Comment: This language is different from State or Federal regulatory guidance for avoidance and minimization of wetland impacts.				
"Outside of the applicant's control, and not for the profit or convenience of development" is nebulous and does not make any sense				
within the context of growth management and watershed-based protection of aquatic areas. The writer of this section of the				
Comprehensive Plan is obviously ideologically opposed to "profit" and "convenience", two things that are critical to making effective				
communities and planning for growth in our County. Zoning codes plan for development to occur in a specific way in the County, fo	r			
the betterment of it's citizens. Developers of suitable development projects and infrastructure must make a "profit" in order to stay in				
business and provide services and products to King County residents. This is not a dirty word. "Convenience" is also important for				
development projects who are tasked with meeting growth targets for things like housing and services on appropriately zoned parcel	ls			
Underutilizing zoning codes is counterproductive for planning for growth. It is critical in some cases to make development projects				
operate "conveniently" in the community for future use of these structures. There are many examples of development projects				
underutilizing current zoning designations to build a smaller or less operable project in order to avoid a low value wetland or aquatic				
area, when far superior options exist to mitigate for that wetland or aquatic area and build a better project. This language is short-signal area.	ded			
and fails to take into account the options the county already has for highly functioning mitigation solutions like the Mitigation Reserve				
program and State and Federally Certified Wetland Mitigation Banks. I have toured these projects and they are far superior than	,5			
avoiding a small low functioning wetland on a highly zoned multi-family parcel or industrial development that creates jobs and homes

3	Thank you for the opportunity to comment on King County's proposed draft Critical Areas Ordinance (CAO) as part of the periodic update required by the Growth Management Act (GMA). We have reviewed the draft CAO uploaded to PlanView (Submittal ID 2024-S-7674) on 10/29/2024 for 60-day review as well as the other documents uploaded. We greatly appreciate the efforts taken by the County during the drafting process to meet with the Department of Ecology (Ecology) several times and allow us to provide feedback on previous versions of the draft. On 08/16/2024 Ecology sent comments on the CAO draft dated March 2024 to the County. We appreciate that the feedback we gave on wetland banking was taken into consideration. The new language added in SECTION 71 that amends K.C.C 21A.24.340 allows applicants proposing "direct impacts to wetlands and wetland buffers" to use ratios "consistent with the approved mitigation banking instrument". This change addresses our earlier concerns about making mitigation banks more available for all applicants, small and large, and the new language is a good improvement. However, we do have some concerns with parts of the final draft CAO submitted to PlanView. We would like to provide the following feedback and recommendations for consideration by the County before final adoption. 21A.24.170 Notice of critical areas. (D)(2) The addition of language regarding the use of critical area maps and classification are good additions. However, we would also recommend making it clear that site conditions should be the deciding factor in determining presence of critical area location and classification, regardless of what adopted maps might say. Site conditions can change over time and the existing maps for wetlands can be out of date or have potentially inaccurate data. We would recommend including the following language from Wetland Guidance for Critical Areas Chris Jensen March 14th, 2025 Page 2 Ordinance (CAO) Updates: Western and Eastern Washington1 (Ecology Publication #22-06-014) for clarity		Notice and Wetlands	Written	3/14/2025			

issues with permitting and code enforcement in rural King County are getting worse. Yet effective permitting

NOTE Full comment text can be found in accompanying PDF. Name of Commente Topic Comment Date Received Format The Joint Rural Area Team (*) has completed its review of the subject document, as part of the 2024 King 3/17/2025 Peter Rimbos Implementation Written County Comprehensive Plan (KCCP) Major Update. The document offers a greater level of protection to critical areas in the County. Throughout, Best Available Science (BAS) is explained clearly, along with how it informs the regulations and protections with BAS sources noted. If there is a conflict with CAO/BAS application and other Growth Management Act goals, this is noted and explained. For example, buffers are smaller in Urban Areas to allow for the density of housing required. It is noted that planting vegetation in buffers may mitigate for some of the reduced size. However, we are very concerned the promise of this required CAO update will fall short without urgently needed major reform in the Department of Local Services, Permitting Division (DLS-P). Careful application of code, landowner assistance, updated materials and maps, adequate staff, and reliable and effective code enforcement are all needed, but wanting. It is a challenge to truly protect Critical Areas and allow use of private property. This has been a tension in unincorporated urban and rural King County since the Sensitive Areas Ordinance (SAO) was adopted nearly three decades ago. This update recognizes both and attempts to ensure a high level of Critical Area protection, while recognizing appropriate use within the structure of Growth Management. However, much about this is hard for citizens to understand and apply. While Stream and Wetland layers have been updated on King County I-Map, much new mapping is needed and we fear is years away. Materials for citizens all will need to be updated, when the CAO passes. It is truly a huge task for citizens to know how to apply the regulations. In fact, many spend significant money hiring consultants, surveyors, and/or scientists to help them through the regulatory process. Methods to defray some of these costs should be considered to help ensure citizen compliance. Ideally this would include: (1) adequately staffing DLS-P to provide assistance and guidance and (2) updating educational materials to be truly useful. Good intentions fail terribly without careful and consistent implementation, much of which is done through the permitting and code enforcement process. We continue to be deeply concerned that these critical functions are fundamentally broken and further complicated by recently State-mandated permit streamlining (which actually was proposed and passed to streamline permitting of needed housing in Urban Areas, but is being applied throughout unincorporated King County). We also understand attempts at improvement are underway, which we applaud, but we have yet to see any positive results. If anything, in particular cases,

5	On behalf of the Snoqualmie Indian Tribe (Tribe), please accept these comments on the 2025 updates to the King County Comprehensive plan and proposed ordinance 2024-0408. We appreciate the opportunity to provide these comments. The Snoqualmie Tribe is a federally recognized sovereign Indian Tribe and a signatory to the Treaty of Point Elliott of 1855, in which it reserved to itself certain rights and privileges and ceded certain lands to the United States. As a signatory to the Treaty of Point Elliot, the Tribe specifically reserved to itself, among other things, the right to fish at usual and accustomed areas and the "privilege of hunting and gathering roots and berries on open and unclaimed lands" off-reservation throughout the modern-day state of Washington (Treaty of Point Elliot, art. V, 12 Stat. 928). The Tribe has lived on, tended, and managed this land since time immemorial and the rivers, lakes, and surrounding lands are vitally important both ecologically and culturally. We appreciate and support King County's commitment to strengthening environmental protections for critical areas and the use of Best Available Science (BAS) to protect functions and cultural values of critical areas, including streams and wetlands, and reduce negative effects of development. We also recognize the County heeded tribal consultation and addressed Indigenous Knowledge (IK) in the BAS review to inform these updates. To reiterate the comments recorded from previous consultation, Indigenous Knowledge is an aspect of BAS (Kassi et al. 2022; Whyte et al. 2015), and should be included as a core aspect in the development of rules, regulations, and projects, rather than as a secondary opportunity to add value. IK is itself a form of science that offers depths of insights through deep time and deep space methodologies, concepts, training, and experience that the Tribe gathered from the stewardship and conservation of their resources for thousands of years that only the Tribe holds and can provide. This should be included alongsid	Snoqualmie Tribe	Various	Written	3/27/2025

