u>Shrubs)</u> | <u>Impacts to Non-Woody</u><br><u>Vegetation or</u><br><u>Unvegetated Areas</u> |
|---------------------------------------------|---------------------------------------------------------------------------|---------------------------------------------------------------------------------|
| <u>Shoreline (S)</u>                        | <u>2:1 ratio with at least one</u>                                        | <u>1.5:1 ratio with at least one</u>                                            |
| <u>Fish bearing (F)</u>                     | <u>primary action or three</u>                                            | <u>primary action or two</u>                                                    |
| <u>Non-fish bearing (N)</u>                 | <u>secondary actions</u>                                                  | <u>secondary actions</u>                                                        |
| <u>Other (O)</u>                            | <u>1.5:1 ratio with at least one</u>                                      | <u>1:1 ratio with at least one</u>                                              |
|                                             | <u>primary action or two</u>                                              | <u>primary or secondary</u>                                                     |
|                                             | <u>secondary actions</u>                                                  | <u>action</u>                                                                   |

4181 a. Primary actions include:

4182 (1) placing large wood in adjacent aquatic areas, when not installed for  
 4183 shoreline stabilization or flood protection facilities;

4184 (2) removing a fish passage barrier, if not required by the development  
 4185 permit;

4186 (3) removing an aquatic area transportation crossing, such as a road, bridge,  
 4187 or trail, and revegetating with native vegetation or climate-adaptive plants as appropriate.

4188 Utility-only crossings are not included under this action;

4189 (4) removing shoreline armoring, revetments, or levees; or

4190 (5) other similar actions as determined by the department.

4191 b. Secondary actions include:

- 4192                    (1) adding area contiguous to the existing riparian area at a ratio of 0.5:1  
 4193                    where otherwise not required. If the area of addition does not have an equal ecological  
 4194                    function to the impact area, the area shall be revegetated with native vegetation or  
 4195                    climate-adaptive plants;
- 4196                    (2) placing large wood in riparian areas or an adjacent floodplain;  
 4197                    (3) installing wildlife snags or similar wildlife nesting or rearing habitat;  
 4198                    (4) removing floodplain fill and replanting with native vegetation or climate-  
 4199                    adaptive plants as appropriate; or
- 4200                    (5) removing a fish passage barrier if required by a development permit;  
 4201                    (6) other similar actions as approved by the department;

4202                    F.1. For riparian areas, off-site mitigation in the same drainage subbasin may be  
 4203                    allowed if the mitigation is unable to be located on or within one-half mile of the site.  
 4204                    Off-site mitigation shall be within a mitigation banking site, resource mitigation reserve,  
 4205                    or conservation easement if on private property.

4206                    2. Off-site compensatory mitigation ratios riparian areas are as follows:

| <u>Adjacent Aquatic Area Type</u> | <u>Off-Site Compensatory Mitigation</u><br><u>Ratio</u> |
|-----------------------------------|---------------------------------------------------------|
| <u>Shoreline (S)</u>              | <u>4:1</u>                                              |
| <u>Fish bearing (F)</u>           | <u>4:1</u>                                              |
| <u>Non-fish bearing (N)</u>       | <u>4:1</u>                                              |
| <u>Other (O)</u>                  | <u>3:1</u>                                              |

4207                    G. For rectifying an illegal alteration to ~~((any type of))~~ an aquatic area or ~~((its~~  
 4208                    buffer)) riparian area, mitigation ~~((measures must meet the following standards:~~

4209           ~~1-)) shall be ((1-))~~located on the site of the illegal alteration, at a ~~((1-1))~~  
4210 compensatory mitigation ratio of ~~((area of mitigation to area of alteration and~~  
4211           ~~2. To the maximum extent practical,))~~ of 3:1, replicate~~((s))~~ the natural  
4212 prealteration configuration at its natural prealteration location including the factors in  
4213 subsection B. of this section~~((; and~~  
4214           ~~G. The department may modify the requirements in this section if the applicant~~  
4215 ~~demonstrates that, with respect to each aquatic area function, greater functions can be~~  
4216 ~~obtained in the affected hydrologic unit that the department may determine to be the~~  
4217 ~~drainage subbasin through alternative mitigation measures.~~  
4218           ~~H. For temporary alterations to an aquatic area or its buffer that is predominately~~  
4219 ~~woody vegetation, the department may require mitigation in addition to restoration of the~~  
4220 ~~altered aquatic area or buffer))~~ to the maximum extent practical.  
4221           SECTION 90. Ordinance 15051, Section 198, as amended, and K.C.C.  
4222 21A.24.382 are hereby amended to read as follows:  
4223           The following development standards apply to development proposals and  
4224 alterations on sites containing wildlife habitat conservation areas:  
4225           A. Unless allowed as an alteration exception under K.C.C. 21A.24.070, only the  
4226 alterations identified in K.C.C. 21A.24.045 are allowed within a wildlife habitat  
4227 conservation area;  
4228           B. For a bald eagle:  
4229           1. The wildlife habitat conservation area is ~~((an area with))~~ a four-hundred-foot  
4230 radius from an active nest;

4231 2. Between March 15 and April 30, alterations are not allowed within eight  
4232 hundred feet of the nest; and

4233 ((2)) 3. Between January 1 and August 31, land clearing machinery, such as  
4234 bulldozers, graders, or other heavy equipment, ~~((may))~~ shall not be operated within eight  
4235 hundred feet of the nest;

4236 C. For a great blue heron:

4237 1. The wildlife habitat conservation area is ~~((an area with))~~ an eight-hundred-  
4238 twenty-foot radius from the rookery. The department may increase the radius up to an  
4239 additional one-hundred sixty-four feet if the department determines that the population of  
4240 the rookery is declining; and

4241 2. Between January 1 and July 31, clearing or grading are not allowed within  
4242 nine-hundred-twenty-four feet of the rookery;

4243 D. For a marbled murrelet, the wildlife habitat conservation area is ~~((an area~~  
4244 ~~with))~~ a one-half-mile radius around an active nest;

4245 E. For a northern goshawk, the wildlife habitat conservation area ~~((is an area))~~  
4246 with a one-thousand-five-hundred-foot radius around an active nest located outside of the  
4247 ~~((u))~~Urban ~~((g))~~Growth ~~((a))~~Area;

4248 F. For an osprey:

4249 1. The wildlife habitat conservation area is ~~((an area with))~~ a two-hundred-  
4250 thirty-foot radius around an active nest; and

4251 2. Between April 1 and September 30, alterations are not allowed within six-  
4252 hundred-sixty feet of the nest;

4253 G. For a peregrine falcon:

4254           1. The wildlife habitat conservation area is an area extending for a distance of  
4255   one-thousand feet of an eyrie on a cliff face, the area immediately above the eyrie on the  
4256   rim of the cliff, and the area immediately below the cliff;

4257           2. Between March 1 and June 30, land-clearing activities that result in loud  
4258   noises, such as from blasting, chainsaws, or heavy machinery, are not allowed within  
4259   one-half mile of the eyrie; and

4260           3. New power lines ~~((may))~~ shall not be constructed within one-thousand feet of  
4261   the eyrie;

4262           H. For a spotted owl, the wildlife habitat conservation area is ~~((an area with))~~ a  
4263   three-thousand-seven-hundred-foot radius from an active nest;

4264           I. For a Townsend's big-eared bat:

4265           1. Between June 1 and October 1, the wildlife habitat conservation area is ~~((an~~  
4266   ~~area with))~~ a four-hundred-fifty-foot radius from the entrance to a cave or mine, located  
4267   outside of the urban area, with an active nursery colony;

4268           2. Between November 1 and March 31, the wildlife habitat conservation area is  
4269   ~~((an area with))~~ a four-hundred-fifty-foot radius around the entrance to a cave or mine  
4270   located outside the ~~((u))~~Urban ~~((g))~~Growth ~~((a))~~Area serving as a winter hibernacula;

4271           3. Between March 1 and November 30, a building, bridge, tunnel, or other  
4272   structure used solely for day or night roosting ~~((may))~~ shall not be altered or destroyed;

4273           4. Between May 1 and September 15, the entrance into a cave or mine that is  
4274   protected because of bat presence ~~((is))~~ shall be protected from human entry; and

4275           5. A gate across the entrance to a cave or mine that is protected because of bat  
4276   presence ~~((must))~~ shall be designed to allow bats to enter and exit the cave or mine;

4277 J. For a Vaux's swift:

4278 1. The wildlife habitat conservation area is ~~((an area with))~~ a three-hundred-foot

4279 radius around an active nest located outside of the ~~((u))~~Urban ~~((g))~~Growth ~~((a))~~Areas;

4280 2. Between April 1 and October 31, clearing, grading, or outdoor construction is

4281 not allowed within four hundred feet of an active or potential nest tree. The applicant

4282 may use a species survey to demonstrate that the potential nest tree does not contain an

4283 active nest;

4284 K. The department shall require protection of an active breeding site of any

4285 federal or state listed endangered, threatened, sensitive, and candidate species or King

4286 County species of local importance ~~((not listed in subsections B. through J. of this~~

4287 ~~section))~~. If the Washington state Department of Fish and Wildlife has adopted

4288 management recommendations for a species covered by this subsection, the department

4289 shall follow those management recommendations. If management recommendations

4290 have not been adopted, the department shall base protection decisions on best available

4291 science.

4292 SECTION 91. Ordinance 11621, Section 52, as amended, and K.C.C.

4293 21A.24.385 are hereby amended to read as follows:

4294 A. ~~((The department shall make certain that s))~~Segments of the wildlife habitat

4295 network ~~((are))~~ shall be set aside and protected along the designated wildlife habitat

4296 network adopted by the ~~((King County))~~ Comprehensive Plan ~~((as follows:))~~.

4297 ~~((A-))~~ This section applies to the following development proposals on parcels that

4298 include a segment of the designated wildlife habitat network:

4299 1. All ~~((urban planned developments, fully contained communities,))~~ binding  
4300 site plans, subdivisions, and short subdivisions; and

4301 2. All development proposals on individual lots unless a segment of the wildlife  
4302 habitat network in full compliance with K.C.C. 21A.24.386 already exists in a tract,  
4303 easement, or setback area, and a notice of the existence of the segment has been recorded;

4304 B. Segments of the wildlife habitat network ~~((must))~~ shall be identified and  
4305 protected in one of the following ways:

4306 1. In ~~((urban planned developments, fully contained communities,))~~ binding site  
4307 plans, subdivisions, and short subdivisions, native vegetation is placed in a contiguous  
4308 permanent open((-))\_space tract with all developable lots sited on the remaining portion  
4309 of the ~~((project))~~ development proposal site, or the lots are designed so that required  
4310 setback areas can form a contiguous setback covering the network segments; or

4311 2. For individual lots, the network is placed in a county-approved setback area.  
4312 To the maximum extent practical, existing native vegetation is included in the network.  
4313 The notice required by K.C.C. ~~((21A.27.170))~~ 21A.24.170 is required; and

4314 C. All wildlife habitat network tracts or setback areas ~~((must))~~ shall meet the  
4315 design standards in K.C.C. 21A.24.386.

4316 SECTION 92. Ordinance 11621, Section 53, as amended, and K.C.C.  
4317 21A.24.386 are hereby amended to read as follows:

4318 The following standards apply to development proposals and alterations on sites  
4319 containing wildlife habitat network:

4320 A. Unless allowed as an alteration exception under K.C.C. 21A.24.070, only the  
4321 alterations identified in K.C.C. 21A.24.045 are allowed in the wildlife habitat network;

4322 B. The wildlife habitat network is sited to meet the following conditions:

4323 1. The network forms one contiguous tract or setback area that enters and exits

4324 the property where the network crosses the property boundary;

4325 2. To the maximum extent practical, the network maintains a width of three-

4326 hundred feet. The network width shall not be less than one-hundred-fifty feet at any

4327 point; and

4328 3. The network is contiguous with and includes critical areas and their buffers;

4329 4. To the maximum extent practical, the network connects isolated critical areas

4330 or habitat; and

4331 5. To the maximum extent practical, the network connects with wildlife habitat

4332 network segments, open space tracts, or wooded areas on adjacent properties, if present;

4333 C. The wildlife habitat network tract (~~((must))~~) shall be permanently marked in

4334 accordance with this chapter;

4335 D. An applicant proposing recreation, forestry, or any other use compatible with

4336 preserving and enhancing the habitat value of the wildlife habitat network located within

4337 the site (~~((must))~~) shall have an approved management plan. The applicant shall include

4338 and record the approved management plan for a binding site plan or subdivision with the

4339 covenants, conditions, and restrictions (CCRs), if any. Clearing within the wildlife

4340 habitat network in a tract or tracts is limited to that allowed by an approved management

4341 plan;

4342 E. If the wildlife habitat network is contained in a setback area, a management

4343 plan is not required. Clearing is not allowed within a wildlife habitat network within a

4344 setback area on individual lots, unless the property owner has an approved management  
4345 plan;

4346 F. In ~~((urban planned developments, fully contained communities,))~~ binding site  
4347 plans, subdivisions, and short subdivisions, a homeowners association or other entity  
4348 capable of long term maintenance and operation shall monitor and assure compliance  
4349 with any approved management plan;

4350 G. The department may credit a permanent open space tract containing the  
4351 wildlife habitat network toward the other applicable requirements such as surface water  
4352 management and the recreation space requirement of K.C.C. 21A.14.180, if the proposed  
4353 uses within the tract are compatible with preserving and enhancing the wildlife habitat  
4354 value. Restrictions on other uses within the wildlife habitat network tract shall be clearly  
4355 identified in the management plan; and

4356 H. The director may waive or reduce these standards for public facilities such as  
4357 schools, fire stations, parks, and road projects.

4358 SECTION 93. Ordinance 15051, Section 204, and K.C.C. 21A.24.388 are hereby  
4359 amended to read as follows:

4360 In addition to the requirements in ~~((K.C.C. 21A.24.130, 21A.24.125 and~~  
4361 ~~21A.24.133))~~ this chapter, the following applies to mitigation ~~((to compensate))~~ for ~~((the~~  
4362 ~~adverse impacts associated with))~~ wildlife habitat conservation areas and wildlife habitat  
4363 networks:

4364 A. Mitigation ~~((to compensate))~~ for ~~((the adverse impacts to))~~ a wildlife habitat  
4365 conservation area ~~((must))~~ shall prevent disturbance of each protected species. On-site  
4366 mitigation may include management practices, such as timing of the disturbance. Off-site

4367 mitigation is limited to sites that will enhance the ~~((wildlife))~~ habitat ~~((conservation area))~~  
4368 of the species impacted;

4369 B. Mitigation ~~((to compensate))~~ for ~~((the adverse impacts to the))~~ a wildlife  
4370 habitat network ~~((must))~~ shall achieve ~~((equivalent or greater))~~ equal or better biological  
4371 functions, including, but not limited to, habitat complexity and connectivity functions.

