## Did you see the latest project updates?

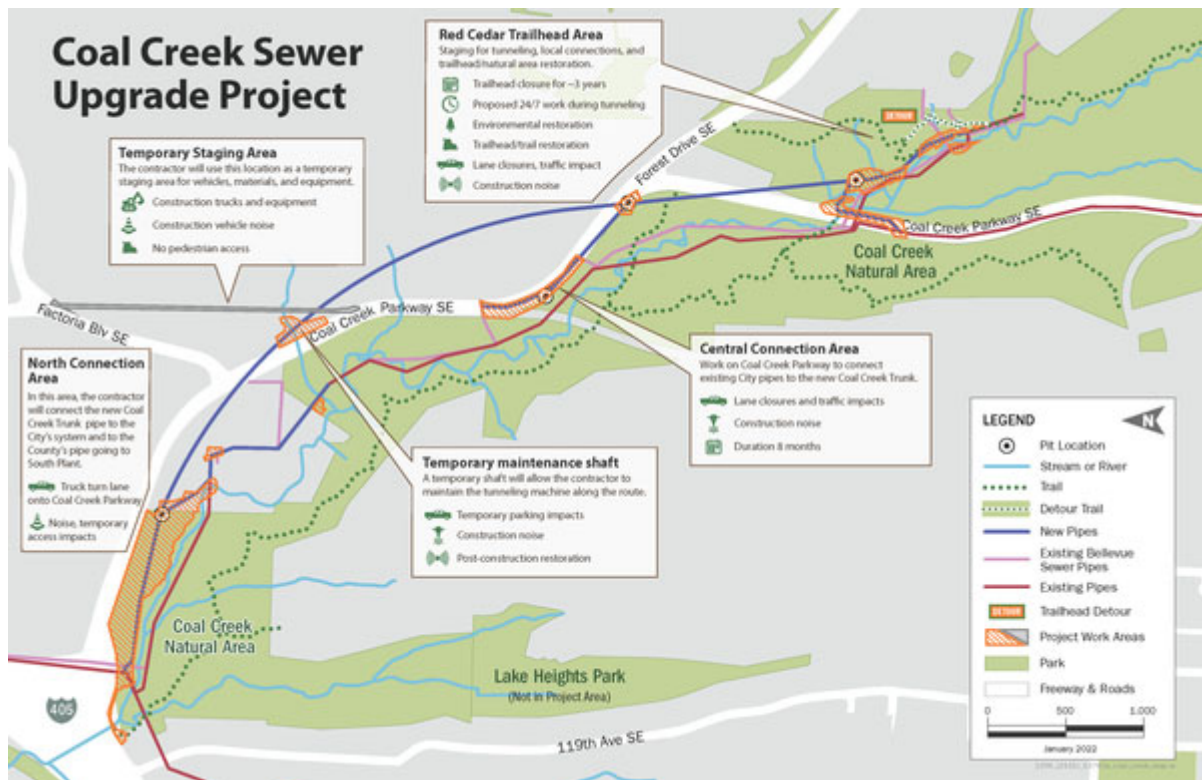

## We're here to discuss them with you.

The Coal Creek Project team knows that there is a lot going on in the world that may be taking your attention. We want to remind you to take a look at the design updates we shared earlier this year. We have updated information about construction locations, community impacts, and durations.

The project is currently in the permitting process. As part of the process, the City of Bellevue will be scheduling a public hearing that you can attend. We want to make sure you have the information and answers you need to participate if you are interested. We are available to answer your questions one-on-one or meet with your community group/organization.

These updates include some elements that neighbors and trail users may want to pay attention to, including:

- Proposed 24/7 work hours at the Red Cedar Trailhead area during tunneling to reduce duration of community impacts and construction risk
- New staging areas
- Completed trail detour around the construction area at the Red Cedar Trailhead

This is a big, complex project with a lot going on. We are glad to discuss the project with you. Please contact us if you would like to talk about the project one on one, or arrange a briefing for your group or organization. Find contact information below.

## About this project

King County's regional wastewater system is an essential service that protects public health, local waterways, and supports our economy. This clean water project will provide increased capacity needed to carry wastewater from Newcastle and part of Bellevue

to King County's South Treatment Plant in Renton. The Coal Creek Sewer Upgrade also provides the opportunity to move much of the active pipe away from the creek in the popular Coal Creek Natural Area.