6	My name is Carryn Vande Griend and I work at Puget Sound Energy. I'm sending in PSE's comments ahead of the Local Services and Land Use Committee's briefing on wildfire preparedness on April 16. Thank you for distributing to the committee. Puget Sound Energy takes a holistic approach to the evolving risk of wildfires by operating and improving our infrastructure to create an electric system that is reliable, resilient, and above all, safe. PSE's Wildfire Risk Management Program includes our year-round work to prevent wildfires by investing in projects to strengthen our infrastructure, utilizing tools and new technologies to enhance our situational awareness, monitoring real-time conditions and operating the electric system at varying levels of sensitivity and partnering with emergency responders, local organizations, and our customers to build more resilient communities. We also use weather forecasting and modeling tools to evaluate conditions, and we may operate our electric system more conservatively during critical fire weather conditions to prevent wildfires. This includes turning on Enhanced Powerline Settings (EPS) or using a Public Safety Power Shutoff (PSPS) to help keep our customers and communities safe. These measures can result in power outages, and we want you to be prepared. We consider multiple factors when deciding which measures to use to safely operate the electric system, including wind speed, humidity, temperature, moisture levels in trees and brush, fire risk modeling, and observations from field crews and local emergency response partners. During high-risk conditions, PSE uses Enhanced Powerline Settings on targeted lines to make the electric system more sensitive to potential hazards, such as a tree branch touching a line, and automatically turn power off to prevent sparks. Customers may experience unplanned power outages when these settings are in place, and can find restoration updates on the outage map. When conditions threaten our ability to safely operate the electric system, we	Puget Sound Energy	Wildfires	Written	4/14/2025				
6	As we approach the summer, here are some steps you can take to prepare for peak wildfire On March 17 we submitted the attached Written Comments to the KC LS&L-U Committee. We are re-submitting the same comments in response to the April 16 Meeting Announcement on Committee's the Critical Areas Regulations Ordinance and Schedule Update, which we received yesterday, calling for Public Comment. 8	My name is Lauren Silver-Turner and I'm the Executive Director of the Snoqualmie Valley	Lauren Silver-Turner	Fish Farm Flood	Written	4/16/2025			
	Preservation Alliance, a nonprofit working to protect and enhance the lives, livelihoods,							
	lands, and waters of the Snoqualmie Valley. Farmland protection, agricultural viability,							
	and a resilient local food system are core to our mission.							
	I am emailing to provide comment on the proposed critical areas ordinance updates.							
	To begin, I was surprised—and frankly disappointed—to hear that executive branch staff							
	cited robust outreach and engagement of agricultural stakeholders for this update							
1	process. It was even suggested that the Fish, Farm, Flood Implementation Oversight							
l	Committee, or FFF IOC, was consulted. As a long-time IOC member and the current							
	Farm Caucus Co-Chair, I must respectfully disagree. We had a single, presentation-style							
	meeting on the Best Available Science report, but no opportunity was given to provide							
	substantive input or collaboratively shape revisions.							
	To my knowledge, the Agricultural Commission also received only a high-level overview							
	in Fall 2023. No drafts were shared, and while commissioners could ask questions, they							
	were not given the opportunity to offer recommendations or raise concerns about							
	potential impacts to agriculture.							
	My role at SVPA is centered on listening to and amplifying the voices of farmers. What							
	I've consistently heard is that they did not feel meaningfully engaged in this process. And							
	yet, these are the very people who manage the land and water every day—many of whom							
	care deeply about ecological health and salmon recovery.							
	In fact, SVPA and the Snoqualmie Watershed Forum conducted a community-based							
	social marketing study to understand farmers' motivations for riparian restoration.							
	Nearly every participant cited environmental ethos and ecological function—such as							
	habitat or water quality—as their primary motivator. These are not farmers who need to							
	be coerced into stewardship; they are already participating, voluntarily, when							
	engagement is collaborative and incentives are clear.							
	If SVPA, the FFF Farm Caucus, the Agricultural Commission, the Snoqualmie Valley							
	Watershed Improvement District, SnoValley Tilth, and even King County Ag staff were							
	not engaged—then I ask: who was?

9	There are problems with the critical areas update and critical aquifer recharge areas. The maps are in need of update, the methods behind the critical area definition are deficient and inconsistent with the Groundwater Management Plan in East King County such as rainfall, are questionable science by the updates own references, and implications of maps do not match actual experience and characteristics in the North Bend area.	Michael Thomas	CARAs	Written	4/16/2025
	Statements that critical aquifer recharge area maps do not need to be updated because the methodology King County uses has not changed does not consider the reality of well management and advances in wellhead protection mapping are questionable. Wells can be added, moved, changed, and abandoned. New mapping can become available changing to more advanced methods such as addressing topography and movement of groundwater. This means the underlying wellhead protection area may change and the critical aquifer recharge area change. The process by which wellhead protection areas are adopted is governed by WA DOH ODW as part of water system planning and the county reviews and approves water system plans which have wellhead protection as a component and subject to significant review.				
	There are expensive requirements to being mapped to a CARA; one of which from a septic system owners perspective is the requirement to reduce nitrates pand arbitrarily set at <1 acre in KCC 21A.24.313-316; however, the method which is the basis of 1 acre is suspect areas of the county get far more rainfall than the average used to make the 1 acre recommendation (and in East King County rainfall is part of the East King County Groundwater Management Plan), and areas such as North Bend (within East King County) are in topography (mountains) and have high horizontal movement of groundwater. There is no history of nitrate issues in public drinking water sources in North Bend and in the presence of 1000s of aging and basic septic systems that do little to address nitrates. Reducing nitrates in septic systems is expensive, and costs relative to very simple gravity systems owners currently have to one that reduces can be 10k's of dollars more and not needed.				
	I attach an earlier memo which has additional information about the inadequacy of CARA methodolgy and BAS which are the basis of KCC 21A.24.313-316 and should be taken as comment on the land use and policy elements and critical area regulations update. It is very clear it is problematic and needs change to fairly address OSS costs and protect water resources.				
	Mrs. Perry's office has been previously contacted on the matter last year but there has been no followup. This issue can waste \$10k's				
10	per septic system and there are 1000s in North Bend alone. I very much agree with remarks by the farmer who feels their rights are Verbal comment aviailable at this link: https://king.granicus.com/player/clip/10930?meta_id=715210	Erin Erickson	Fish Farm Flood	Verbal	4/16/2025