4372 Specific mitigation requirements for impacts to the wildlife habitat network shall:

4373 1. Expand or enhance the wildlife network as close to the location of impact as  
4374 feasible; and

4375 2. Attain the following ratios of area of mitigation to area of alteration:

4376 a. for mitigation on site:

4377 (1) 1.5:1 ratio for rectifying an illegal alteration to a wildlife habitat network;

4378 and

4379 (2) 1.5:1 ratio for enhancement or restoration; and

4380 b. for mitigation off-site:

4381 (1) 2:1 ratio for rectifying an illegal alteration to a wildlife habitat network;

4382 and

4383 (2) 3:1 ratio for enhancement or restoration;

4384 C. For temporary ~~((alterations))~~ impacts, the department may require  
4385 ~~((rectification))~~ rehabilitation, restoration, or enhancement of the altered wildlife habitat  
4386 network;

4387 D. The department may increase the width of the wildlife habitat network to  
4388 mitigate for risks to habitat functions;

4389 E. To the maximum extent practical, mitigation projects involving wildlife  
4390 habitat network restoration should provide replication of the site's prealteration natural  
4391 environment including:

- 4392 1. Soil type, conditions, and physical features;
- 4393 2. Vegetation diversity and density; and
- 4394 3. Biological and habitat functions; and

4395 F. The department may modify the requirements in this section if the applicant  
4396 demonstrates that greater wildlife habitat functions will be obtained in the same wildlife  
4397 habitat conservation area or wildlife habitat network through alternative mitigation  
4398 measures.

4399 NEW SECTION. SECTION 94. There is hereby added to K.C.C. chapter  
4400 21A.24, to follow K.C.C. 21A.24.460, a new section to read as follows:

4401 Violations of this chapter are enforced in accordance with K.C.C. 21A.50.035 and  
4402 K.C.C. Title 23.

4403 SECTION 95. Ordinance 16958, Section 31, as amended, and K.C.C.  
4404 21A.25.100 are hereby amended to read as follows:

4405 A. The shoreline use table in this section determines whether a specific use is  
4406 allowed within each of the shoreline environments. The shoreline environment is located  
4407 on the vertical column and the specific use is located on the horizontal row of the table.  
4408 The specific uses are grouped by the shoreline use categories in WAC 173-26-241. The  
4409 specific uses are defined by those uses in K.C.C. chapter 21A.08. The table should be  
4410 interpreted as follows:

4411           1. If the cell is blank in the box at the intersection of the column and the row,  
4412 the use is prohibited in that shoreline environment;

4413           2. If the letter "P" appears in the box at the intersection of the column and the  
4414 row, the use may be allowed within the shoreline environment;

4415           3. If the letter "C" appears in the box at the intersection of the column and the  
4416 row, the use may be allowed within the shoreline environment subject to the shoreline  
4417 conditional use review procedures specified in K.C.C. 21A.44.100;

4418           4. If a number appears in the box at the intersection of the column and the row,  
4419 the use may be allowed subject to the appropriate review process in this section, the  
4420 general requirements of this chapter and the specific development conditions indicated  
4421 with the corresponding number in subsection C. of this section. If more than one number  
4422 appears after a letter, all numbers apply;

4423           5. If more than one letter-number combination appears in the box at the  
4424 intersection of the column and the row, the use is allowed in accordance with each letter-  
4425 number combination;

4426           6. A shoreline use may be allowed in the aquatic environment only if that  
4427 shoreline use is allowed in the adjacent shoreland environment; and

4428           7. This section does not authorize a land use that is not allowed by the  
4429 underlying zoning, but may add additional restrictions or conditions or prohibit specific  
4430 land uses within the shoreline jurisdiction. When there is a conflict between the allowed  
4431 land uses in K.C.C. chapter 21A.08 and shoreline uses in this section, preference for  
4432 shoreline uses shall first be given to water-dependent uses, then to water related uses, and  
4433 finally to water enjoyment uses. All uses in the shoreline jurisdiction shall comply with

4434 all relevant county code provisions and with the King County ((S))shoreline ((M))master

4435 ((P))program.

4436 B. Shoreline uses.

|                                                                                     | High<br>Intensi<br>ty | Resident<br>ial | Rur<br>al | Conserva<br>ncy | Resour<br>ce | Fores<br>try | Natur<br>al | Aqua<br>tic |

| water production<br><br>(K.C.C.<br><br>21A.08.100) |  |  |  |  |  |  |  |  |
|----------------------------------------------------|--|--|--|--|--|--|--|--|

4437 C. Development conditions:

4438 1. In the ((N))natural shoreline environment, limited to low intensity agriculture,  
4439 such as livestock use with an animal unit density of no more than one per two acres in the  
4440 shoreline jurisdiction, seasonal hay mowing and related activities, and horticulture not to  
4441 exceed twenty percent of the site area located within the shoreline jurisdiction.

4442 2.a. The supporting infrastructure for aquaculture may be located landward of  
4443 the aquaculture operation, subject to the limitations of K.C.C. Title 21A.

4444 b. The aquaculture operation shall meet the standards in K.C.C. 21A.25.110.

4445 c. In aquatic areas adjacent to the residential shoreline environment, net pen  
4446 facilities shall be located no closer than one thousand five hundred feet from the ordinary  
4447 high water mark of this environment, unless the department allows a specific lesser  
4448 distance that it determines is appropriate based upon a visual impact analysis. Other  
4449 types of floating culture facilities may be located within one thousand five hundred feet  
4450 of the ordinary high water mark if supported by a visual impact analysis.

4451 d. In aquatic areas adjacent to the rural shoreline environment, net pen  
4452 facilities shall be located no closer than one thousand five hundred feet from the ordinary  
4453 high water mark of this environment, unless the department allows a specific lesser  
4454 distance that it determines is appropriate based upon a visual impact analysis.

4455 e. In the natural shoreline environment and aquatic areas adjacent to the natural  
4456 shoreline environment, commercial net pens are prohibited, and other aquaculture

4457 activities are limited to activities that do not require structures, facilities, or mechanized  
4458 harvest practices and that will not alter the natural systems, features, or character of the  
4459 site.

4460 f. Farm-raised geoduck aquaculture requires a shoreline substantial  
4461 development permit if a specific project or practice causes substantial interference with  
4462 normal public use of the surface waters.

4463 g. A conditional use permit is required for new commercial geoduck  
4464 aquaculture only, consistent with WAC 173-26-241(3)(b). All subsequent cycles of  
4465 planting and harvest shall not require a new conditional permit.

4466 3.a. New marinas are not allowed along the east shore of Vashon-Maury Island,  
4467 from Piner Point to Point Robinson.

4468 b. Marinas shall meet the standards in K.C.C. 21A.25.120.

4469 4. Water-dependent personal services land uses in K.C.C. 21A.08.050 are  
4470 allowed. Nonwater-dependent personal services land uses in K.C.C. 21A.08.050 are only  
4471 allowed on sites that are not contiguous with the ordinary high water mark or on sites that  
4472 do not have an easement that provides direct access to the water.

4473 5.a. Water-dependent personal services land uses in K.C.C. 21A.08.050 are  
4474 allowed.

4475 b. Nonwater-dependent personal services land uses in K.C.C. 21A.08.050 are  
4476 only allowed as part of a shoreline mixed-use development that includes water-dependent  
4477 uses.

4478 c. Nonwater-oriented personal services land uses shall provide a ~~((significant))~~  
4479 public benefit by ~~((helping to achieve))~~ achieving one or more of the following shoreline  
4480 master program goals:

- 4481 (1) economic development for water-dependent uses;
- 4482 (2) public access;
- 4483 (3) water-oriented recreation;
- 4484 (4) conservation of critical areas, scenic vistas, aesthetics, or fish and wildlife  
4485 habitat; ~~((and))~~ or
- 4486 (5) protection and restoration of historic properties.

4487 6. Water-dependent business services uses in K.C.C. 21A.08.050 are allowed.  
4488 Water-related business service~~((s))~~ uses are only allowed as part of a shoreline mixed-use  
4489 development and only if they support a water-dependent use. The water-related business  
4490 service~~((s))~~ uses shall comprise less than one-half of the square footage of the structures  
4491 or the portion of the site within the shoreline jurisdiction.

4492 7.a. Water-dependent retail uses in K.C.C. 21A.08.050 are allowed.

4493 b. Nonwater-dependent retail uses in K.C.C. 21A.08.050 are only allowed as  
4494 part of a shoreline mixed-use development if the nonwater-dependent retail use supports  
4495 a water-dependent use. Nonwater-dependent uses shall comprise less than one-half of the  
4496 square footage of the structures or the portion of the site within the shoreline jurisdiction.

4497 c. Nonwater-oriented retail uses shall provide a significant public benefit by  
4498 helping to achieve one or more of the following shoreline master program goals:

- 4499 (1) economic development for water-dependent uses;
- 4500 (2) public access;

4501 (3) water-oriented recreation;

4502 (4) conservation of critical areas, scenic vistas, aesthetics, or fish and wildlife

4503 habitat; and

4504 (5) protection and restoration of historic properties.

4505 8. Water-dependent retail uses in K.C.C. 21A.08.050 are allowed. Nonwater-

4506 dependent retail uses in K.C.C. 21A.08.050 are only allowed if the retail use provides a

4507 significant public benefit by helping to achieve one or more of the following shoreline

4508 master program goals:

4509 a. economic development for water-dependent uses;

4510 b. public access;

4511 c. water-oriented recreation;

4512 d. conservation of critical areas, scenic vistas, aesthetics, or fish and wildlife

4513 habitat; and

4514 e. protection and restoration of historic properties.

4515 9.a. Water-dependent government services in K.C.C. 21A.08.055 are allowed.

4516 b. Nonwater-dependent government services in K.C.C. 21A.08.055 are only

4517 allowed as part of a shoreline mixed-use development if the nonwater-dependent

4518 government use supports a water-dependent use. Nonwater-dependent uses shall

4519 comprise less than one-half of the square footage of the structures or the portion of the

4520 site within the shoreline jurisdiction. Only low-intensity water-dependent government

4521 services are allowed in the ~~((N))~~natural environment.

4522 10. The following standards apply to government services uses within the

4523 ~~((A))~~aquatic environment:

4524           a. Stormwater and sewage outfalls are allowed if upland treatment and  
4525     infiltration to groundwater, streams, or wetlands is not feasible and there is no impact on  
4526     critical saltwater habitats, salmon migratory habitat, and the nearshore zone. However,  
4527     stormwater and sewage outfalls are not allowed in the Maury Island Aquatic Reserve,  
4528     except from Piner Point to Point Robinson;

4529           b. Water intakes shall not be located near fish spawning, migratory, or rearing  
4530     areas. Water intakes shall adhere to Washington state Department of Fish and Wildlife  
4531     fish screening criteria. To the maximum extent practical, intakes should be placed at  
4532     least thirty feet below the ordinary high water mark;

4533           c. Desalinization facilities shall not be located near fish spawning, migratory,  
4534     or rearing areas. Intakes should generally be placed deeper than thirty feet below the  
4535     ordinary high water mark and shall adhere to Washington state Department Fish and  
4536     Wildlife fish screening criteria. Discharge of desalination wastewater or concentrated  
4537     mineral is not allowed in the Maury Island Aquatic Reserve, except that outside the Inner  
4538     and Outer Harbormaster Harbor, discharge may be considered if there is no impact on  
4539     critical saltwater habitats, salmon migratory habitat, and the nearshore zone;

4540           d. Cable crossings for telecommunications and power lines shall:

4541                 (1) be routed around or drilled below aquatic critical habitat or species;

4542                 (2) be installed in sites free of vegetation, as determined by physical or video  
4543     seabed survey;

4544                 (3) be buried, preferably using directional drilling, from the uplands to  
4545     waterward of the deepest documented occurrence of native aquatic vegetation; and

4546                 (4) use the best available technology;

4547 e. Oil, gas, water, and other pipelines shall meet the same standards as cable  
4548 crossings and in addition:

4549 (1) pipelines shall be directionally drilled to depths of seventy feet or one half  
4550 mile from the ordinary high water mark; and

4551 (2) use the best available technology for operation and maintenance;

4552 f. Breakwaters are not allowed within the Maury Island Aquatic Reserve or  
4553 within the ~~((A))~~ aquatic environment adjacent to the ~~((C))~~ conservancy and ~~((N))~~ natural  
4554 shorelines.

4555 11. In the ~~((N))~~ natural shoreline environment, limited to low intensity forest  
4556 practices that conserve or enhance the health and diversity of the forest ecosystem or  
4557 ecological and hydrologic functions conducted for the purpose of accomplishing specific  
4558 ecological enhancement objectives. In all shoreline environments, forest practices shall  
4559 meet the standards in K.C.C. 21A.25.130.

4560 12. Manufacturing uses in the shoreline environment shall give preference first  
4561 to water-dependent manufacturing uses and second to water-related manufacturing uses:

4562 a. ~~((N))~~ nonwater-oriented manufacturing uses are allowed only:

4563 (1) as part of a shoreline mixed-use development that includes a water-  
4564 dependent use, but only if the water-dependent use comprises over fifty percent of the  
4565 floor area or portion of the site within the shoreline jurisdiction;

4566 (2) on sites where navigability is severely limited; or

4567 (3) on sites that are not contiguous with the ordinary high water mark or on  
4568 sites that do not have an easement that provides direct access to the water; and

4569 (4) all nonwater-oriented manufacturing uses shall also provide a significant  
4570 public benefit, such as ecological restoration, environmental clean-up, historic  
4571 preservation, or water-dependent public education;

4572 b. public access is required for all manufacturing uses unless it would result in  
4573 a public safety risk or is incompatible with the use;

4574 c. shall be located, designed, and constructed in a manner that ensures that  
4575 there are no significant adverse impacts to other shoreline resources and values;

4576 d. restoration is required for all new manufacturing uses; and

4577 e. boat repair facilities are not allowed within the Maury Island Aquatic  
4578 Reserve, except as follows:

4579 (1) engine repair or maintenance conducted within the engine space without  
4580 vessel haul-out;

4581 (2) topside cleaning, detailing, and bright work;

4582 (3) electronics servicing and maintenance;

4583 (4) marine sanitation device servicing and maintenance that does not require  
4584 haul-out;

4585 (5) vessel rigging; and

4586 (6) minor repairs or modifications to the vessel's superstructure and hull  
4587 above the waterline that do not exceed twenty-five percent of the vessel's surface area  
4588 above the waterline.

4589 13. The water-dependent in-stream portion of a hydroelectric generation facility,  
4590 wastewater treatment facility, and municipal water production are allowed, including the  
4591 upland supporting infrastructure, and shall provide for the protection and preservation, of

ecosystem-wide processes, ecological functions, and cultural resources, including, but not limited to, fish and fish passage, wildlife and water resources, shoreline critical areas, hydrogeological processes, and natural scenic vistas.

14. New in-stream portions of utility facilities may be located within the shoreline jurisdiction if:

- a. there is no feasible alternate location;
- b. provision is made to protect and preserve ecosystem-wide processes, ecological functions, and cultural resources, including, but not limited to, fish and fish passage, wildlife and water resources, shoreline critical areas, hydrogeological processes, and natural scenic vistas; and
- c. the use complies with the standards in K.C.C. 21A.25.260.

15. Limited to in-stream infrastructure, such as bridges, and shall consider the priorities of the King County Shoreline Protection and Restoration Plan when designing in-stream transportation facilities. In-stream structures shall provide for the protection and preservation of ecosystem-wide processes, ecological functions, and cultural resources, including, but not limited to, fish and fish passage, wildlife and water resources, shoreline critical areas, hydrogeological processes, and natural scenic vistas.

