

EASTSIDE INTERCEPTOR SECTION 8 (ESI-8) *Rehabilitation Project*

King County

Department of
Natural Resources and Parks
Wastewater Treatment Division

Project update

Understanding site conditions and rehabilitation options

Our team is in the early stages of project design. During summer 2024, the project team will:

- Survey the project area to understand existing conditions in the Eastside Interceptor Section 8 (ESI-8) sewer line and maintenance holes.
- Conduct geotechnical surveys to understand underground conditions.
- Inform community members about the project and upcoming survey work.
- Analyze design alternatives and identify a preferred option to rehabilitate the sewer line and the temporary diversion pipe.

Check back soon for more project updates.