	The Washington State Department of Transportation (WSDOT) appreciates the opportunity to provide additional comments on the proposed ordinance (2024-0408) that revises the King County's Critical Area Ordinance (CAO). WSDOT offers the following comments and recommendations on the proposed CAO revisions. Wetland Mitigation 1) Mitigation Banks and Advance Mitigation Ratios (Section 71 – K.C.C. 21A.24.340) WSDOT supports the proposed inclusion of mitigation bank ratios that are in line with a bank's approved Mitigation Banking Instrument (MBI). However, there are two issues that remain unresolved and require additional guidance. a. Bank ratios for Wetland Buffers. The proposed CAO updates state that direct impacts to wetland and wetland buffers shall be consistent with the MBI ratios, but that direct permanent wetland impacts would not be less than one credit to one acre of impact (Section 71, E.1.a). However, it is not clear if this 1:1 minimum threshold also applies to permanent direct wetland buffer impacts as well. This needs further clarification to avoid confusion. It is our recommendation that language be added that states compensatory buffer mitigation would follow what is recommended in the MBI. The approved mitigation banks in King County range from four to five acres of buffer mitigation or one credit. As written, it would be easy to misconstrue the code to be requiring a 1:1 minimum credit-to-acre mitigation for buffer impacts, which would result in at least a 4:1 acre-to-acre mitigation requirement. b. Ommission of Advance Mitigation. Permittee-responsible advance mitigation is agreat tool for both applicants and regulators to expedite project review and permitting, while providing ecological benefits prior to project impacts. Like mitigation banks, advance mitigation sites are built at least two years prior to project impacts, if not further in advance, and replaces lost wetland functions sooner than concurrent compensatory mitigation, demonstrating site success prior to using credit generated fro	WSDOT	Wetlands and Riparian Areas	Written	5/21/2025	
	D.5.b states that the Credit-Debit method may be used in the ecological critical area report to determine no net loss of functions and values. However, the mitigation section (Section 71) does not mention the Credit-Debit method at all. Ecology's development of this					
	method was with the intention of it being used as a more accurate way of calculating the replacement of wetland impacts instead of using traditional compensatory mitigation ratios. This method represents the best available science from Ecology for determining					
	functional replacement of impacts and accounts for temporal loss, risk of failure, functional lift of restoration, and other metrics that

10	Manager is Deman Karaman and Langer bints as head at advant at October at High October	Dames Karaman	Over a set for Ondia as a	\A/-::44	F/00/000F		
18	My name is Darya Kreymer, and I am a high school student at Cedarcrest High School,	Darya Kreymer	Support for Ordinance	Written	5/22/2025		
	Duvall, and I am writing in support of Proposed Ordinance 2024-0408, which updates the						
	Critical Areas Ordinance (CAO) and advances King County's 2025 Comprehensive Plan.						
	As a resident of Duvall, who deeply values the environmental sustainability and responsible						
	land use planning of our county, I believe this ordinance represents a necessary and						
	science-driven step forward to protect our region's public health, safety, and natural						
	ecosystems, and should be adopted and implemented.						
	One of the key strengths of Proposed Ordinance 2024-0408 is its comprehensive approach to strengthening protections for King County's critical areas, places like wetlands, streams,						
	steep slopes, and other high-risk or environmentally sensitive zones. These are the parts of						
	our landscape that help prevent flooding, support biodiversity, and maintain water quality,						
	yet they are often the most vulnerable to damage from development. I support this						
	ordinance because it directly responds to those risks by expanding buffer zones around						
	sensitive areas, increasing mitigation standards, and applying updated science to						
	determine how these areas should be protected. These steps will help prevent irreversible						
	environmental harm and ensure development happens responsibly.						
	I also strongly agree with the inclusion of new hazard classifications like tsunamis and						
	alluvial fan zones. These additions show that the County is planning for future risks, not just						
	reacting to current ones. Including these areas in the code means future development will						
	need to account for real geological dangers, protecting both people and property. It also						
	shows that the County is taking seriously its responsibility to use the best available science						
	to guide policy, something that I believe is crucial in an era of increasing climate						
	uncertainty.						
	Additionally, the added definitions and reporting standards help avoid confusion and give						
	professionals the tools they need to do their work accurately. As someone who supports						
	clear environmental policy, I think these updates make the code easier to follow while still						
	holding projects to high standards. I'm also glad to see that the ordinance removes						
	outdated or little-used programs like the Rural Stewardship Plans and instead offers						
	updated tools that give flexibility to homeowners, farmers, and restoration efforts. This is a

19	Thank you for the opportunity to provide comments on Ordinance 2024-0408. As you consider updates to the Critical Areas Ordinance, we encourage you to carefully evaluate how the proposed changes may impact housing affordability, permitting timelines, and overall clarity in the development process. MBAKS supports King County's efforts to update critical areas regulations in line with environmental goals. However, we also encourage	Master Builders Association of King and Snohomish Counties	Various	Written	5/28/2025
	the Council to consider how proposed changes may impact other key Growth Management Act (GMA) goals, including housing affordability, urban growth, timely permitting, and clarity in the development process.				
	In our attached comments, we raise concerns around implementation clarity, ambiguous language in key definitions, and the need for more predictable permitting requirements. We ask that the Council carefully evaluate proposed changes to setbacks, buffer widths, and mitigation standards—ensuring that any revisions are supported by best available science (BAS) and do not unintentionally increase housing costs or delays. We also want to express our strong support for the use of mitigation banks and other programmatic mitigation tools, which are recognized by state and federal agencies as more effective and predictable than traditional permittee-responsible approaches. Aligning with these modern practices would improve outcomes for both the environment and applicants.				
	We appreciate your work on this important update and are happy to serve as a resource as the process moves forward. If you have any questions, please don't hesitate to contact me at vshakotko@mbaks.com or 425.435.8990.				
	With nearly 2,500 members, the Master Builders Association of King and Snohomish Counties (MBAKS) is the largest local homebuilders' association in the United States, helping members provide a range of housing choice and attainability. MBAKS welcomes the opportunity to provide comments on the proposed draft ordinance 2024-0408 amending the King County Critical Area regulations. Balancing Critical Area Updates with GMA Goals				
	The Growth Management Act (GMA) outlines 15 planning goals to help guide comprehensive plans and development regulations. These goals are not ranked by priority and are intended to be balanced to reflect each community's needs. MBAKS supports Goal 10: "Protect and enhance the environment and the state's high quality of life." However, as the Council considers updates to critical areas regulations, we urge you to also weigh how these changes could affect other key GMA goals, including: • Goal 1: Urban Growth. Encourage development in urban areas where adequate public facilities and services exist or can be provided				
	in an efficient manner. • Goal 4: Housing. Plan for and accommodate housing affordable to all economic segments of the population of this state, promote a