16. Limited to hatchery and fish preserves.

17. Mineral uses:

- a. shall meet the standards in K.C.C. chapter 21A.22;
- b. shall be dependent upon a shoreline location;
- c. shall avoid and mitigate ((adverse)) impacts to the shoreline environment during the course of mining and reclamation to achieve no net loss of shoreline ecological

4615 function. In determining whether there will be no net loss of shoreline ecological  
4616 function, the evaluation may be based on the final reclamation required for the site.  
4617 Preference shall be given to mining proposals that result in the creation, restoration, or  
4618 enhancement of habitat for priority species;

4619 d. shall provide for reclamation of disturbed shoreline areas to achieve  
4620 appropriate ecological functions consistent with the setting;

4621 e. may be allowed within the active channel of a river only as follows:

4622 (1) removal of specified quantities of sand and gravel or other materials at  
4623 specific locations will not adversely affect the natural processes of gravel transportation  
4624 for the river system as a whole;

4625 (2) the mining and any associated ~~((permitted))~~ allowed activities will not  
4626 have ~~((significant adverse))~~ impacts to habitat for priority species nor cause a net loss of  
4627 ecological functions of the shoreline; and

4628 (3) if no review has been previously conducted under this subsection C.17.e.,  
4629 before renewing, extending, or reauthorizing gravel bar and other in-channel mining  
4630 operations in locations where they have previously been conducted, the department shall  
4631 require compliance with this subsection C.17.e. If there has been prior review, the  
4632 department shall review previous determinations comparable to the requirements of this  
4633 section C.17.e. to ensure compliance with this subsection under current site conditions;  
4634 and

4635 f. shall comply with K.C.C. 21A.25.190.

4636 18. Only water-dependent recreational uses are allowed, except for public parks  
4637 and trails, in the ~~((H))~~high ~~((F))~~intensity shoreline environment and shall meet the  
4638 standards in K.C.C. 21A.25.140 for public access and K.C.C. 21A.25.150 for recreation.

4639 19. Water-dependent and water-enjoyment recreational uses are allowed in the  
4640 ~~((R))~~residential, ~~((R))~~rural, and ~~((F))~~forestry shoreline environments and shall meet the  
4641 standards in K.C.C. 21A.25.140 for public access and K.C.C. 21A.25.150 for recreation.

4642 20. In the ~~((C))~~conservancy shoreline environment, only the following  
4643 recreation uses are allowed and shall meet the standards in K.C.C. 21A.25.140 for public  
4644 access and K.C.C. 21A.25.150 for recreation:

- 4645 a. parks; and
- 4646 b. trails.

4647 21. In the ~~((N))~~natural shoreline environment, only passive and low-impact  
4648 recreational uses are allowed.

4649 22. Single detached residences shall be located outside of the ~~((aquatic area  
4650 buffer))~~ riparian area and set back from the ordinary high water mark to the maximum  
4651 extent practical.

4652 23. Only allowed as part of a water-dependent shoreline mixed-use development  
4653 where water-dependent uses comprise more than half of the square footage of the  
4654 structures on the portion of the site within the shoreline jurisdiction.

4655 24. Residential accessory uses shall meet the following standards:

- 4656 a. docks, piers, moorage, buoys, floats, or launching facilities shall comply  
4657 with the standards in K.C.C. 21A.25.180;

4658                    b. residential accessory structures located within the ((~~aquatic area buffer~~))  
4659     riparian area shall be limited to a total footprint of one-hundred fifty square feet; and

4660                    c. accessory structures shall be sited to preserve visual access to the shoreline  
4661     to the maximum extent practical.

4662                    25. New highway and street construction is allowed only if there is no feasible  
4663     alternate location. Only low-intensity transportation infrastructure is allowed in the  
4664     ((N))natural environment.

4665                    26. Utility facilities are subject to the standards in K.C.C. 21A.25.260.

4666                    27. Only bed and breakfast guesthouses.

4667                    28. Only in a marina.

4668                    29. Transportation facilities are subject to the standards in K.C.C. 21A.25.280.

4669                    30. Only solid waste transfer stations and subject to K.C.C. 21A.25.260.

4670                    SECTION 96. Ordinance 16985, Section 32, as amended, and K.C.C.

4671     21A.25.110 are hereby amended to read as follows:

4672                    An applicant for an aquaculture facility shall use the sequential measures in  
4673     K.C.C. 21A.25.080. The following standards apply to aquaculture:

4674                    A. Unless the applicant demonstrates that the substrate modification will result in  
4675     an increase in native habitat diversity, aquaculture that involves little or no substrate  
4676     modification shall be given preference over aquaculture that involves substantial  
4677     substrate modification and the degree of proposed substrate modification shall be limited  
4678     to the maximum extent practical.

4679                    B. The installation of submerged structures, intertidal structures and floating  
4680     structures shall be limited to the maximum extent practical.

4681 C. Aquaculture proposals that involve substantial substrate modification or  
4682 sedimentation through dredging, trenching, digging, mechanical clam harvesting, or other  
4683 similar mechanisms, shall not be allowed in areas where the proposal would adversely  
4684 impact critical saltwater or critical freshwater habitats.

4685 D. Aquaculture activities that after implementation of mitigation measures would  
4686 have a significant adverse impact on natural, dynamic shoreline processes, or that would  
4687 result in a net loss of shoreline ecological functions shall be prohibited.

4688 E. Aquaculture should not be located in areas that will result in significant  
4689 conflicts with navigation or other water-dependent uses.

4690 F. Aquaculture facilities shall be designed, located, and managed to prevent the  
4691 spread of diseases to native aquatic life or the spread of new nonnative species.

4692 G. Aquaculture practices shall be designed to minimize use of artificial chemical  
4693 substances and shall use chemical compounds that are least persistent and have the least  
4694 impact on plants and animals. Herbicides and pesticides shall be used only in  
4695 conformance with state and federal standards and to the minimum extent needed for the  
4696 health of the aquaculture activity.

4697 H. Noncommercial native salmon net pen facilities that involve minimal  
4698 supplemental feeding and limited use of chemicals or antibiotics as provided in  
4699 subsection G. of this section may be located in King County marine waters if they are  
4700 consistent with subsections S. and Y. of this section and are:

- 4701 1. Native salmon net pens operated by Indian tribes with treaty fishing rights;  
4702 2. For the limited penned cultivation of wild salmon stocks during a limited  
4703 portion of their lifecycle to enhance restoration of native stocks; or

4704           3. For rearing to adulthood in order to harvest eggs as part of a captive brood  
4705 stock recovery program for endangered species.

4706           I. If uncertainty exists regarding potential impacts of a proposed aquaculture  
4707 activity and for all experimental aquaculture activities, unless otherwise provided for, the  
4708 department may require baseline and periodic operational monitoring by a county-  
4709 approved consultant, at the applicant's expense, and shall continue until adequate  
4710 information is available to determine the success of the project and the magnitude of any  
4711 probable ((significant)) adverse environmental impacts. Permits for such activities shall  
4712 include specific performance measures and provisions for adjustment or termination of  
4713 the project at any time if monitoring indicates ((significant,)) adverse environmental  
4714 impacts that cannot be adequately mitigated.

4715           J. Aquaculture developments approved on an experimental basis shall not exceed  
4716 five acres in area, except land-based projects and anchorage for floating systems, and  
4717 three years in duration. The department may issue a new permit to continue an  
4718 experimental project as many times as it determines is necessary and appropriate.

4719           K. The department may require aquaculture operations to carry liability insurance  
4720 in an amount commensurate with the risk of injury or damage to any person or property  
4721 as a result of the project. Insurance requirements shall not be required to duplicate  
4722 requirements of other agencies.

4723           L. If aquaculture activities are authorized to use public facilities, such as boat  
4724 launches or docks, King County may require the applicant to pay a portion of the cost of  
4725 maintenance and any required improvements commensurate with the use of those  
4726 facilities.

4727 M. New aquatic species that are not previously cultivated in Washington state  
4728 shall not be introduced into King County saltwaters or freshwaters without prior written  
4729 approval of the Director of the Washington state Department of Fish and Wildlife and the  
4730 Director of the Washington state Department of Health. This prohibition does not apply  
4731 to((÷)) Pacific, Olympia, Kumomoto, Belon<sub>2</sub> or Virginica oysters; Manila, Butter, or  
4732 Littleneck clams; or Geoduck clams.

4733 N. Unless otherwise provided in the shoreline permit issued by the department,  
4734 repeated introduction of an approved organism after harvest in the same location shall  
4735 require approval by the county only at the time the initial aquaculture use permit is  
4736 issued. Introduction, for purposes of this section, shall mean the placing of any aquatic  
4737 organism in any area within the waters of King County regardless of whether it is a native  
4738 or resident organism within the county and regardless of whether it is being transferred  
4739 from within or without the waters of King County.

4740 O. For aquaculture projects, overwater structures shall be allowed only if  
4741 necessary for the immediate and regular operation of the facility. Overwater structures  
4742 shall be limited to the storage of necessary tools and apparatus in containers of not more  
4743 than three feet in height, as measured from the surface of the raft or dock.

4744 P. Except for the sorting or culling of the cultured organism after harvest and the  
4745 washing or removal of surface materials or organisms before or after harvest, no  
4746 processing of any aquaculture product shall occur in or over the water unless specifically  
4747 approved by permit. All other processing and processing facilities shall be located  
4748 landward of the ordinary high water mark.

4749 Q. Aquaculture wastes shall be disposed of in a manner that will ensure strict

4750 compliance with all applicable governmental waste disposal standards, including, but not  
4751 limited to, the Federal Clean Water Act, Section 401, and chapter 90.48 RCW, Water  
4752 Pollution Control. No garbage, wastes, or debris shall be allowed to accumulate at the  
4753 site of any aquaculture operation.

4754 R. Unless approved in writing by the National Marine Fisheries Service or the  
4755 U.S. Fish and Wildlife Service, predator control shall not involve the killing or  
4756 harassment of birds or mammals. Approved controls include, but are not limited to,  
4757 double netting for seals, overhead netting for birds, and three-foot high fencing or netting  
4758 for otters. The use of other nonlethal, nonabusive predator control measures shall be  
4759 contingent upon receipt of written approval from the National Marine Fisheries Service  
4760 or the U.S. Fish and Wildlife Service, as required.

4761 S. Finfish net pens and rafts shall meet the following criteria in addition to the  
4762 other applicable regulations of this section:

4763 1. Finfish net pens shall not be located in Quartermaster Harbor. For the  
4764 purposes of this subsection, "Quartermaster Harbor" means the area of Puget Sound north  
4765 of a straight line drawn from the southwest tip of Vashon-Maury Island, which is Piner  
4766 Point, to the southeast tip of Vashon-Maury Island, which is Neill Point;

4767 2. Finfish net pens shall meet, at a minimum, state approved administrative  
4768 guidelines for the management of net pen cultures. In the event there is a conflict in  
4769 requirements, the more restrictive requirement shall prevail;

4770 3. Finfish net pens shall not occupy more than two surface acres of water area,  
4771 excluding booming and anchoring requirements. Anchors that minimize disturbance to  
4772 substrate, such as helical anchors, shall be employed. Such operations shall not use

4773 chemicals or antibiotics;

4774           4. Aquaculture proposals that include new or added net pens or rafts shall not be  
4775 located closer than one nautical mile to any other aquaculture facility that includes net  
4776 pens or rafts. The department may authorize a lesser distance if the applicant  
4777 demonstrates to the satisfaction of the department that the proposal will be consistent  
4778 with the environmental and aesthetic policies and objectives of this chapter and the  
4779 shoreline master program. The applicant shall demonstrate to the satisfaction of the  
4780 department that the cumulative impacts of existing and proposed operations would not be  
4781 contrary to the policies and regulations of the program;

4782           5. Net cleaning activities shall be conducted on a frequent enough basis so as  
4783 not to violate state water quality standards. When feasible, the cleaning of nets and other  
4784 apparatus shall be accomplished by air drying, spray washing, or hand washing; and

4785           6. In the event of a significant fish kill at the site of a net pen facility, the finfish  
4786 aquaculture operator shall submit a timely report to public health – Seattle & King  
4787 County, environmental health division, and the department of local services, permitting  
4788 division, stating the cause of death and shall detail remedial actions to be implemented to  
4789 prevent reoccurrence.

4790           T. All floating and submerged aquaculture structures and facilities in navigable  
4791 waters shall be marked in accordance with United States Coast Guard requirements.

4792           U. The rights of treaty tribes to aquatic resources within their usual and  
4793 accustomed areas shall be addressed through direct coordination between the applicant  
4794 and the affected Indian tribes through the permit review process.

4795           V. Aquaculture structures and equipment shall be of sound construction and shall

4796 be so maintained. Abandoned or unsafe structures and equipment shall be removed or  
4797 repaired promptly by the owner. Where any structure might constitute a potential hazard  
4798 to the public in the future, the department shall require the posting of a bond  
4799 commensurate with the cost of removal or repair. The department may abate an  
4800 abandoned or unsafe structure in accordance with K.C.C. Title 23.

4801 W. Aquaculture shall not be approved where it will adversely impact eelgrass and  
4802 macroalgae.

4803 X. Commercial salmon net pens and nonnative marine finfish aquaculture are  
4804 prohibited.

4805 Y. Finfish net pens shall be consistent with the applicable aquaculture regulations  
4806 in this section and shall meet the following criteria and requirements:

4807 1. Each finfish net pen application shall provide a current, peer-reviewed  
4808 science review of environmental issues related to finfish net pen aquaculture;

4809 2. The department shall only approve a finfish net pen application if the  
4810 department determines the scientific review demonstrates:

4811 a. that the project construction and activities will achieve no net loss of  
4812 ecological function in a manner that has no ((~~significant~~)) adverse short-term impact and  
4813 no documented adverse long-term impact to applicable elements of the environment,  
4814 including, but not limited to, habitat for native salmonids, water quality, critical saltwater  
4815 or critical freshwater habitat, eel grass beds, other aquaculture, other native species, the  
4816 benthic community below the net pen or other environmental attributes; and

4817 b. that the finfish net pen does not involve significant risk of cumulative  
4818 adverse effects, including, but not limited to, risk of interbreeding with wild salmon or

4819 reduction of genetic fitness of wild stocks, parasite or disease transmission, or other  
4820 adverse effects on native species or threatened or endangered species and their habitats;

4821 3. The department's review shall:

4822 a. include an assessment of the risk to endangered species, non-endangered  
4823 species, and other biota that could be affected by the finfish net pen; and

4824 b. evaluate and model water quality impacts utilizing current information,  
4825 technology, and assessment models. The project proponent shall be financially  
4826 responsible for this water quality assessment;

4827 4. Finfish net pens shall be designed, constructed and maintained to prevent  
4828 escapement of fish in all foreseeable circumstances, including, but not limited to, tide,  
4829 wind and wave events of record, floating and submerged debris, and tidal action;

4830 5. Finfish net pens shall not be located:

4831 a. within three hundred feet of an area containing eelgrass or a kelp bed;  
4832 b. within one thousand five hundred feet of an ordinary high water mark; or  
4833 c. in a designated Washington state Department of Natural Resources aquatic  
4834 reserve;

4835 6. A finfish net pen may not be used to mitigate the impact of a development  
4836 proposal; and

4837 7. For finfish net pens that are not noncommercial native salmon net pens, the  
4838 conditional use permit for the net pen shall be renewed every five years. An updated  
4839 scientific review shall be conducted as part of the renewal and shall include a new risk  
4840 assessment and evaluation of the impact of the operation of the finfish net pen during the  
4841 previous five years.

