

Miller-Walker Basin Stewardship

2023 by the numbers

Thank you for a great year!

9000

square feet of streamside restoration maintained. Volunteers worked at Walker Preserve and Miller Creek Trail to remove English ivy and Himalayan blackberry and keep streamside trees and shrubs healthy.

113

Pacific Northwest trees, shrubs, and groundcover planted at Walker Preserve and Miller Creek Trail. Healthy urban forests make this watershed a better home for salmon and people.

99

people volunteered to remove ivy and blackberry, clean up litter, plant and mulch, and conduct salmon surveys.

100+ salmon!

Volunteers surveyed Miller and Walker Creeks throughout October-December to count salmon returns. In 2023, we saw 117 live fish in the creeks and dissected 57 fish carcasses to find out whether they were able to spawn before dying. This work contributes to important research on stream pollution and salmon.

We all can be good stewards of Miller and Walker Creeks! Whether you live right next to the streams or a mile away, your actions can help improve water quality and reduce stormwater in the creeks and beyond. Remember,

Puget Sound Starts Here