20	Thank you for the opportunity to provide comments regarding the proposed Striking Amendment S1 to King County's Critical Areas Ordinance in preparation for your discussion on the July 16 agenda. We appreciate the County's continued effort to modernize its critical areas regulations and the thoughtful work of the Local Services and Land Use Committee in developing the proposed amendment. Our letter acknowledges several positive elements in the striking amendment, including improved organization, procedural transparency around habitat updates, and the County's ongoing public engagement. At the same time, we outline a several remaining concerns about the potential impacts on housing feasibility, particularly in urban and infill areas. Key issues include: Expanded buffer widths that may reduce buildable land area without localized performance data Vague permitting language and unclear report standards that could delay project approvals A preference for on-site mitigation that diverges from current state and federal policy New hazard area restrictions that lack publicly available mapping or transparent criteria The absence of SEPA exemptions, which have proven effective in streamlining permitting in other jurisdictions MBAKS remains committed to working collaboratively with Council and staff to ensure the final ordinance supports both critical area protection and the production of attainable housing. If you have any questions, please don't hesitate to contact me at vshakotko@mbaks.com or 425.435.8990. The Master Builders Association of King and Snohomish Counties (MBAKS), with nearly 2,500 members, is the largest homebuilders'	Master Builders Association of King and Snohomish Counties	Various	Written	7/15/2025
	association in the U.S., helping to provide diverse housing choices and attainability. We aim to be the region's most trusted housing experts and believe everyone deserves a place to call home. MBAKS thanks you for your continued work to modernize King County's critical areas regulations. We appreciate the thoughtful effort				
	behind the proposed Striking Amendment S1 and recognize the challenge of balancing environmental protection, legal compliance, and community needs. While we support the County's goal of aligning with best available science and state law, we remain concerned that several provisions in the revised draft could unintentionally hinder housing production, especially in urban and infill contexts. 21	We have a few questions about the code change to the critical areas part of the plan. To give you background: We have a new house project that we are preparing to submit to the building department Critically, with this specific property and the impacts of the critical areas change, the property will become unbuildable after the code change. 1.Will the changes apply as of the day/time of the vote, or will they apply at some later date? If so, is there a specified later date yet? Is the vote expected to be delayed again? 2.Vesting. With the new law requiring permits to be processed faster, King County permit reviewers are now using the "screening" period (where they check for application completeness before they officially accept the permit) as a much longer and more ambiguous timeline where they could ask for all sorts of new things from the applicant that they normally would ask for during permit review time. We prepare very thorough applications, but with the recent staff changes, the items being asked for are not the same reviewer to reviewer, so we have not been able to adequately predict what they will expect on top of standard application items. This is a problem relating to the comp plan because a project is not "vested" into the current code until it passes screening. We are planning to submit in August to give it plenty of time to go through screening before the Dec 2nd vote, but we are concerned with the ambiguous amount of screening		Vesting	Written	7/16/2025
	time, we will possibly lose the whole project if the screeners ask for something that we cannot produce in the time remaining (such as revisions to complex consultant reports, for instance). Until the code change is official, can Council either A) add an amendment that will allow for vesting at time of submittal for projects that will be adversely affected by the code change and have made a best effort to be accepted in time or B) permit the building officials to allow earlier vesting at their discretion during this time.

22	On behalf of the Muckleshoot Indian Tribe, I write to respectfully comment on the Striking	Muckleshoot Indian	Terminology	Written	8/5/2025
	Amendment to the 2025 Comprehensive Plan & Critical Areas Regulations Ordinance. Both the	Tribe			
	King County Comprehensive Plan and the Critical Areas Regulation Ordinance reference Indian				
	tribes, and respectfully include tribes in planning related matters; however, neither clearly				
	define Indian tribes as those that are federally recognized.				
	The Muckleshoot Tribe encourages King County to define Indian tribes as "federally recognized				
	Indian tribes" at the outset of the Critical Areas Regulations Ordinance, and to limit				
	consultation and comment solicitation to tribes that are federally recognized. Tribes that are				
	federally recognized retain certain rights as sovereign political nations that other groups do not.				
	The rights reserved by the treaties and the principles of self-government are fundamentally				
	linked to recognition as a sovereign political entity. Tribal heritage groups push to overlook				
	established criteria for tribal recognition and equate their heritage-based voluntary groups with				
	legitimate Indian tribes; doing so risks undermining the very principles of tribal sovereignty.				
	This not only diminishes the inherent value of tribal governance but also jeopardizes the vital				
	government-to-government relationship that exists between the County and legitimately				
	recognized Indian tribes.				
	Thus, we ask that King County defines Indian tribe in its Critical Areas Regulations Ordinance as				
	"federally recognized Indian tribes," or change the language to "federally recognized Indian				
	tribe" anywhere where "Indian tribe" is referenced. These references exist on the following				
	pages of the Striking Amendment:				
	Page 93, Section 45b editing KCC 21A.24.045 (here, in fact, the Striking Amendment				
	proposes to strike "federally recognized tribe" and replace it with "Indian tribe".)				
	Page 118, Section 51(C)(2)(a)				
	Page 150, Section 63(C){2)(a)				
	Page 237, Section 96 (does reference treaty fishing rights)				
	Page 241 (does reference treaty fishing rights)				
	We appreciate your leadership and commitment to honoring tribal sovereignty and commend				
	you on King County's current efforts to honor true government-to-government relations.