4842 Z. Geoduck aquaculture shall be consistent with WAC 173-26-241(3)(b).

4843 SECTION 97. Ordinance 3688, Section 415, as amended, and K.C.C.

4844 21A.25.150 are hereby amended to read as follows:

4845 Recreational development (~~((must))~~) shall meet the following standards:

4846 A. The recreational development (~~((must be))~~) is permitted in the underlying zone;

4847 B. Recreational uses in the (~~((N))~~)natural shoreline environment (~~((must))~~) shall be

4848 water-oriented;

4849 C. Swimming areas shall be separated from boat launch areas and marinas, to the

4850 maximum extent practical;

4851 D. The development of underwater sites for sport diving shall not:

4852 1. Take place at depths of greater than eighty feet;

4853 2. Constitute a navigational hazard; and

4854 3. Be located in areas where the normal waterborne traffic would constitute a

4855 hazard to those people who may use such a site;

4856 E. The construction of swimming facilities, docks, piers, moorages, buoys, floats,<sub>2</sub>

4857 and launching facilities below the ordinary high water mark shall be governed by the

4858 regulations relating to docks, piers, moorage, buoys, floats<sub>2</sub> or launching facility

4859 construction in K.C.C. 21A.25.180;

4860 F. Public boat launching facilities or marinas shall be governed by K.C.C.

4861 21A.25.120;

4862 G. Campgrounds in the (~~((N))~~)natural shoreline environment shall meet the

4863 following conditions:

4864 1. Campsites shall be located outside the shoreline jurisdiction if possible, and if  
4865 not, be located outside of critical area((s)) and associated buffers;

4866 2. Restrooms and parking shall be located outside the shoreline jurisdiction; and

4867 3. Removal of vegetation shall be limited to the maximum extent practical;

4868 H. Public contact with unique and fragile areas shall be permitted where it is  
4869 possible without destroying the natural character of the area;

4870 I. Water viewing, nature study, recording, and viewing shall be accommodated  
4871 by open space, platforms, benches, or shelter, consistent with public safety and security;

4872 J. Public recreation shall be provided on county-owned lands consistent with this  
4873 chapter unless the director determines public recreation is not compatible with other uses  
4874 on the site or will create a public safety risk; and

4875 K. To the maximum extent practical, proposals for non water oriented active  
4876 recreation facilities shall be located outside of the shoreline jurisdiction and shall not be  
4877 permitted where the non((-))water oriented active recreation facility would have an  
4878 adverse impact on critical saltwater or critical freshwater habitats.

4879 SECTION 98. Ordinance 16985, Section 39, as amended, and K.C.C.  
4880 21A.25.160 are hereby amended to read as follows:

4881 A. The shoreline modification table in this section determines whether a specific  
4882 shoreline modification is allowed within each of the shoreline environments. The  
4883 shoreline environment is located on the vertical column and the specific use is located on  
4884 the horizontal row of the table. The specific modifications are grouped by the shoreline  
4885 modification categories in WAC 173-26-231. The table should be interpreted as follows:

4886           1. If the cell is blank in the box at the intersection of the column and the row,  
4887 the modification is prohibited in that shoreline environment;

4888           2. If the letter "P" appears in the box at the intersection of the column and the  
4889 row, the modification may be allowed within the shoreline environment;

4890           3. If the letter "C" appears in the box at the intersection of the column and the  
4891 row, the modification may be allowed within the shoreline environment subject to the  
4892 shoreline conditional use review procedures specified in K.C.C. 21A.44.100;

4893           4. If a number appears in the box at the intersection of the column and the row,  
4894 the modification may be allowed subject to the appropriate review process indicated in  
4895 this section and the specific development conditions indicated with the corresponding  
4896 number immediately following the table, and only if the underlying zoning allows the  
4897 modification. If more than one number appears at the intersection of the column and  
4898 row, both numbers apply;

4899           5. If more than one letter-number combination appears in the box at the  
4900 intersection of the column and the row, the modification is allowed within that shoreline  
4901 environment subject to different sets of limitations or conditions depending on the review  
4902 process indicated by the letter, the specific development conditions indicated in the  
4903 development condition with the corresponding number immediately following the table;

4904           6. A shoreline modification may be allowed in the aquatic environment only if  
4905 that shoreline modification is allowed in the adjacent shoreland environment; and

4906           7. This section does not authorize a shoreline modification that is not allowed  
4907 by the underlying zoning, but may add additional restrictions or conditions or prohibit  
4908 specific modifications within the shoreline jurisdiction. All shoreline modifications in

4909 the shoreline jurisdiction shall comply with all relevant county code provisions and with

4910 the King County shoreline master program.

4911 B. Shoreline modifications.

|                                                                             | <b>High<br/>Inten<br/>sity</b> | <b>Resident<br/>ial</b> | <b>Rur<br/>al</b> | <b>Conserv<br/>ancy</b> | <b>Resour<br/>ce</b> | <b>Fores<br/>try</b> | <b>Natu<br/>ral</b> | <b>Aqua<br/>tic</b> |

4912 C. Development conditions.

4913 1. New and replacement shoreline stabilization, including bulkheads, shall meet  
4914 the standards in K.C.C. 21A.25.170((;)).

4915 2.a. Flood protection facilities shall be consistent with the standards in K.C.C.  
4916 chapter 21A.24; goals, objectives, guiding principles, and policies of the 2024 King  
4917 County Flood Management Plan; and the Integrated ((~~Stream~~)) Streambank Protection  
4918 Guidelines (Washington state ((~~the~~)) Departments of Fish and Wildlife, Ecology, and  
4919 Transportation, ((2003)) 2002). New structural flood hazard protection measures are  
4920 allowed in the shoreline jurisdiction only when the applicant demonstrates by a scientific  
4921 and engineering analysis that the structural measures are necessary to protect existing  
4922 development, that nonstructural measures are not feasible and that the impact on  
4923 ecological functions and priority species and habitats can be successfully mitigated ((~~so~~  
4924 as)) to assure no net loss of shoreline ecological functions. New flood protection  
4925 facilities designed as shoreline stabilization shall comply with the standards in K.C.C.  
4926 21A.25.170.

4927 b. Relocation, replacement, or expansion of existing flood control facilities  
4928 within the ((~~N~~)) natural shoreline environment are allowed, subject to the requirements of  
4929 the King County Flood Management Plan and consistent with the ((~~Washington State~~  
4930 ~~Aquatic Guidelines Program's~~)) Integrated Streambank Protection Guidelines and  
4931 bioengineering techniques used to the maximum extent practical. New facilities would

4932 only be allowed consistent with an approved watershed resources inventory area (WRIA)  
4933 salmon recovery plan under chapter 77.85 RCW.

4934 3. Docks, piers, moorage, buoys, floats, or launching facilities shall comply with  
4935 the standards in K.C.C. 21A.25.180((~~3~~)).

4936 4.a. Filling shall comply with the standards in K.C.C. 21A.25.190.

4937 b. A shoreline conditional use permit is required to:

4938 (1) Place fill waterward of the ordinary high water mark for any use except  
4939 ecological restoration or for the maintenance and repair of flood protection facilities; and

4940 (2) Dispose of dredged material within shorelands or wetlands within a  
4941 channel migration zone;

4942 c. ~~((F))~~fill shall not be placed in critical saltwater or critical freshwater habitats  
4943 except when all of the following conditions are met:

4944 (1) the public's need for the proposal is clearly demonstrated and the proposal  
4945 is consistent with protection of the public trust, ~~((as embodied))~~ in accordance with RCW  
4946 90.58.020;

4947 (2) avoidance of impacts to critical saltwater or critical freshwater habitats by  
4948 an alternative alignment or location is not feasible or would result in unreasonable and  
4949 disproportionate cost to accomplish the same general purpose;

4950 (3) the project including any required mitigation, will result in no net loss of  
4951 ecological functions associated with critical saltwater or critical freshwater habitats; and

4952 (4) the project is consistent with the state's interest in resource protection and  
4953 species recovery; and

4954 d. In a channel migration zone, any filling shall protect shoreline ecological  
4955 functions, including channel migration.

4956 5.a. Breakwaters, jetties, groins, and weirs:

4957 (1) are only allowed where necessary to support water dependent uses, public  
4958 access, approved shoreline stabilization, or other public uses, as determined by the  
4959 director;

4960 (2) are not allowed in the Maury Island Aquatic Reserve except as part of a  
4961 habitat restoration project or as an alternative to construction of a shoreline stabilization  
4962 structure;

4963 (3) shall not intrude into or over critical saltwater or critical freshwater  
4964 habitats except when all of the following conditions are met:

4965 (a) the public's need for the structure is clearly demonstrated and the  
4966 proposal is consistent with protection of the public trust, ((as embodied)) in accordance  
4967 with RCW 90.58.020;

4968 (b) avoidance of impacts to critical saltwater or critical freshwater habitats  
4969 by an alternative alignment or location is not feasible or would result in unreasonable and  
4970 disproportionate cost to accomplish the same general purpose;

4971 (c) the project including any required mitigation, will result in no net loss of  
4972 ecological functions associated with critical saltwater or critical freshwater habitats; and

4973 (d) the project is consistent with the state's interest in resource protection  
4974 and species recovery.

4975                   b. Groins are only allowed as part of a restoration project sponsored or  
4976 cosponsored by a public agency that has natural resource management as a primary  
4977 function.

4978                   c. A conditional shoreline use permit is required, except for structures installed  
4979 to protect or restore shoreline ecological functions.

4980                   6. Excavation, dredging, and filling shall comply with the standards in K.C.C.  
4981 21A.25.190. A shoreline conditional use permit is required to dispose of dredged  
4982 material within shorelands, wetlands, or side channels within a channel migration zone.

4983                   7.~~((a. If the department determines))~~ Limited to projects where the primary  
4984 purpose is ~~((restoration))~~ to restore or enhance of the natural character and ecological  
4985 functions of the shoreline, ~~((a shoreline habitat and natural systems enhancement))~~ as  
4986 follows:

4987                   a. the project may include shoreline modification of vegetation, removal of  
4988 nonnative or invasive plants, and shoreline stabilization, including the installation of  
4989 large ~~((woody debris))~~ wood, dredging, and filling. Mitigation actions identified through  
4990 biological assessments required by the National Marine Fisheries Services and applied to  
4991 flood hazard mitigation projects may include shoreline modifications of vegetation,  
4992 removal of nonnative or invasive plants, and shoreline stabilization, including the  
4993 installation of large ~~((woody debris))~~ wood, dredging, and filling. Mitigation actions  
4994 identified through biological assessments required by the National Marine Fisheries  
4995 Services and applied to flood hazard mitigation projects may include shoreline  
4996 modifications of vegetation, removal of nonnative or invasive plants, and shoreline

4997 stabilization, including the installation of large ~~((woody debris))~~ wood, dredging, and  
4998 filling~~((:))~~;

4999 b. Within the ~~((u))~~Urban ~~((g))~~Growth ~~((a))~~Area, the county may grant relief  
5000 from shoreline master program development standards and use regulations resulting from  
5001 shoreline restoration projects, consistent with criteria and procedures in WAC 173-27-  
5002 215~~((:))~~;

5003 c. A shoreline habitat and natural systems enhancement project shall provide a  
5004 net ecological benefit and increase in functions over the existing ecological and  
5005 functional conditions of the habitat project area; and

5006 d. A restoration or enhancement plan shall include:

5007 (1) an evaluation of the anticipated net change in ecological functions from  
5008 pre-project to post-project; and

5009 (2) a monitoring and reporting plan to demonstrate the gain of ecological  
5010 function.

5011 8. Within the critical area and critical area buffer, vegetation removal is subject  
5012 to K.C.C. chapter 21A.24.

5013 9. Except for forest practices conducted under K.C.C. 21A.25.130, existing  
5014 native vegetation located outside of the critical area and critical area buffer shall be  
5015 retained to the maximum extent practical. Within the critical area and critical area buffer,  
5016 vegetation removal is subject to K.C.C. chapter 21A.24.

5017 SECTION 99. Ordinance 16985, Section 46, as amended, and K.C.C.  
5018 21A.25.210 are hereby amended to read as follows:

5019           A. The expansion of a dwelling unit or residential accessory structure located in  
5020 the shoreline jurisdiction, if allowed under K.C.C. 21A.24.045, ~~((is subject to the~~  
5021 ~~following:~~

5022           ~~A.))~~ shall require a shoreline variance ~~((f))~~ if the proposed expansion ~~((will))~~:

5023           1. ~~((f))~~ Results in a total cumulative expansion of the dwelling unit and  
5024 accessory structures ~~((of))~~ by more than one thousand square feet ~~((, a shoreline variance~~  
5025 ~~is required; and~~

5026           ~~B. If the site has an approved rural stewardship plan under K.C.C. 21A.24.055,~~  
5027 ~~the expansion is not allowed))~~;

5028           2. Is within thirty-five feet of the ordinary high water mark; or

5029           3. Is between thirty-five feet and fifty feet of the ordinary high water mark and  
5030 the expansion extending towards the ordinary high water mark is greater than three  
5031 hundred square feet.

5032           SECTION 100. Ordinance 11168, Section 3 as amended, and K.C.C. 21A.30.045  
5033 are hereby amended to read as follows:

5034           A. ~~((To achieve the maximum density allowances using))~~ The livestock densities  
5035 in K.C.C. 21A.30.040 may be achieved through a livestock management plan component  
5036 of a farm management plan ~~((, the))~~. A livestock management plan ~~((must meet the~~  
5037 ~~following criteria))~~ component shall:

5038           1. ~~((The plan is))~~ Comply with the requirements of K.C.C. 21A.24.051 for farm  
5039 management plans;

5040           2. Be developed as part of a program authorized or approved by King County.  
5041 Certified Washington state Department of Ecology nutrient management plans that are

5042 consistent with all of the criteria of this section may substitute for a livestock  
5043 ~~((management component of a farm))~~ management plan component for commercial dairy  
5044 farms. Commercial dairy farms that do not have approved nutrient management plans  
5045 ~~((must))~~ shall meet the requirements of K.C.C 21A.30.060;

5046 ~~((2. The plan))~~ 3. ~~((i))~~ Include ~~((s))~~ site-specific best management ~~((measures))~~  
5047 practices for minimizing nonpoint pollution from agricultural activities and for managing  
5048 wetland ~~((and))~~, wetland buffers, aquatic areas, and riparian areas, including, but not  
5049 limited to:

- 5050 a. livestock watering;
- 5051 b. grazing and pasture management;
- 5052 c. confinement area management;
- 5053 d. manure management; and
- 5054 e. exclusion of animals from aquatic areas ~~((and their buffers))~~, riparian areas,
- 5055 and wetlands and ~~((their))~~ associated buffers with the exception of grazed wet  
5056 meadows~~((s))~~;

5057 ~~((3. The plan is))~~ 4. Be implemented within a timeframe established in the plan  
5058 and maintained so that nonpoint pollution attributable to livestock-keeping is minimized;  
5059 and

5060 ~~((4. A))~~ 5. Include a monitoring plan ~~((may be))~~, if required ~~((as part of the~~  
5061 ~~livestock management component of a farm management plan))~~, to demonstrate that there  
5062 is no significant impact to water quality and ~~((salmonid fisheries))~~ fish habitat.  
5063 Monitoring results shall be made available to the King County agriculture program.

