

MWPAAC Engineering & Planning Subcommittee

April 4, 2024, Meeting Summary

Industrial Waste Program Overview

Mark Henley, Program Manager, Industrial Waste, Wastewater Treatment Division

Mark Henley, Industrial Waste Program Manager, presented an overview of WTD's program. A slide presentation accompanied his presentation and was sent to MWPAAC attendees on April 3rd. The presentation covered

- the history of the program, which notably was one of the first in the country,
- program responsibilities, including types of industries that are regulated,
- the services the program provides,
- the types of authorizations and permits that are granted, and
- an overview of enforcement.

Mark also walked through a number of enforcement case studies, a common theme of which was partnership with local agencies and an overall goal of bringing industries back into compliance.

Each component agency is assigned an Industrial Waste program investigator. This contact is a good person to stay in contact with to track applications, active permits, and enforcement actions. Email the program's general inbox to at info.kciw@kingcounty.gov to find your assigned investigator.