23	Thank you for your continued work on the Critical Areas Ordinance update. On behalf of the Master Builders Association of King and Snohomish Counties, I'm writing to share a supplemental comment letter (attached) in response to the August 20 LSLU packet and the latest version of Ordinance 2024-0408.	Vanessa Shakoto	Various	Written	8/19/2025	
	We appreciate the County's effort to modernize these regulations and recognize the thoughtful refinements made throughout the process. However, we remain concerned that several provisions, if not further clarified or adjusted, could limit housing feasibility, especially for smaller, urban, and infill sites.					
	Key concerns outlined in the attached letter include:					
	•Expanded buffers that may significantly reduce buildable area, particularly on constrained urban parcels •Unclear or unmapped geologic hazard areas that could restrict development without sufficient transparency or predictability •Added septic regulations in aquifer recharge zones that go beyond state standards and may increase rural housing costs •Overreliance on onsite mitigation can block small projects where offsite mitigation tools are more viable •Unclear critical area reporting requirements that introduce cost and delay for homeowners and smaller builders •Lack of transition mapping or timing may result in confusion or project denial if standards shift mid-application					
	As the Council moves toward final adoption, we urge further refinements to ensure the ordinance supports both environmental protection and housing opportunity across King County. Please don't hesitate to reach out if we can provide additional detail or serve as a resource. We look forward to continued collaboration.

24	Thank you for the opportunity to comment on Proposed Ordinance No. 2024-0408, an ordinance related to critical area regulations, the	Tim Trohimovich	Various	Written	8/19/2025
	Striking Amendment S1, and other amendments. We appreciate the opportunity to comment on the proposed ordinance. Overall,				0, 10, 2020
	Futurewise strongly supports the update. We do have some comments and suggestions below. It is important to remember that this is a				
	once in ten years update to the critical areas regulations and we need to get the update right.				
	Futurewise works throughout Washington State to support land-use policies that encourage healthy, equitable and opportunity-rich				
	communities, and that protect our most valuable farmlands, forests, and water resources. Futurewise has members and supporters				
	throughout Washington State including King County.				
	Summary of the Recommendations				
	☐ Futurewise supports basing riparian buffers on the latest best available science to protect Chinook habitat and other aquatic habitats.				
	We recommend incorporating the State of Washington Department of Fish and Wildlife's recommendations that the buffers for rivers				
	and streams be one 200-year site-potential tree height (SPTH) in width on both sides of the water body and that this width should be				
	measured from the edge of the channel, channel migration zone, or floodplain whichever is wider throughout unincorporated King				
	Comments on Proposed Ordinance No. 2024-0408, an ordinance related to				
	critical area regulations				
	August 19, 2025				
	Page 2				
	County.				
	1 This buffer is necessary to prevent a loss of fish and wildlife habitat. Please see page 3 of this letter for more information. □ Retain the	;			
	Executive recommended 15 foot setback in K.C.C. 21A.24.200 and increase it to 30 feet from critical areas buffers in areas susceptible				
	to wildfire. These setbacks will protect people and property from wildfires by allowing clear zones to reduce the potential that wildfires				
	will spread to homes. They will also protect critical area buffers from damage as residents try to protect their homes. Please see page				
	7 of this letter for more information.				
	□ Designate and protect rare plant categories and listings from the Department of Natural Resources Natural Heritage Program as the				
	GMA requires. This will protect rare plants and the animal species and people that depend on the plants. Please see page 7 of this letter	-			
	for more information.				
	☐ Futurewise supports designating and regulating alluvial fans. Alluvial fans are hazardous locations on which to build. Designating				
	them as geologically hazardous areas will protect people and property. Please see page 8 of this letter for more information.				
	Require case-by-case determinations of landslide buffers based on the risk to the proposed development. This will better protect				
	people and property. Please see page 8 of this letter for more information.				

#	Comment	Name of Commente	Topic	Format	Date Receive
25	I am writing regarding Proposed Ordinance 2024-0408, which updates critical area regulations for the 2025 Comprehensive Plan. The July 16, 2025, Local Services and Land Use Committee meeting packet outlines the ordinance's purpose but does not provide specific details about Striking Amendment S1 (released July 15, 2025) or the public line amendments (released August 15, 2025). I request the full text of these amendments, particularly details on changes to buffer widths and sizes for wetlands, streams, floodplains, and steep slopes. For example, I am interested in any modifications to minimum buffer requirements or conditions for buffer averaging, as these directly impact environmental protection and development. Please make these details available on the council's website. (https://kingcounty.gov/en/dept/council/governance-leadership/county-council/useful-links/comprehensive-plan/2025) or provide them upon request.		Buffers	Written	8/19/2025
	Prior to final passage, comments and concerns of impacted property owners should be specifically addressed. In general, a perceived lack of engagement with various property owners and their concern for their property rights is not adequately considered or presented to property owners by the county. Concerns range from buffer widths through impact to farming, development, to concisely and accurately mapped CARAs, public line amendment availability is needed for an informed analysis by the public.				
	Attending to the lack of readily available, accessible, and easily located information for the public would comply with the need to provide clear and specific details to documents that are placed on the county website. The lack of specifics in the information presently provided with an abundance of language (more than 800 pages in one document, and over 400 pages in another) in CAO update documents and related published documents is an oversight that must be rectified. With improvements, we could thank you for ensuring transparency in this process.

26	On behalf of the Citizens' Alliance for Property Rights (CAPR), King County Chapter as the new President, I submit the following written comments to be entered into the record regarding the August 20, 2025 Local Services and Land Use Committee meeting packet and agenda. CAPR represents property owners and small business stakeholders across King County who are deeply concerned about the ongoing erosion of private property rights under the guise of "comprehensive planning," "equity," and "environmental stewardship."	Domnique Scarimbolo	Various	Written	8/19/2025
	I. Accessibility and Transparency Failures The meeting materials for this agenda exceed 800 pages, filled with technical amendments to dozens of code provisions. This sheer volume and complexity makes it impossible for the average property owner to meaningfully participate. When King County produces documents of this size, written in bureaucratic and legal jargon, it effectively denies citizens the ability to understand or challenge the policies being advanced. Public comment under these circumstances becomes a hollow procedural checkbox, not a meaningful consultation. This lack of accessibility undermines public trust in the process and raises serious questions about whether the Council is meeting its obligations for transparency and fair notice.				
	II. Predetermined Outcomes CAPR has observed that Comprehensive Plan amendments and Critical Areas Ordinance (CAO) updates follow a familiar pattern: lengthy public comment processes are held, yet the final outcome has already been decided. Language is adjusted for optics, but the core policy direction remains unchanged. This meeting continues that pattern. The Council has already signaled support for the 30-Year Forest Plan, the expansion of critical areas regulations, and new monitoring and adaptive management systems. Citizens are asked to engage, but the decisions are preordained. This undermines democratic legitimacy.				
	III. Critical Areas Ordinance Expansion (Ordinance 2024-0408) The proposed amendments to K.C.C. 21A and related provisions represent a significant expansion of the CAO. Each update imposes greater restrictions: larger buffers, more setbacks, reduced buildable land, and heightened permitting requirements. Particularly troubling is the incorporation of "adaptive management" provisions, which allow unelected staff to impose further restrictions without direct Council vote or meaningful public oversight. This creates open-ended regulatory power over private property and amounts to a regulatory taking without compensation, contrary to both state and federal constitutional protections. For rural property owners in unincorporated King County, this translates into a loss of use, value, and economic opportunity. These