5064 B. The livestock ~~((management component of a farm))~~ management plan  
5065 component shall, at a minimum:

5066 1.a. ~~((Generally seek to achieve a twenty-five foot buffer of))~~ Establish grazing  
5067 area buffers with diverse, mature vegetation between grazing areas and ~~((the ordinary~~  
5068 ~~high water mark of all type S and F aquatic areas and))~~ critical areas as follows:

5069 (1) forty feet from the ~~((wetland))~~ edge of a ~~((ny))~~ category I, II, or III  
5070 wetland, ~~((with the))~~ except ~~((ion of))~~ grazed wet meadows ~~((, using buffer averaging~~  
5071 ~~where necessary to accommodate existing structures.))~~;

5072 (2) forty feet from a type S or F aquatic area;

5073 (3) thirty-five feet from a type N aquatic area;

5074 (4) twenty feet from the edge of a category IV wetland, except grazed wet  
5075 meadows;

5076 (5) no minimum from grazed wet meadows; and

5077 (6) the clearing of lands for new grazing areas shall not occur in wetlands,  
5078 wetland buffers, or riparian areas that contain predominantly native forest overstory,  
5079 shrubs, or herbaceous layer. New grazing areas shall comply with the riparian area  
5080 widths, critical area buffers, and applicable regulations in K.C.C. chapter 21A.24.

5081 b. The ~~((livestock management component of a farm management plans may~~  
5082 ~~vary the))~~ width of the grazing area buffer ~~((of an aquatic area or wetland,))~~ and the time  
5083 and duration of animal exclusion throughout the year ~~((, according to guidelines agreed~~  
5084 ~~upon by King County and the King Conservation District))~~ may be modified consistent  
5085 with the public rule established to implement farm management plans. The ~~((guidelines))~~  
5086 public rule may ~~((support a))~~ allow for different grazing area buffer widths based on both

5087 the nature of the farm operation and the function and sensitivity of the aquatic area or  
5088 wetland.

5089 c. The livestock management plan ~~((must))~~ component shall include best  
5090 management practices that avoid having manure accumulate in or within ten feet of type  
5091 ~~((N or)) O ((waters))~~ aquatic areas. ~~((Forested lands being cleared for grazing areas shall~~  
5092 ~~comply with the critical area buffers in K.C.C. chapter 21A.24))~~);

5093 2. ~~((Assure))~~ Ensure that drainage ditches on the site do not channel animal  
5094 waste to aquatic areas and wetlands;

5095 3. Achieve an additional twenty~~((foot buffer))~~ feet of diverse, mature  
5096 vegetation beyond the grazing area buffers identified in subsection B.1. of this section  
5097 downslope of any confinement areas within two hundred feet of type S~~((and))~~, F  
5098 ~~((waters))~~, and N aquatic areas. This requirement may be waived for existing  
5099 confinement areas on lots of two and one-half acres or less in size if:

5100 a. a minimum buffer of ~~((twenty-five))~~ forty feet of diverse, mature vegetation  
5101 is achieved;

5102 b. manure within the confinement area is removed daily during the winter  
5103 season from October 15 to April 15, and stored in accordance with K.C.C.  
5104 21A.30.060.D.; and

5105 c. additional best management practices~~((, as recommended by the King~~  
5106 ~~Conservation District,))~~ in an approved farm management plan are implemented~~((;))~~ and  
5107 maintained; and

5108 4. Include a schedule for implementation.

5109 C. Any deviation from the manure management standards ~~((must))~~ shall be  
5110 addressed in ~~((a))~~ the livestock ~~((management component of a farm))~~ management plan  
5111 component.

5112 D. ~~((A copy of the final plans shall be submitted to the department of natural~~  
5113 ~~resources and parks within sixty days of completion.~~

5114 E. ~~The farm management plan approved by the department of natural resources~~  
5115 ~~and parks may be appealed to the hearing examiner in accordance with K.C.C. 20.22.040~~  
5116 ~~and 20.22.080. Appeals may be filed only by the property owner or four members of the~~  
5117 ~~King County agriculture commission. Any farm management plan not appealed shall~~  
5118 ~~constitute prima facie evidence of compliance with the regulatory provisions of K.C.C.~~  
5119 ~~9.12.035.))~~ Properties operating subject to an existing livestock management plan  
5120 component based on the standards in effect before the effective date of this ordinance  
5121 shall be deemed to have satisfied the standards of this section.

5122 E. For the purposes of this section, in aquatic areas and riparian areas, distances  
5123 shall be measured from the ordinary high water mark of the adjacent aquatic area or from  
5124 the top of the bank if the ordinary high water mark cannot be identified.

5125 SECTION 101. Ordinance 10870, Section 534, as amended, and K.C.C.

5126 21A.30.060 are hereby amended to read as follows:

5127 ~~((Property owners with farms containing either large))~~ A. The livestock ~~((at))~~  
5128 densities ~~((greater than one animal unit per two acres, or small livestock at densities~~  
5129 ~~greater than five animals per acre, or both, are not required to follow an livestock))~~  
5130 identified in K.C.C. 21A.30.040 without a farm management plan ((if the owners  
5131 adhere)) are subject to ~~((the management standards in subsections A. through G. of))~~ this

5132 section. This section applies only if farm practices do not result in violation of any  
5133 federal, state, or local water quality standards.

5134 ~~((A.))~~ B. To minimize livestock access to aquatic areas, property owners shall  
5135 utilize the following for livestock watering ~~((options))~~:

5136 1. The preferred option, which is a domestic water supply, stock watering pond,  
5137 roof runoff collection system, or approved pumped supply from ~~((the))~~ aquatic areas so  
5138 that livestock are not required to enter aquatic areas for their water supply.

5139 2.a. Livestock access to type S~~((and))~~, F ~~((waters, including their buffers))~~, and  
5140 N aquatic areas and riparian areas shall be limited to crossing and watering points that  
5141 have been addressed by a crossing or watering point plan designed to Natural Resource  
5142 Conservation Services or King Conservation District specifications that prevent free  
5143 access along the length of the aquatic areas.

5144 ~~((a.))~~ b. Fencing shall be used as necessary to prevent livestock access to type  
5145 S ~~((and))~~, F ~~((waters))~~, and N aquatic areas.

5146 ~~((b.))~~ c. Bridges may be used ~~((, in accordance with K.C.C. chapter 21A.24, in  
5147 lieu of))~~ in place of crossings in accordance with K.C.C. chapter 21A.24. Piers and  
5148 abutments shall not be placed within the ordinary high water mark or top-of-bank,  
5149 whichever is greater. Bridges shall be designed to allow free flow of flood waters and  
5150 shall not diminish flood carrying capacity. These bridges may be placed without a  
5151 ~~((county))~~ building permit, but the permit waiver shall not constitute any assumption of  
5152 liability by the county with regard to such bridge or its placement. The waiver of a  
5153 ~~((county))~~ building permit ~~((requirements))~~ does not constitute a waiver from other  
5154 required agency permits.

5155           ~~((B-))~~ C.1. Existing grazing areas without a farm management plan and not  
5156 addressed by K.C.C. chapter 21A.24 shall maintain a ~~((vegetative))~~ grazing area buffer  
5157 ~~((of))~~ as follows:

5158           a. fifty feet from the ~~((wetland))~~ edge of a category I, II, or III wetland, except  
5159 ~~((those wetlands meeting the definition of))~~ grazed wet meadows~~((, or the ordinary high~~  
5160 ~~water mark of))~~;

5161           b. fifty feet from a type S ~~((or))~~, F ~~((water))~~, or N aquatic area;

5162           c. twenty-five feet from the edge of a category IV wetland, except grazed wet  
5163 meadows; and

5164           d. no minimum from grazed wet meadows.

5165           2. ~~((Forested))~~ The clearing of lands ~~((being cleared))~~ for new grazing areas  
5166 shall not occur in wetlands, wetland buffers, or riparian areas that contain predominantly  
5167 native forest overstory, shrub, or herbaceous layer, and shall comply with the riparian  
5168 area widths, critical area buffers, and applicable regulations in K.C.C. chapter 21A.24.

5169           3. ~~((The grazing area buffer may be reduced to twenty five feet where a twenty-~~  
5170 ~~five foot buffer of diverse, mature vegetation already exists. This buffer reduction may~~  
5171 ~~not be used when forested lands are being cleared for grazing areas.~~

5172           4.)) Fencing shall be used to establish and maintain the grazing area buffer  
5173 unless the buffer is otherwise impenetrable to livestock.

5174           ~~((5-))~~ 4. Fencing installed in accordance with the ~~((1990 Sensitive Area~~  
5175 ~~Ordinance before February 14, 1994))~~ standards in effect before January 1, 2005, at  
5176 setbacks other than those specified in subsection B.~~((1. and 2.))~~ of this section shall be  
5177 deemed to constitute compliance with those requirements.

5178           ~~((6.))~~ 5. Grazing areas within two hundred feet of a wetland or type S~~((or))~~, F  
5179 ~~((water or category I, II or III wetland))~~, or N aquatic area shall not be plowed during the  
5180 rainy season from October 1 through April 30.

5181           ~~((7.))~~ 6. Grazing areas may extend to the property line, provided that wetlands  
5182 and type S~~((or))~~, F ~~((waters and category I, II and III wetlands))~~, or N aquatic areas that  
5183 are located adjacent to the property line are ~~((buffered))~~ protected in accordance with  
5184 subsection ~~((B.1., 2. or 3.))~~ C. of this section.

5185           ~~((C.))~~ D.1. In addition to the grazing area buffers in subsection ~~((B.1. and 2.))~~ C.  
5186 of this section, confinement areas located within two hundred feet of any wetland, except  
5187 grazed wet meadows, or type S~~((or))~~, F, ~~((waters or category I, II or III, wetlands with the~~  
5188 exception of grazed wet meadows)) or N aquatic areas shall:

5189           a. have a twenty-foot-wide vegetative filter strip downhill from the  
5190 confinement area, consisting of heavy grasses or other ground cover with high stem  
5191 density and that may also include tree cover;

5192           b. not be located in ~~((the buffer of))~~ a wetland buffer or a riparian area of  
5193 ~~a~~((ny))~~ type S~~((or))~~, F ~~((water or any wetland buffer required by the critical areas~~  
5194 ~~ordinance))~~, or N aquatic area in effect at the time the confinement area is built, or within  
5195 fifty feet of ~~((the))~~ a wetland ~~((edge of any category I, II or III wetland))~~ or ~~((the ordinary~~  
5196 ~~high water mark of any))~~ type S~~((or))~~, F ~~((water))~~, or N aquatic area. Fencing shall be  
5197 used to establish and maintain the wetland buffer ~~((except where existing natural~~  
5198 ~~vegetation is sufficient to exclude))~~ or riparian area unless the area is otherwise  
5199 impenetrable to livestock ~~((from the buffer. Existing confinement areas that do not meet~~  
5200 ~~these requirements shall be modified as necessary to provide the buffers specified in this~~~~

5201 ~~section within five years of January 1, 2005, though the footprint of existing buildings~~  
5202 ~~need not be so modified~~)); and

5203 c. have roof drains of any buildings in the confinement area diverted away  
5204 from the confinement area.

5205 2. Confinement areas may extend to the property line((;)) if aquatic areas and  
5206 wetlands adjacent to the property line are buffered in accordance with ((~~K.C.C. this~~))  
5207 subsection C. of this section.

5208 ((~~D.~~)) E.1. Manure storage areas shall be managed as follows:

5209 a. Surface flows and roof runoff shall be diverted away from manure storage  
5210 areas;

5211 b. All manure stockpiled within two hundred feet uphill of ((~~any the ordinary~~  
5212 ~~high water mark of~~)) a wetland or type S ((~~or~~)), F ((~~water or the edge of a category I, II or~~  
5213 ~~III wetland~~)), or N aquatic area shall either be covered in a manner that excludes  
5214 precipitation and allows free flow of air to minimize fire danger or be placed in an  
5215 uncovered concrete bunker or manure lagoon or held for pickup in a dumpster, vehicle, or  
5216 other facility designed to prevent leachate from reaching any aquatic area or wetland.  
5217 Concrete bunkers shall be monitored quarterly for the first two years after installation,  
5218 then annually unless problems were identified in the first two years, in which case  
5219 quarterly monitoring shall continue and appropriate adjustments shall be made; and  
5220 c.(1) Manure shall not be stored in a((~~ny aquatic area buffer~~)) riparian area or  
5221 wetland buffer, with the exception of grazed ((~~or tilled~~)) wet meadows, unless there is no  
5222 other alternative on the property. Manure shall be stored in a location that avoids having  
5223 runoff from the manure enter aquatic areas or wetlands.

5224           (2) Manure piles shall not be closer than one hundred feet uphill from:  
5225           ~~((1))~~ (a) any wetland edge excluding grazed ~~((or tilled))~~ wet meadows;  
5226           ~~((2))~~ (b) the ordinary high water mark of any aquatic area; or  
5227           ~~((3))~~ (c) any ditch to which the topography would generally direct runoff  
5228 from the manure~~((; and))~~.

5229           ~~((4))~~ (3) The location may be reduced to no closer than fifty feet if the  
5230 manure pile is part of an active compost system that is located on an impervious surface  
5231 to prevent contact with the soil and includes a leachate containment system.

5232           2. Manure shall be spread on fields only during the growing season, and not on  
5233 saturated or frozen fields.

5234           ~~((F.))~~ F. For purposes of this section, "buffer maintenance" means allowing  
5235 vegetation in the grazing area buffer that provides shade for the aquatic area or acts as a  
5236 filter for storm~~((-))~~water entering the aquatic area, other than noxious weeds, to grow to  
5237 its mature height, though grasses in the buffer may be mowed but not grazed. Grading in  
5238 the buffer is allowed only for establishment of watering and crossing points, or for other  
5239 activities ~~((permitted))~~ in accordance with K.C.C. chapter 21A.24, with the appropriate  
5240 permits.

5241           ~~((F.))~~ G. Properties ~~((that have))~~ with existing fencing ~~((already))~~ installed at  
5242 distances other than those specified in these standards, and for which livestock  
5243 management farm plans have been developed based on the existing fencing locations,  
5244 shall be deemed to be in compliance with the fencing requirements of these standards~~((-~~  
5245 ~~Properties with or without a livestock management component of a farm management~~  
5246 ~~plan that complied with the fencing requirements in effect before January 1, 2005, shall~~

5247 ~~have five years from January 1, 2005, to meet the fencing requirements for aquatic areas~~  
5248 ~~that were exempt from fencing under ordinances in effect before January 1, 2005)), but~~  
5249 only if approved fencing is present for type S and F aquatic areas.