27	Comments regarding the proposed Critical Areas Ordinance updates 2025	Cindy Alia	Buffers	Written	9/1/2025
	As farmers and property owners in unincorporated King County, we demand that the 2025 Critical Areas Ordinance (CAO) update, including Striking Amendment S1 to Proposed Ordinance 2024-0408, address our concerns to protect our livelihoods and property rights.				
	As public servants, you are accountable to us, not to speculative environmental policies. The CAO's reliance on the precautionary principle, which imposes restrictions without proving specific harm from our land use, erodes the essential nexus test required by law, risking unconstitutional takings. Below are our concerns and demands for a fair and balanced CAO.				
	CAPR Concerns:				
	Expanded Buffer Widths Reducing Usable Land				
	Buffer increases (e.g., 100–225 feet for wetlands, 50–150 feet for streams) drastically cut arable and developable land, reducing a 10-acre farm's usable area by 30–50% and limiting construction. This threatens our \$150 million agricultural economy and property values. The precautionary approach, lacking a clear cause-and-effect link to our activities, unjustly restricts our land. We demand site-specific buffer adjustments, universal flexibility beyond Agricultural Production Districts, and proof of harm per the essential nexus test.				
	2. Costly and Complex Permitting Processes				
	Stricter permitting, with environmental assessments costing \$5,000–\$20,000, burdens small farmers and owners, delaying projects by 6–12 months. These costs, driven by precautionary regulations, hinder farm upgrades and development without proven necessity. Simplify permitting, provide subsidies, and ensure restrictions are tied to specific impacts, as required by law.				
	3. Economic Impacts on Property Value and Farm Profitability				
	Buffer expansions and zoning restrictions reduce property values (e.g., 40% loss on a 5-acre parcel with a 2-acre buffer), threatening financial stability. Precautionary rules, lacking a nexus to our land use, risk takings without compensation. Implement tax relief or				
28	I have attached comments regarding the climate adaptive plants amendment in the critical areas update. I have testified several times over the past year in opposition to the proposed amendment. It would allow the substitution of non-native "climate adaptive" plants for native plants when revegetating critical areas where native plants are currently required.	Carolyn Boatsman	Climate-smart Plants	Written	9/22/2025
	I regret that I was not able to testify at the Local Services and Land Use Committee regarding this topic in recent months. I was responsible for a person who had suffered a severe stroke. I have however carefully reviewed recent updates to the code language.				
	Please feel free to contact me if you have questions regarding my comments or wish to request information or clarification.

Plan (Plan)" as submitted to the Council on June 30th by the Executive. The Four Tasks outlined

NOTE Full comment text can be found in accompanying PDF. Comment Name of Commente Topic Date Received Format Please accept the Joint Team [*] Comments (attached) regarding the proposed Critical Areas Monitoring and Adaptive Management Plan, part of the 10/16/2025 30 Peter Rimbos Support for Ordinance Written Critical Areas Ordinance (CAO) Update before you and soon to be the subject of a Public Hearing. Previously we provided you and your Local Services and Land-Use Committee both Oral and Written Comments on the CAO Update and Best Available Science (these included: Joint Team CAO/BAS Comments and Joint Team 2024 KCCP Major Update CAO/BAS Comments, when we were the Joint Rural Team before expanding to include three Urban Unincorporated Area Organizations earlier this year and becoming the Joint Team). Even though technically part of the 2025 King County Comprehensive Plan (KCCP) Annual Update, we consider the CAO Update an important last step of the 2024 KCCP Major Ten-Year Update, for which we began our participation, including thorough review and comment, back in early 2022. Thank you in advance for your due consideration of our attached Comments. The Joint Team represents ten Rural Area Organizations and three Urban Unincorporated Organizations throughout King County. Our organizations and their members have significant knowledge and history with past Critical Area regulations and their implementation. As a followup to our extensive work on the 2024 KCCP Major Ten-Year Update, we have reviewed the "Best Available Science Review and Updates to the Critical Areas Protection Report," "SEPA Checklist," "Riparian Analysis Process and Parameters," "SEPA Determination of Non-Significance," and other relevant materials associated with the CAO Update (Update). In general, the Update is very good and offers a greater level of protection to critical areas in the County. Best Available Science is clearly explained, along with how it informs the regulations and protections. If there is conflict with other Growth Management Goals, it is explained and noted. For example, buffers are smaller in urban areas to allow housing density, while increased vegetation in those buffers is recommended to improve the protection. We applaud the extensive use of non-regulatory measures throughout. These include new and improved mapping, the Land Conservation Initiative, Public Benefit Rating System (PBRS), and the reduction from 10 ac to five ac for Rural Open Space eligibility, stormwater management, flood management planning, Farm and Forest Management Plans, restoration of damaged critical areas, and other proven strategies. All of these measures have multiple benefits, yet provide some flexibility, while still ensuring compliance. We are especially pleased with the "Critical Areas Monitoring and Adaptive Management Program

31	Thank you again for sharing the essence of the Snoqualmie Tribe's comments regarding the draft amendment of the critical areas regulations, in which they requested;	Carolyn Boatsman	Climate-smart Plants	Written	10/22/2025
	 Tribal consultation in the development of the climate-adaptive plant list; and The requirement for revegetation with native species. 				
	In thinking about the Snoqualmie Tribe's requests, I wanted to point out that the amendment, as it stands, would not "require revegetation with native species", as they request. It is important to note that the amendment, though offering native plants as an option and a vaguely stated priority, does not require them. Here is the text in NEW SECTION 63:				
	4. Use only native or climate-adaptive plant species that are well suited to thrive in the current and future site conditions;				
	5. Prioritize the selection of native vegetation, with the use of climate-adaptive plants only when appropriate for site conditions;				
	Wherever, throughout the critical areas regulations, when reference is made to revegetation, the two options are presented equally.				
	I wanted to offer a possible amendment to the existing draft that might save a lot of confusion and work for staff and permit applicants. It would likely resolve concerns about undercutting the food web. It would result in a useful list, which you've mentioned Council Member Perry thinks a good idea. I think that it would allow an administrative rule for a list of plants rather than a public rule.				
	NEW IDEA:				
	Today I was researching the incidence of Puget Sound native plants that are also native to surrounding ecoregions. I used the National Wildlife Federation's Native Plant Finder and compared tree species that are favorites of moths (butterflies) and form the foundation of the food web. There is a lot of co-incidence of these plants, not new information for County ecologists. And I was only looking at trees. Yet, I was thinking about it in a new way.				
	Roughly summarized, when comparing my zip code in King County to Wenatchee zip code 98801, I found 13 native trees in common				
32	Extending the proposed 2 ADU unit expansion to unincorporated King County Properties makes sense for a variety of reasons. 1) available off street parking 2) room for self contained septic systems 3) population density is lowest in unincorporated areas 4) addresses need to provide more housing units 5) less disruptive to established neighborhoods	Ray Butler	ADUs	Written	10/31/2025
	Living on a 4 acre home site that currently allows just one ADU while urban neighbors on a quarter acre lot are allowed a 2nd ADU is simply unjust.				