5250 ((G.)) H. Buffer areas shall not be subject to public access, use, or dedication by  
5251 reason of the establishment of such buffers.

5252 I. For the purposes of this section, in aquatic areas and riparian areas, distances  
5253 shall be measured from the ordinary high water mark of the adjacent aquatic area or from  
5254 the top of the bank if the ordinary high water mark cannot be identified.

5255 SECTION 102. Ordinance 15051, Section 228, and K.C.C. 21A.50.035 are  
5256 hereby amended to read as follows:

5257 A. A person who alters a critical area or buffer in violation of law shall undertake  
5258 corrective work in compliance with this chapter and K.C.C. ((chapter 23.08)) Title 23.  
5259 When feasible, corrective work shall include restoration of the critical area and associated  
5260 buffer. Corrective work shall be subject to all permits or approvals required for the type  
5261 of work undertaken. In addition, the violator shall be subject to all fees associated with  
5262 investigation of the violation and the need for corrective work.

5263 B. When a wetland or buffer is altered in violation of this title, restoration of the  
5264 wetland and associated buffer shall comply with the restoration standards in K.C.C.  
5265 21A.24.340.

5266 C. When an aquatic area or ((buffer)) riparian area is altered in violation of this  
5267 title, restoration of the ((stream and buffer)) aquatic area or riparian area shall comply  
5268 with the restoration standards in K.C.C. 21A.24.380.

5269 D. All corrective work shall be completed within the time specified in the  
5270 corrective work plan, but in no case later than one year from the date the corrective work  
5271 plan is approved by the department, unless the director authorizes a longer period. The  
5272 violator shall notify the department when restoration measures are installed and  
5273 monitoring is commenced.

5274 E. Any failure to satisfy corrective work requirements established by law or  
5275 condition including, but not limited to, the failure to provide a monitoring report within  
5276 thirty days after it is due or comply with other provisions of an approved corrective work  
5277 plan shall constitute a default, and the department may demand payment of any financial  
5278 guarantees or require other action authorized by K.C.C. Title 27A or other applicable  
5279 law.

5280 F. Reasonable access to the corrective work site shall be provided to King  
5281 County for the purpose of inspections during any monitoring period.

5282 SECTION 103. Ordinance 13332, Section 28, as amended, and K.C.C. 27.10.130  
5283 are hereby amended to read as follows:

5284 Fees for critical areas review, critical area designation, critical area alteration, flood  
5285 hazard certification and variances for floodplain development, or sea level rise risk area  
5286 shall be charged as follows:

|      |                                                   |            |
|------|---------------------------------------------------|------------|
| 5287 | A. Critical areas review                          |            |
| 5288 | 1. Critical area notice on title only             | \$423.00   |
| 5289 | 2. Nonresidential review, basic, per discipline   | \$2,327.00 |
| 5290 | 3. Nonresidential review, complex, per discipline | \$3,813.00 |
| 5291 | 4. Stewardship planning                           | \$3,390.00 |

|      |    |                                                                     |              |
|------|----|---------------------------------------------------------------------|--------------|
| 5292 | B. | Critical areas designations                                         |              |
| 5293 | 1. | Minimum fee per application                                         |              |
| 5294 | a. | <u>For sites less than 1 acres</u>                                  | \$1,438.00   |
| 5295 | b. | <u>For sites between 1 and 10 acres</u>                             | <u>\$TBD</u> |
| 5296 | c. | <u>For sites over 10 acres</u>                                      | <u>\$TBD</u> |
| 5297 | 2. | Fee per discipline if the parcel or parcels for which designations  |              |
| 5298 |    | are requested have one or more critical area, excepting critical    |              |
| 5299 |    | aquifer recharge, seismic hazard, or erosion hazard area            | \$1,061.00   |
| 5300 | 3. | Fee for resubmittal of critical area study, per discipline          | \$1,061.00   |
| 5301 | C. | Critical area alteration exception                                  |              |
| 5302 | 1. | Review, per discipline                                              | \$9,323.00   |
| 5303 | 2. | Base fee                                                            | \$3,390.00   |
| 5304 | 3. | Extension of approval                                               | \$1,906.00   |
| 5305 | 4. | If applications for a shoreline permit and critical area alteration |              |
| 5306 |    | exception are reviewed concurrently, the critical area alteration   |              |
| 5307 |    | exception application shall be charged fifty percent of the fees    |              |
| 5308 |    | required by this section.                                           |              |
| 5309 | D. | Floodplain development: flood hazard certificate review             |              |
| 5310 | 1. | Section A                                                           | \$423.00     |
| 5311 | 2. | Section B.1, FEMA floodway                                          | \$284.00     |
| 5312 | 3. | Section B.2                                                         | \$853.00     |
| 5313 | E. | Floodplain development inspection                                   | \$635.00     |
| 5314 | F. | Floodplain development review: floodway and channel migration zone  |              |

|      |    |                                                                                            |          |
|------|----|--------------------------------------------------------------------------------------------|----------|
| 5315 | 1. | Screening and verification                                                                 | \$423.00 |
| 5316 | 2. | Review of a request for FEMA floodway letter-of-map-amendment                              |          |
| 5317 |    | shall be charged at actual cost to the department including                                |          |
| 5318 |    | consultant costs, administrative costs and cost of review by other                         |          |
| 5319 |    | county departments and governmental agencies.                                              |          |
| 5320 | G. | Floodplain development review: mapped floodplain                                           | \$212.00 |
| 5321 | H. | Floodplain development review: unmapped floodplain                                         |          |
| 5322 | 1. | Qualitative floodplain study                                                               | \$212.00 |
| 5323 | 2. | Minor floodplain study                                                                     | \$284.00 |
| 5324 | 3. | Major floodplain study                                                                     | \$853.00 |
| 5325 | I. | Review of variances for development in a floodplain or sea level rise risk area or         |          |
| 5326 |    | for nonresidential elevation and dry floodproofing under K.C.C. 21A.24.228 shall be        |          |
| 5327 |    | charged at actual cost to the department including consultant costs, administrative costs, |          |
| 5328 |    | and cost of review by other county departments and governmental agencies.                  |          |
| 5329 |    | <u>SECTION 104.</u> The following are hereby repealed:                                     |          |
| 5330 | A. | Ordinance 15051, Section 67, and K.C.C. 21A.06.628;                                        |          |
| 5331 | B. | Ordinance 15051, Section 139, as amended, and K.C.C. 21A.24.055;                           |          |
| 5332 | C. | Ordinance 17539, Section 47, as amended, and K.C.C. 21A.24.072;                            |          |
| 5333 | D. | Ordinance 15051, Section 152, as amended, and K.C.C. 21A.24.137;                           |          |
| 5334 | E. | Ordinance 10870, Section 461, as amended, and K.C.C. 21A.24.140;                           |          |
| 5335 | F. | Ordinance 11481, Sections 3 and 5, as amended, and K.C.C. 21A.24.314;                      |          |
| 5336 | G. | Ordinance 15051, Section 189, as amended, and K.C.C. 21A.24.342; and                       |          |
| 5337 | H. | Ordinance 15051, Section 234, as amended, and K.C.C. 21A.24.550.                           |          |

5338           SECTION 105. By December 31, 2027, the executive shall transmit an ordinance  
5339 that updates mapping for critical aquifer recharge areas, based on the best available  
5340 science when it was previously adopted. The ordinance required by this section shall be  
5341 electronically filed with the clerk of the council, who shall retain an electronic copy and  
5342 provide an electronic copy to all councilmembers, the council chief of staff, and the lead  
5343 staff to the local services and land use committee or its successor.

5344           SECTION 106. The executive shall submit sections 49, 50, 52.A., B.2., C.2., D.,  
5345 and E., 60, 61, 62, 63, 66, 67, 68, 70, 71, 72, 73, 81, 82, 83, 84, 85, 86, 87, 88, 89, 90, 92,  
5346 93, 95, 96, 97, 98, 99, and 104.B. of this ordinance to the state Department of Ecology for  
5347 its approval, as provided in RCW 90.58.090.

5348           SECTION 107. Sections 49, 50, 52.A., B.2., C.2., D., and E., 60, 61, 62, 63, 66,  
5349 67, 68, 70, 71, 72, 73, 81, 82, 83, 84, 85, 86, 87, 88, 89, 90, 92, 93, 95, 96, 97, 98, 99, and  
5350 104.B. of this ordinance take effect within the shoreline jurisdiction fourteen days after  
5351 the state Department of Ecology provides written notice of final action stating that the  
5352 proposal is approved, in accordance with RCW 90.58.090. The executive shall provide  
5353 the written notice of final action to the clerk of the council.

5354           SECTION 108. Severability. If any provision of this ordinance or its application  
5355 to any person or circumstance is held invalid, the remainder of the ordinance or the  
5356 application of the provision to other persons or circumstances is not affected."

5357

5358           Strike Attachment A, Critical Areas Comprehensive Plan Updates, and insert Attachment  
5359 A, 2025 Update to 2024 King County Comprehensive Plan, dated August 2025. The  
5360 clerk of the council is instructed to engross changes from any adopted amendments and

correct any scrivener's errors. Upon final adoption, council staff is instructed to reflect the enactment number throughout Attachment A, incorporate adopted changes into the King County Comprehensive Plan, modify all Comprehensive Plan and technical maps in Attachment A to reflect the changes in any adopted amendments, update the tables of contents as necessary, update footnote numbers as necessary, and provide an electronic copy of each to the executive.

**EFFECT prepared by J. Ngo:** Striking Amendment S1 would make the following changes:

General Changes

1. Updates various terminology for consistency and streamlines code language.
2. Addresses technical corrections, clarifying edits, drafting errors, code reviser notes, and engrosses changes from other ordinances.
3. Adds a cross reference to K.C.C. 21A.50.035 and K.C.C. Title 23 for violations in critical areas.
4. Removes a finding that identifies various county code sections as protection for critical aquifer recharge areas. No code sections are removed as part of this change.
5. Where required, clarifies that farm management plans must be approved.
6. Where applicable, clarifies that best management practices for farm management plans are required only for those applicable to the activity.

Clearing and Grading Exemptions (K.C.C. chapter 16.82)

7. Clearing: eliminates a clearing and grading permit exemption in wetlands, wetland buffers, aquatic areas, riparian areas and severe channel migration hazard areas. (Conditions 4, 23)
8. Emergency tree removal: limits the permit exemption in areas outside of critical areas to those to prevent imminent danger to person or structures (Condition 6)
9. Drilling and testing for critical area reports or monitoring and data collection: in critical areas, limits the permit exemption to only those done with hand equipment, minimal grading, no clearing, and equipment is removed when work is completed (Conditions 1, 2, 22)
10. Farm field access drives: limits the permit exemption to properties in the A zone, Agricultural Production District, or Farmland Preservation Program, has an approved farm management plan, meet applicable best management practices in an approved farm plan, creates less than 2,000 sf of new impervious surface, access is less than 14 feet wide, there is no other alternative location with less impacts to critical areas and associated buffers is available, complies with the

5400 farmland dispersion requirements in the King County Surface Water Design  
5401 Manual, is sited in an area least subject to channel migration, obtains a floodplain  
5402 development permit and state and federal permits when required.

5403 11. Where required, clarifies that farm management plans are to be approved.

5404

5405 Shoreline Master Program (K.C.C. chapter 20.12.200)

5406 12. Adopts new code sections concerning revegetation (Section 63 of the ordinance),  
5407 alluvial fan hazard area development standards (Section 72 of the ordinance) and  
5408 tsunami hazard area development standards (Section 73 of the ordinance) into the  
5409 Shoreline Master Program.

5410 13. Changes the effective date to the date of the ordinance.

5411

5412 Public Benefit Rating System (PBRS) (K.C.C. 20.36.100)

5413 14. Under farm and agricultural conservation land, requires a farm management plan  
5414 for livestock to be in accordance with K.C.C. 21A.30.045.

5415 15. Lowers the threshold for the rural open space category from a 10-acre contiguous  
5416 open space area minimum to 5 acres.

5417

5418 State Environmental Policy Act (SEPA) (K.C.C. 20.44.040)

5419 16. Adds language from WAC 197-11-800 that limits SEPA exemptions to exclude  
5420 proposals undertaken on lands covered by waters, requiring a license governing  
5421 discharges to water or emissions to air not exempt under state law, or requiring a  
5422 non-SEPA-exempt land use decision.

5423 17. Clarifies the thresholds are up to a certain number (for example, “up to” twenty  
5424 dwelling units), rather than exactly a certain number.

5425 18. Broadens the residential exemption to any structure with a certain number of  
5426 dwelling units, not only residential structures, consistent with state law.

5427 19. Exempts any fill or excavation necessary for the construction of a project that is  
5428 otherwise exempt from SEPA, consistent with state law.

5429 20. Lowers the SEPA exemption for code violations in steep slope, landslide, or  
5430 alluvial fan hazard areas from 500 cubic yards to the standard exemption of 100  
5431 cubic yards.

5432

5433 Definitions (K.C.C. chapter 21A.06)

5434 21. Agricultural products: removes specific tree types in the list of agricultural  
5435 products

5436 22. Aquatic areas: streamlines the definition of aquatic areas, integrates the definition  
5437 of “impoundments” into this definition.

5438 23. Aquatic area functions: adds a new definition and examples.

5439 24. Buffer: reverts the definition back to a designated area that is contiguous to a  
5440 critical area. Specifies that a buffer is integral to the functions and values of a  
5441 critical area.

5442 25. Commercial production of agricultural products: Deletes the proposed definition.  
5443 Modified parameters to determine commercial production for critical areas are  
5444 added to K.C.C. 21A.24.051.