	NOTE Full comment text can be found in accompanying PDF.				
#	Comment	Name of Commente	Topic	Format	Date Received
	Hello all. In looking over the current draft of Section 63, I found myself wondering if staff and Council Member Perry had considered a much simpler approach that was my very last recommendation on October 22 regarding this ordinance. I was petrified to find out that in the mail sent on that day, I forgot to make a pdf of the document that showed edits of the then draft ordinance. The document that I attached was therefor nonsensical in relation to what I said in the message. The brief, correct documents are attached (less than one page each). The approach I recommended was to use genotypes of local natives sourced from warmer, drier areas. I would very much appreciate it if appropriate staff would reread the October 22 email in light of the corrected documents and consider how what I proposed could address the following: The Tribe's request for native plants could be accommodated There would be no conflict with the current Best Available Science Report The food web would not be undermined The approach would not be conflict with the forestry staff approach of studying more resilient genotypes Vague options to use native or climate adaptive plants in certain circumstances, with no qualifying instruction, that are in the code in many locations, would no longer be problematic A public process to develop a list would likely not be required. As currently writen, I think the revised New Section 63 would be very difficult for staff to implement. It does not meet each of the above		Climate-smart Plants	Written	11/19/2025
	listed tests. Would the staff member who is most responsible for drafting the code language please let me know if she or he is able to read and consider the recommendation? Would they please advise me how to proceed as needed?				

	NOTE Full comment text can be found in accompanying PDF.

35	am writing this letter to express my concerns about the proposed Reserve at	Andrew Beers	Proposed Stormwater	Written	11/23/2025
35			Facilitity	vviilleii	1 1/23/2023
	Woodland storm water treatment facility near Black Diamond (see attachment for exact location). It appears to me that the county does not know that the proposed facility is		racilluty		
	immediately adjacent to a private class B drinking water system. on KC Tax Parcel				
	#2821069071 (Class B public water system-W&S #1) which serves our homes on KC				
	Tax Parcels 9071, 9003, 9070, 9069 & 9059. When I contacted Deborah Johnson from				
	the Wellhead Protection Program Coordinator, Office of Drinking Water, Environmental				
	Public Health Division, she looked up the location of the system and the county records				
	showed that it was somewhere on the other side of the river on the valley floor. I have				
	several very serious concerns about the proposed facility being put in. First is the				
	extreme likelihood of contamination directly into the water system. The wellhead is into				
	a spring only a few feet below the surface. Even the spring comes from groundwater,				
	the proximity to the surface makes infiltration from the surface more than likely. Years				
	ago, the area where the facility is proposed was logged by Plum Creek. The next yearly				
	water test showed chloroform levels above permissible standards. This water system				
	had not had any problems with that in over 30 previous years of service beginning in				
	1975. Moreover, the source has never been studied. There is no information as to the				
	depth of the underlying water source and aquifer and the potential for damage from the				
	facility. Another fact is the immediate adjacent location of the waste water facility to the				
	system. It doesn't make any sense at all. Since the county did not know it was there,				
	they processed the application. Now that the location is known, the facility should at				
	least be put in at a different location. Another fact is the slope. Anyone knows that water				
	flows downhill on top as well as under the surface. The pond would be immediately				
	uphill from the water source. Another factor is that Ten Trails will also pump excess				
	floodwater from horseshoe lake into the pond. This brings additional concerns of				
	flooding and spreading wastewater causing damage to homes, property, wildlife and				
	fisheries. The soil and land in the area is exceptionally unstable. There have historically				
	been many landslides in the area. These continue several times yearly on the steep				
	section of the same hill overlooking Green Valley Road well past the entrance to				

King County Comprehensive Plan 2025 Update - Comment Tracking ***NOTE*** Full comment text can be found in accompanying PDF.

	NOTE Full comment text can be found in accompanying PDF.					
#	Comment	Name of Commente	Topic	Format	Date Received	
36	I am writing to comment on the referenced ordinance, in particular the section about "climate-adapted plants". Many improvements have been made in this section over the past year. I appreciate your work.	Carolyn Boatsman	Climate-smart Plants	Written	12/1/2025	
	There are some vestiges of previous versions in the current draft that, when mingled with the new, create some misunderstanding. Also, some of the changes inspire simplifications that would save staff time.					
	NEW SECTION 15: This section is the definition of "climate-adaptive plants". Here is the draft definition:					
	"Climate-adaptive plants: native plants species or variants that are from western North American climates expected to be analogous to the Puget Sound region that are predicted to survive under changing climate conditions."					
	Concerns:					
	1. There is no definition in the King County Code for "native plant species". There is a definition for "native vegetation". I recommend using the definition that you have rather than coming up with a new definition.					
	2. The meaning of the "climate-adapted plants" definition is not clear for reasons of grammatical emphasis. It is very important that this definition be crystal clear as the entire program depends upon it. I will offer a suggestion.					
	3. It would not work to only seek plants that are in climates analogous to the Puget Sound region Often what is needed are plants or seed from different climates where, nonetheless, our native species may be growing as a variant. Because of the different climate, the variant exists. It's the plant's adaptation to climate. Think Douglas fir in Yellowstone Park, and eastern WA, and northern CA, and so on. There are scores of our native plants that grow in other areas in different climates. So many that it would not be an easy task to define them, both the climates and the plants. It is also not a good idea to limit the sourcing of variants to only warmer and drier geographic areas. There are many variables and sometimes variants from analogous climates may work. It is best to leave it to innovation and nature. This is easy to amend.					
	4. The draft definition isn't as clear as it could be regarding the inclusion of our more resilient native plants that are doing well here now and will likely into the future.					
37	Here are the pdf files showing the edits in strikeout and underline. I mistakenly sent the files that did not show the edits. Sorry for the confusion.	Carolyn Boatsman	Climate-smart Plants	Written	12/1/2025