- 5445 26. Critical aquifer recharge area: modifies the definition to also include areas where  
5446 an aquifer is susceptible to reduced recharge, consistent with state law.  
5447 27. Farm field access drives: removes regulatory language from the transmittal that  
5448 limits farm field access drives to properties in the A zone, Agricultural Production  
5449 District, or Farmland Preservation Program.  
5450 28. Fish habitat: broadens the definition from only habitats used by salmonids to all  
5451 native fish species, revises potential habitat to include upstream or landward of  
5452 human-made barriers, and revises the examples of fish habitat.  
5453 29. Hazard tree: removes language that a parking area, road, or utility facility within  
5454 striking distance of a structurally deficient tree must be approved to qualify.  
5455 30. Landslide hazard area: revises language that a landslide hazard area includes areas  
5456 located on alluvial fan that is susceptible to episodic inundation, sedimentation,  
5457 and erosional impacts.  
5458 31. Impoundments: repeals this definition and incorporates language into the  
5459 definition of aquatic areas.  
5460 32. Mitigation: modifies the definition of mitigation to state that it is an action to  
5461 compensate for unavoidable impacts after avoidance and mitigation sequencing is  
5462 applied.  
5463 33. Notice of map amendment: identifies which maps are adopted and can be  
5464 modified through a notice of map amendment.  
5465 34. Revegetation: revises the definition of climate-adaptive plants as plant species  
5466 identified by DNRP as current or formerly native to the surround ecoregion and  
5467 that are predicted to maintain their abundance under climate change.  
5468 35. Riparian area: identifies that riparian areas protect the functions and values of  
5469 aquatic areas.  
5470 36. Tsunami hazard area: updates the Washington Geological Survey to the current  
5471 available edition and names the areas on the map.  
5472 37. Wetlands: corrects a past code revising error.  
5473 38. Wetland values: adds language describing wetland values as estimates of the  
5474 worth, merit, quality, or importance of wetlands, identifies that values vary by  
5475 watershed or community, and provides examples.  
5476 39. Wildlife lighting: clarifies that it is exterior lighting, rather than applied measures  
5477 to the exterior lighting, that are designed and installed to reduce impacts to  
5478 wildlife.  
5479

5480 Purpose (K.C.C. 21A.24.010)

- 5481 40. Clarifies that avoidance and mitigation sequencing includes mitigation of impacts.  
5482 41. Clarifies that no net loss, rather than preventing overall loss, is the measure for  
5483 wetlands, aquatic areas, and riparian area functions and values.  
5484 42. Adds a purpose statement for providing clear and objective development  
5485 standards, application requirements, and review processes for the administration  
5486 of critical areas protections.  
5487

5488 Applicability (K.C.C. 21A.24.020)

- 5489 43. Removes proposed language that if an area or site contains more than one critical  
5490 area or natural resource land designation, all designations apply. All designations  
5491 on a site would still apply, consistent with chapter K.C.C. 21A.24 and state law.  
5492

5493 Critical Area Alteration (K.C.C. 21A.24.045)

- 5494 44. Adds moderate channel migration hazard areas as a critical area where all  
5495 alterations are allowed, with conditions.
- 5496 45. Provides additional instruction on how to interpret the critical area alteration  
5497 table.
- 5498 46. Renumbering of certain conditions:
- 5499 a. Condition 64 is renumbered to Condition 2
  - 5500 b. Condition 60 is renumbered to Condition 29
  - 5501 c. Condition 57 is renumbered to Condition 56
  - 5502 d. Condition 58 is renumbered to Condition 57
  - 5503 e. Condition 69 is renumbered to Condition 58
  - 5504 f. Condition 29 is renumbered to Condition 59
  - 5505 g. Condition 3 is renumbered to Condition 60
  - 5506 h. Condition 59 is renumbered to Condition 64
- 5507 47. Consolidation of certain conditions:
- 5508 a. Conditions 11 and 12 are consolidated into Condition 10
  - 5509 b. Condition 23 is consolidated into Condition 58 (which is renumbered to  
5510 condition 57)
  - 5511 c. Condition 52 is consolidated into Condition 51
  - 5512 d. Condition 56 is consolidated into Condition 55
- 5513 48. Repeal of certain conditions: Condition 11, 12, 23, 52, 59.
- 5514 49. Remove proposed condition 70.
- 5515 50. Maintenance or repair of existing structures:
- 5516 a. Applies Condition 6 in severe channel migration hazard areas and alluvial  
5517 fan hazard areas. This condition would limit existing primary structures to  
5518 no increase in the footprint and would not constitute substantial  
5519 improvement, and limit accessory structures to a 1,000 square foot  
5520 addition and no expansion towards an alluvial fan or channel migration  
5521 hazard.
- 5522 51. Expansion or replacement of existing structure: Splits this alteration in two, with  
5523 the following:
- 5524 a. Expansion of existing structures:
    - 5525 ▪ Prohibits this alteration in a landslide hazard area or steep slope  
5526 hazard area (no change from existing code)
    - 5527 ▪ Allows this alteration in severe channel migration hazard areas and  
5528 alluvial fan hazard areas with limitations under Condition 6 (see  
5529 above for description).
    - 5530 ▪ Allows this alteration in a wetland, wetland buffer, aquatic area,  
5531 riparian area, wildlife habitat network, and wildlife habitat  
5532 conservation area, subject to Condition 7. Condition 7 is modified  
5533 so the alteration must be on an existing impervious surface, lawn  
5534 or landscaping area, farm field, or grazed area with limitations on

- original establishment, location, revegetation and/or footprint expansion.
- b. Replacement of existing structures:
    - Allows this alteration in a landslide hazard area or steep slope hazard area for existing legally established structures in areas where the hazard poses little to no risk of injury, and the risk of landsliding or slope instability is low under Condition 5.
    - Allows this alteration in a wetland, wetland buffer, aquatic area, riparian area, wildlife habitat network, and wildlife habitat conservation area, subject to Condition 8. Condition 8 is modified so the alteration is within an existing footprint or has the least impact on the critical area, does not expand the total footprint of all structures and impervious surfaces, is on an existing impervious surface, lawn or landscaping area, farm field, or grazed area, and includes revegetation.
52. Construction/maintenance/repair of a pier or dock:
- a. Allows this alteration in a Category II, III, or IV wetland or wetland buffer, subject to Condition 9. Condition 9 is clarified to state that the alteration is only to provide access to an aquatic area and to remove a condition specific only to aquatic areas.
  - b. Allows this alteration in an aquatic area or riparian area, subject to Condition 10. Condition 10 is modified prohibit the alteration in a salmonid spawning area and requires compliance with K.C.C. 21A.25.180 in type S or F aquatic areas.
53. Grading: allows grading in critical areas when addressing an emergency in an alluvial fan hazard area, subject to Condition 14.
54. Cutting of firewood: prohibits cutting of firewood in severe channel migration hazard area, aquatic area, riparian area, wetland, and wetland buffer. Reverts back to limiting the cutting of firewood for only personal use.
55. New road in unimproved right-of-way: prohibits new roads in unimproved right-of-way as allowed alteration.
56. Horticulture activities, grazing of livestock, and commercial fish farms:
- a. For existing activities, adds clarity for uses established after January 1, 2005 and continuous existence for transfer of ownership, sale, or leasing (Condition 53).
  - b. Allows for the conversion of existing land to other agricultural products, expansion of existing activities and establishment of new agricultural activities on sites where the primary activity is agriculture, with a farm management plan, and outside of areas cleared under a forest practice permit, an aquatic area, a wetland that is not a grazed or tilled wet meadow, wetland buffers or riparian areas with predominantly native plants (Condition 54).
57. Livestock manure storage facility, livestock heavy use area, farm pads: allowed if associated with a horticulture or livestock grazing activity, in an existing grazed, tilled or impervious area, consistent with a farm management plan, subject to conditions, and outside of areas cleared under a forest practice permit, an aquatic

5581 area, a wetland that is not a grazed or tilled wet meadow, wetland buffers or  
5582 riparian areas with predominantly native plants.  
5583 58. Nonresidential buildings: allows nonresidential buildings only on sites where the  
5584 primary use of the site is one that qualifies as horticulture or grazing livestock  
5585 activities, subject to other conditions.  
5586 59. Farm field access drives: allows farm field access drives on sites with horticulture  
5587 or grazing livestock activity, complies with the Surface Water Design Manual, and  
5588 subject to other conditions.  
5589

5590 Agricultural activities development standards (K.C.C. 21A.24.051)

5591 60. Establishes criteria for proof of agricultural activities or commercial production of  
5592 agricultural products, including 1 year of IRS filing, a USDA organic  
5593 certification, enrollment or eligibility for enrollment in the current use  
5594 classification, or other comparable documentation. These criteria would only  
5595 apply to the critical area regulations, not other parts of the Code where  
5596 agricultural activities are regulated.  
5597 61. Requires modifications to farm management plans if impacts to critical areas or  
5598 associated buffers are identified with monitoring.  
5599 62. Clarifies that farm management plans are not effective for the purposes of critical  
5600 areas until approved by the County.  
5601 63. Deletes language that a property owner or applicant may develop a farm  
5602 management plan as part of a program offered or approved by King County.  
5603

5604 Public Rules for Farm Management Plans (K.C.C. 21A.24.061)

5605 64. Adds requirements and procedures for adopting a public rule for farm  
5606 management plans, including an adoption deadline of December 31, 2026.  
5607

5608 Critical area alteration exceptions/reasonable use exceptions (K.C.C. 21A.24.070)

5609 65. Splits critical area alteration exceptions into public agency/utility exceptions and  
5610 private development exceptions.  
5611 66. Clarifies that all exceptions in the shoreline jurisdictions are processed as  
5612 shoreline variances.  
5613 67. Expands the prohibition of critical area alteration exceptions from salmonid  
5614 habitat to fish habitat.  
5615 68. Removes language that an applicant can apply for a reasonable use exception  
5616 without first having to apply for an alteration exception if relief from development  
5617 standards are requested.  
5618

5619 Disclosure (K.C.C. 21A.24.090)

5620 69. Removes the requirement for an applicant to disclose whether they have been  
5621 found in violation of K.C.C. chapter 21A.24 for any property in King County.  
5622

5623 Critical Area Designations (K.C.C. 21A.24.500)

5624 70. Reverts critical area designations from a parcel to a site.  
5625 71. Removes review timelines, which are superseded by K.C.C. Title 20.

72. Specifies which adopted maps that may modify the effectiveness of a critical area designation.

Critical Area Review (K.C.C. 21A.24.100)

73. Development that does not involve site disturbance, clearing, or grading and only requires a permit or approval in K.C.C. chapters 16.04 or 17.04 in alluvial fans are not exempt from critical area review.

Critical Area Reports (K.C.C. 21A.24.110 and Sections 58 and 59)

74. Clarifies that the critical area report requirements may be modified or limited in scope as determined by the Department of Local Services.
75. Identifies what type of critical area report, geological or ecological, applies to each critical area.
76. Adds a requirement for a field investigation and examples of types of documentation in a geological assessment for a geological critical area report.
77. Adds and revises requirements for a geological critical area report, such as basic information, description of hydrology, geological conditions, hazard analysis, and recommendations for proposed development.
78. Revises requirements for an ecological critical area report, such as monitoring plans and site plans.

Critical Area Mitigation (K.C.C. 21A.24.125 and K.C.C. 21A.24.130)

79. Updates avoidance and mitigation sequencing to match state law.
80. Prioritizes, instead of requires, mitigation to occur on-site.
81. When monitoring identifies deficiencies in predicted impact or a failure in mitigation, requires an extension of the monitoring period by at least 2 years
82. Requires all development proposals, rather than only access for developments, to minimize impacts and comply with avoidance and mitigation sequencing.

Revegetation (Section 63)

83. Changes terminology of “climate-smart plants” to “climate-adaptive plants”
84. Establishes a new section for revegetation requirements in critical area and critical area buffers, including providing equal or better ecological function compared to existing conditions, replicating the structure and function of historic natural plant communities, using native or climate-adaptive plants, prioritizing the use of native plants first, and restoring soil and hydrologic functions when necessary.
85. Allows modification to planting plans based on site-specific conditions.
86. Adds requirements and procedures for adopting a public rule for the climate-adaptive plant list, including an adoption deadline of December 31, 2026.

Notice on Title (K.C.C. 21A.24.170)

87. Adds buffer reductions to the notice on title.
88. Clarifies that a notice on title may be removed or amended as part of a critical area designation or a critical areas map update including critical aquifer recharge areas, wildlife habitat networks, channel migration zones, or flood hazard areas.

- 5672 Critical Area Setbacks (K.C.C. 21A.24.200)
- 5673 89. Reduces the critical area setback from 15 feet to 10 feet.
- 5674 90. Removes a proposed 18" height limitation for uncovered decks in critical area
- 5675 setbacks.
- 5676
- 5677 Channel Migration Zones (K.C.C. 21A.24.275)
- 5678 91. Clarifies that new primary dwelling units, accessory dwelling units or living
- 5679 quarters, and required infrastructure are allowed if located on a legally established
- 5680 lot in existence on or before February 16, 1995.
- 5681
- 5682 Geologically Hazardous Areas
- 5683 Landslide and Steep Slope Hazard Areas (K.C.C. 21A.24.280 and K.C.C. 21A.24.310)
- 5684 92. Requires alterations on slopes greater than 40% to not decrease slope stability on
- 5685 contiguous properties and the risk of property damage or injury from landsliding
- 5686 is eliminated or minimized.
- 5687 93. Adds a factor of safety requirement for slope stability for landslide hazard areas
- 5688 and steep slope hazard areas.
- 5689 94. Requires alterations to comply with a geological critical area report.
- 5690 95. Recodifies K.C.C. 21A.24.310.
- 5691
- 5692 Alluvial Fan Hazard Areas (Section 72)
- 5693 96. Allows for buffers from alluvial fan hazard areas if needed.
- 5694 97. Requires alterations in alluvial fans to minimize risk of inundation, sedimentation,
- 5695 channel migration, or erosion on adjacent properties.
- 5696 98. Prohibits vegetation removal from an alluvial fan hazard area or associated buffer
- 5697 except as part of an allowed alteration.
- 5698 99. Requires alterations to minimize disturbance to alluvial fan hazard area, slope,
- 5699 and vegetation unless necessary for slope stabilization.
- 5700
- 5701 Critical Aquifer Recharge Areas (K.C.C. 21A.24.316)
- 5702 100. Updates mining to mineral extraction to reflect land uses in K.C.C. chapter
- 5703 21A.08.
- 5704 101. Requires a property owner to implement all recommended measures to prevent
- 5705 saltwater intrusion into a well.
- 5706 102. Adds a requirement to transmit updated critical aquifer recharge area maps by
- 5707 December 31, 2027.
- 5708
- 5709 Wetlands (K.C.C. 21A.24.335, 340, 342)
- 5710 103. Reclassifies moderate-intensity active recreation or open space and passive
- 5711 recreation inside the Urban Growth Area as moderate and low impact land uses,
- 5712 respectively.
- 5713 104. When buffer averaging is proposed, requires revegetation where native vegetation
- 5714 does not current exist and requires no net loss of wetland functions and values.
- 5715 105. Requires all wetland complexes inside the Urban Growth Area to include a
- 5716 corridor if buffers do not connect.

106. Allows mixed-use, daycares, and social services within the Urban Growth Area, which have a high intensity impact designation, to be lowered to moderate impacts if certain conditions are met. Revises the measure to require revegetation along the edge of the buffer and where existing vegetation is sparse and requires noise-generating activities to be sited away from the wetland.
107. Increases the wetland reestablishment or creation (R/C) and wetland enhancement (E) ratio for Category I forested wetlands from 1:1 R/C and 16:1 E to 1:1 R/C and 20:1 E consistent with Department of Ecology guidance.
108. Increases the rehabilitation ratio for permanent conversion of Category I forested and shrub wetlands into emergent wetlands from 4.5:1 to 6:1.