38	The Muckleshoot Indian Tribe Fisheries Division appreciates the opportunity to comment on King County's proposed updates to the		Various	Written	12/1/2025		
	Critical Areas Ordinance (CAO), which the Council will consider on December 2, 2025 for approval. We commend the County's	Tribe					
	continued efforts to align local regulations with the Growth Management Act and the Best Available Science (BAS) requirements						
	intended to protect critical areas and their ecological functions.						
	Despite decades of progress, the loss and degradation of critical areas continue, particularly along riparian and wetland corridors that						
	support salmon populations. Each small encroachment, allowance, exemption, or buffer reduction contributes incrementally to the						
	decline of functional habitat and further limits the resilience of our watersheds. The decline of the Tribe's fisheries resources over the						
	years accentuates the urgency of enacting stronger, science-based protections.						
	The proposed CAO provides a necessary framework, but its effectiveness will depend on closing procedural and definitional gaps that						
	currently allow avoidable impacts to persist through exceptions and administrative flexibility. Strengthening these provisions will help						
	ensure that the County's regulatory intent, to maintain no net loss of ecological function, is achieved in practice.						
	Based on our technical review of the March 2024 draft ordinance, we respectfully recommend several refinements, summarized as						
	follows:						
	1. 21A.24.070 – Critical Area Alteration Exceptions: Limit buffer and setback reductions. These reductions should only be done as a last	-					
	resort. Before accepting reductions, the County should conduct a full alternatives analysis, utilizing peer-reviewed functional						
	assessments and minimum buffers consistent with WDFW (2020) Priority Habitats and Species guidance (buffers equal to site-potential						
	tree height).						
	2. 21A.24.125 – Mitigation Sequencing: Require applicants to document and justify their avoidance and minimization methods prior to						
	accepting mitigation. MITFD comments on Proposed Critical Areas Ordinance Update Page 2						
	3. 21A.24.133 – Mitigation Plans and Off-Site Mitigation: Ensure that mitigation achieves no net loss of ecological function; simple						
	replacement of acreage may not be adequate. Restrict off-site mitigation to the same sub-watershed, with a ten-year monitoring period						
	and adaptive management triggers.						
	4. 21A.24.240–250 – Floodplain and Floodway Standards: Expand "zero-rise" compliance to include ecological criteria such as sediment						
	transport, lateral connectivity, channel migration processes, and aquatic habitat function. Require a review by a County or independent						
	biologist or geomorphologist for an application for floodplain encroachment.						
	5. 21A.24.275 – Channel Migration Zone Protections: Prohibit new development or fill in mapped or likely CMZs except for habitat						
	restoration or structure relocation that improves channel resilience. Apply an interim 200-ft protection where CMZs are unmapped.						
	6. 21A.24.325–335 – Wetland Buffers and Development Standards: Minimize combined buffer averaging and reduction. Adopt minimum						
	10. 2 1. 1.2 1.020 000 Trought Barroto and Bottotophilotic Claridates. Williamize combined barrot attending and reduction. Macht milliamidin	1	l .	L

	I sent comments yesterday about the climate adaptive plants topic, and while those comments offer some something, time is short, so this is way easier to consider and would resolve my greatest concern.	Carolyn Boatsman	Climate-smart Plants	Written	12/2/2025
ŀ	Here's the definition:				
1	NEW SECTION. SECTION 15. There is hereby added to K.C.C. chapter 21A.06 a new section to read as follows:				
á	Climate-adaptive plants: native plant species or variants that are from western North American climates expected to be analogous to the Puget Sound region that are predicted to survive under changing climate conditions.				
t	It states that climate adaptive plants will be native or variants from western North America but it is of no consequence to local wildlife if the plant is native to Wyoming or Utah. If it is not native here, it's a problem for the food web which is built upon relationships between the insects that live here and the plants they evolved with.				
t	If it was meant that the plants would be native OR variants from western North America, that would make all the difference. Addition of two commas would effect a great improvement, one after the word "species" and one after the word "region". Just the two commas would do the trick.				
	In closing, if the current definition remains as is, the program described in Section 63 is greatly changed. When climate-adaptive plants are allowed, they will not be native plants unless the definition says so.				
	I urge you to take a close reading of the definition. It would be wonderful if you added the commas to make the definition both clear and pro-wildlife.				

protection and housing opportunity across King County. Please don't hesitate to reach out if we can provide additional detail or serve as

NOTE Full comment text can be found in accompanying PDF. Name of Commente Topic Comment Date Received Format In preparation for tomorrow's public hearing on the County's critical area ordinance updates, please see MBAKS' attached written 12/2/2025 40 Vanessa Shakoto Various Written comments on Proposed Substitute Ordinance 2024-0408.2. We appreciate the thoughtful work by Chair Perry and County staff in developing the latest version of the Critical Areas Ordinance. While we recognize and support several improvements made, we remain concerned about how some elements could unintentionally hinder housing production during a time of regional need. Key points outlined in the attached letter include: 1.Reduced Setbacks Are Helpful, but Expanded Buffers Still Limit Housing. We support the proposed reduction in critical area setbacks from 15 feet to 10 feet which helps preserve buildable area on constrained lots. However, the broad buffer expansions based on Best Available Science (BAS) are moving forward without clear evidence that existing standards are failing. The County has discretion under the GMA to tailor its regulations to local needs. We urge a more targeted, data-informed approach that reflects both ecological goals and housing feasibility. 2.Shifting On-Site Mitigation from a Requirement to a Priority Improves Feasibility. Changing on-site mitigation from a blanket requirement to a practical priority is a meaningful improvement. This flexibility helps avoid restoration efforts that provide little ecological value. We encourage more support for off-site options where they can deliver better environmental results. 3.Faster SEPA Review Would Better Support Timely Permit Streamlining. We support the new Work Plan Action to evaluate SEPA categorical exemptions but waiting until 2028 delays much-needed streamlining. Most peer jurisdictions have already raised their thresholds to support infill development. We encourage a quicker review and earlier implementation. 4.Updated Customer Guidance Bulletins Improve Transparency. Clearer guidance on required documentation will reduce confusion, improve predictability, and help both staff and applicants avoid delays and resubmittals. 5.Delayed Effective Date Allows Better Transition. The 61-day implementation buffer is appreciated and will allow time for project teams and staff to adjust to the new code. As the Council moves toward final adoption, we urge further refinements to ensure the ordinance supports both environmental