Aquatic Areas and Riparian Areas (K.C.C. 21A.24.355, .358, .365, .380)

109. Revises the typing for aquatic areas to match the state water typing system in WAC 222-16-030.
110. Standardizes the riparian area width for all Type S and F riparian areas in the Urban Growth Area to 180 feet.
111. Requires revegetation where native vegetation does not current exist when buffer averaging is proposed.
112. Prohibits clearing and other site disturbances from May 1 to October 1 in aquatic areas or riparian areas. Allows modifications or restrictions when required by a state or federal period.
113. Requires projects to minimize the potential for recreational hazards when large wood is proposed in a Type S aquatic area.
114. Requires mitigation plans to include native or climate-adaptive plant species comparable to a nearby relatively undisturbed riparian area.
115. Requires mitigation for riparian areas to include restoration or creation.
116. For alternative mitigation ratios:
- a. Increases the ratio for Type S, F, or N riparian areas with impacts to non-woody vegetation or unvegetated areas from 1:1 to 1.5:1.
  - b. Increases the ratio for Type O riparian areas with impacts to woody vegetation.
  - c. Allows primary actions in lieu of secondary actions where impacts occur to non-woody vegetation or unvegetated areas
  - d. Revises a secondary action for replanting a riparian area addition to adding more riparian area with replanting.
  - e. Adds a secondary action option for removal of a fish passage barrier that is required as part of a development permit.
117. Revises the mitigation ratio for illegal alterations to 3:1.

Wildlife Habitat Networks (K.C.C. 21A.24.385)

118. Removes references to urban planned developments and fully contained communities.

Grazing livestock (K.C.C. 21A.30)

119. For sites with farm management plans:

- a. Requires the livestock management component to comply with the farm management plan requirements in K.C.C. 21A.24.051.
  - b. Clarifies that grazed wet meadows have no grazing area buffer.
  - c. Clarifies that grazing area buffers may be modified consistent with the farm management plan public rule.
  - d. Clarifies that clearing of lands cannot occur in wetlands, wetland buffers, or riparian areas with predominantly native cover.
  - e. Clarifies that clearing of land for new grazing areas must comply with critical area widths or buffer widths.
  - f. Removes special requirements to submit a final farm management plan with a livestock component to the County.
  - g. Removes a hearing examiner appeal process of farm management plans to reflect current practice.
  - h. Identifies measurement methods for grazing area widths.
120. For sites without farm management plan:
- a. Revisions to the section to be applicable to any site with livestock without a farm management plan;
  - b. Removes a 50-foot grazing area buffer for Category IV wetland and maintains the 25-foot grazing area buffer.
  - c. Clarifies that grazed wet meadows have no grazing area buffer.
  - d. Removes a 25-foot grazing area buffer reduction where there is existing diverse, mature vegetation.
  - e. Clarifies that clearing of lands cannot occur in wetlands, wetland buffers, or riparian areas with predominantly native cover.
  - f. Removes an allowance for manure storage on tilled wet meadows.
  - g. Identifies measurement methods for grazing area widths.

#### Development Permit Fees (K.C.C. 27.10.130)

121. Modifies fees for critical area designations based on site size.

#### Comprehensive Plan (Attachment A)

122. In Chapter 3, adds a policy exploring implementation of a Voluntary Stewardship Program within the Snoqualmie Valley Agricultural Production District.
123. In Chapter 5, adds a policy recognizing Indigenous Knowledge as an important aspect in developing rules, regulations, projects, and programs for the protection of critical areas.
124. In Chapter 5, adds lead-in text regarding supporting critical area protections and the long-term viability of agriculture and Voluntary Stewardship Programs. Adds a policy on exploring adaptive management techniques within or adjacent to agricultural activities, such as enrollment through the Voluntary Stewardship Program, collection of data, engagement with Indian tribes, the King Conservation District, farmers, and other interested parties.
125. In Chapter 5, adds a policy on consideration of species and habitats of cultural importance to Indian tribes in planning, development review, and capital projects.
126. In the Glossary, modifies the definition of habitat, wetland functions and wetland values for consistency with K.C.C. chapter 21A.06.

**King County**

# **2025 Update to 2024 King County Comprehensive Plan**

August 2025

*In Chapter 3, Rural & Natural Resources, on page 3-36, after Policy R-755, amend as follows:*

**R-755a      King County should explore implementing the Voluntary Stewardship Program within the Snoqualmie Valley Agricultural Production District through engagement with the Indian tribes, the King Conservation District, farmers, and other interested parties.**

*In Chapter 5, Environment, on page 5-3, after Policy E-106, amend as follows:*

**E-106a      King County shall recognize Indigenous Knowledge, also known as traditional ecological knowledge, as an important aspect in informing the development of rules, regulations, projects, and programs for the protection of critical areas.**

*In Chapter 5, Environment, on page 5-51, amend as follows:*

**((E-412      A small Category IV wetland that is less than 2,500 square feet and that is not part of a wetland complex may be altered to move functions to another wetland as part of an approved mitigation plan that is consistent with E-413 and E-414.))**

*In Chapter 5, Environment, on page 5-56, after Policy E-904, amend as follows:*

The Voluntary Stewardship Program (RCW 36.70A.705) was created under GMA in 2011 to balance the protection and enhancement of critical areas on agricultural lands with the long-term support of viable agriculture in selected watersheds. It is an alternative approach to critical areas protection for agricultural activities. The Voluntary Stewardship Program requires the development of a watershed work plan by a local work group with diverse and broad representation from the agricultural industry, Indian tribes, King Conservation District, Agriculture Commission, and other interested parties. A state approved work plan must address specific Voluntary Stewardship Program criteria and becomes the critical areas regulatory tool for agriculture in selected watersheds in place of traditional critical areas regulations for a ten-year period. A monitoring and adaptive management plan is also required as part of the Voluntary Stewardship Program. While King County has not opted into the Voluntary Stewardship Program, the County should continue to evaluate whether participation in the Voluntary Stewardship Program would be a better tool to address protection of critical areas and agricultural lands.

**E-905      King County should explore adaptive management techniques to protect and enhance critical areas within or adjacent to agricultural activities, such as through enrollment in the Voluntary Stewardship Program, collection of data, and engagement with the Indian tribes, the King Conservation District, farmers, and other interested parties.**

*In Chapter 5, Environment, on page 5-24, after Policy E-334, amend as follows:*

**E-334a      King County should consider species and habitats of cultural importance to Indian tribes in its planning, development review, and capital projects.**

*In the Glossary, on page G-10, amend as follows:*

**Habitat**

Habitat is the ((area where wildlife normally lives and grows. Habitat components include food, water, cover (security, breeding, thermal) and space)) the locality, site and particular type of environment occupied by an organism at any stage in its life cycle.

*In the Glossary, on page G-25, amend as follows:*

**Wetland Functions**

The physical, biological, chemical, and geologic interactions among different components of the environment that occur within a wetland. Wetland~~((s perform))~~ functions ~~((that are grouped into three categories:))~~ include, but are not limited to, functions that improve water quality, functions that change the water regime in a watershed such as flood storage, and functions that provide habitat for plants and animals. (See Chapter 5, Environment)

**Wetland Values**

Values are estimates~~((, usually subjective,))~~ of the worth, merit, quality, or importance of wetland processes, characteristics, or attributes that are considered to ~~((valuable and beneficial to))~~ benefit society. Values vary by watershed or ~~((human))~~ community. Examples of wetland values include ~~((E))~~ education, research, aesthetics, and recreation ~~((are examples of other wetland attributes that may be considered values in that they are beneficial to society))~~.

FMP Monitoring

[J. Ngo]

Sponsor: QuinnProposed No.: 2024-0408

1 **AMENDMENT TO STRIKING AMENDMENT S1 TO PROPOSED ORDINANCE**

2 **2024-0408, VERSION 1**

3 On page 3, after line 45, insert:

4 "H. Farm management plans provide a pathway for environmental protection  
5 through stewardship of agricultural lands by farmers and landowners. Farm management  
6 plans provide a voluntary pathway to protect valuable resource lands through  
7 implementation of design practices, best management practices, education, and technical  
8 assistance. Farm management plans are administered through King Conservation District  
9 through a cooperative process with farmers.

10 I. King County, through the department of natural resources and parks and  
11 department of local services, retains, reviews, or approves a subset of farm management  
12 plans that are developed as a condition of participation in the public benefit rating system  
13 or use of certain agricultural development standards. The county seeks to monitor the  
14 progress and outcomes of farm management plans in order to ensure the protection of  
15 fragile ecosystems, the preservation of prime agricultural lands, and the viability of  
16 farming in King County. The council finds that having data on how farm management  
17 plans support implementation of regulatory flexibility, land conservation, and  
18 development of water quality best management practices would help to inform

monitoring, adaptive management, and future policy decisions. The council intends that the departments collect information on farm management plans, such as which properties have approved farm management plans, the date of issuance, where the farm plan was relied upon as a condition for application of a development regulation or incentives for land conservation or water quality protection, and types of best management practices applied to protect critical areas on site."

On page 118, after line 2400, insert:

"F.1. The department of natural resources and parks shall maintain an inventory of farm management plans required to be submitted, reviewed, or approved by King County as a condition of participation in the public benefit rating system, a critical area alteration related to agriculture, or agricultural and livestock development standards in K.C.C. chapter 21A.24 or K.C.C. chapter 21A.30.

2. The update to the farm management public rule in subsection C.1. of this section shall establish the procedures and the specific types of information to be collected as part of the inventory.

3. The department shall make available and update annually an aggregated summary of the inventory on the county website."

**EFFECT prepared by J. Ngo:** The amendment would:

- Add a requirement for monitoring of county-approved farm management plans.

8/15/2025  
Consultation

[J. Ngo] Sponsor: Quinn  
Proposed No.: 2024-0408

1 **AMENDMENT TO STRIKING AMENDMENT S1 TO PROPOSED ORDINANCE**  
2 **2024-0408, VERSION 1**

3 In Attachment A, on page 2, strike lines 23 through 25 and insert:

4 **"E-106a King County shall recognize Indigenous Knowledge, also known as**  
5 **traditional ecological knowledge, as an important aspect in informing the**  
6 **development of rules, regulations, projects, and programs for the**  
7 **protection of critical areas and invite consultation with individual**  
8 **federally-recognized Indian tribes regarding the intended purpose,**  
9 **sharing, and application of Indigenous Knowledge to inform protection of**  
10 **critical areas."**

11  
12 In Attachment A, on page 2, strike lines 56 and 57 and insert:

13 **" E-334a King County should actively communicate and invite consultation with**  
14 **federally-recognized Indian tribes regarding potential impact to species**  
15 **and habitats of cultural importance to Indian tribes in its planning,**  
16 **development review, and capital projects."**  
17

18 **EFFECT prepared by J. Ngo:** The amendment would invite consultation with federally  
19 recognized Indian tribes on two proposed policies in the Comprehensive Plan related to  
20 Indigenous Knowledge and species and habitats of cultural importance.

21 Policy E-106 would be revised as follows:

22 **E-106a King County shall recognize Indigenous Knowledge, also known as**  
23 **traditional ecological knowledge, as an important aspect in informing the**  
24 **development of rules, regulations, projects, and programs for the**  
25 **protection of critical areas and invite consultation with individual federally**  
26 **recognized Indian tribes regarding the intended purpose, sharing, and**  
27 **application of Indigenous Knowledge to inform protection of critical areas.**

28 Policy E-334a would be revised as follows:

29        **E-334a        King County should actively communicate and invite consultation with**  
30        **federally recognized Indian tribes regarding potential impact to consider**  
31        **species and habitats of cultural importance to Indian tribes in its planning,**  
32        **development review, and capital projects.**

Title Amd

[J. Ngo]

Sponsor: PerryProposed No.: 2024-0408

1    **AMENDMENT TO PROPOSED ORDINANCE 2024-0408, VERSION 1**

2    On page 1, beginning on line 1, strike lines 1 through 86, and insert:

3                   " AN ORDINANCE related to critical area regulations;

4                   amending the King County Comprehensive Plan; and

5                   amending Ordinance 15053, Section 3, as amended, and

6                   K.C.C. 16.82.051, Ordinance 263, Article 2, Section 1, as

7                   amended, and K.C.C. 20.12.010, Ordinance 3692, Section

8                   2, as amended, and K.C.C. 20.12.200, Ordinance 10511,

9                   Section 7, as amended, and K.C.C. 20.36.100, Ordinance

10                  6949, Section 6, as amended, and K.C.C. 20.44.040,

11                  Ordinance 18626, Section 11, as amended, and K.C.C.

12                  21A.06.039, Ordinance 15051, Section 7, as amended, and

13                  K.C.C. 21A.06.072C, Ordinance 10870, Section 70, as

14                  amended, and K.C.C. 21A.06.122, Ordinance 10870,

15                  Section 80, as amended, and K.C.C. 21A.06.200,

16                  Ordinance 11481, Section 1, and K.C.C. 21A.06.253C,

17                  Ordinance 15051, Section 24, and K.C.C. 21A.06.254,

18                  Ordinance 10870, Section 123, as amended, and K.C.C.

19 21A.06.415, Ordinance 15051, Section 41, and K.C.C.  
20 21A.06.451, Ordinance 15051, Section 64, and K.C.C.  
21 21A.06.578, Ordinance 15051, Section 107, and K.C.C.  
22 21A.06.1331, Ordinance 10870, Section 176, as amended,  
23 and K.C.C. 21A.06.680, Ordinance 10870, Section 190, as  
24 amended, and K.C.C. 21A.06.750, Ordinance 10870,  
25 Section 243, as amended, and K.C.C. 21A.06.1015,  
26 Ordinance 10870, Section 288, as amended, and K.C.C.  
27 21A.06.1240, Ordinance 10870, Section 314, as amended,  
28 and K.C.C. 21A.06.1370, Ordinance 10870, Section 323,  
29 and K.C.C. 21A.06.1391, Ordinance 10870, Section 321,  
30 and K.C.C. 21A.06.1405, Ordinance 10870, Section 448, as  
31 amended, and K.C.C. 21A.24.010, Ordinance 10870,  
32 Section 449, as amended, and K.C.C. 21A.24.020,  
33 Ordinance 15051, Section 137, as amended, and K.C.C.  
34 21A.24.045, Ordinance 15051, Section 138, as amended,  
35 and K.C.C. 21A.24.051, Ordinance 15051, Section 140, as  
36 amended, and K.C.C. 21A.24.061, Ordinance 10870,  
37 Section 454, as amended, and K.C.C. 21A.24.070,  
38 Ordinance 10870, Section 456, as amended, and K.C.C.  
39 21A.24.090, Ordinance 14187, Section 1, as amended, and  
40 K.C.C. 21A.24.500, Ordinance 10870, Section 457, as  
41 amended, and K.C.C. 21A.24.100, Ordinance 10870,

42 Section 458, as amended, and K.C.C. 21A.24.110,  
43 Ordinance 15051, Section 149, as amended, and K.C.C.  
44 21A.24.125, Ordinance 10870, Section 460, as amended,  
45 and K.C.C. 21A.24.130, Ordinance 15051, Section 151, as  
46 amended, and K.C.C. 21A.24.133, Ordinance 10870,  
47 Section 464, as amended, and K.C.C. 21A.24.170,  
48 Ordinance 10870, Section 465, as amended, and K.C.C.  
49 21A.24.180, Ordinance 10870, Section 467, as amended,  
50 and K.C.C. 21A.24.200, Ordinance 11621, Section 75, as  
51 amended, and K.C.C. 21A.24.275, Ordinance 10870,  
52 Section 475, as amended, and K.C.C. 21A.24.280,  
53 Ordinance 10870, Section 478, as amended, and K.C.C.  
54 21A.24.310, Ordinance 10870, Section 476, as amended,  
55 and K.C.C. 21A.24.290, Ordinance 15051, Section 158,
