

Georgetown Wet Weather Treatment Station Project Update

May 2021

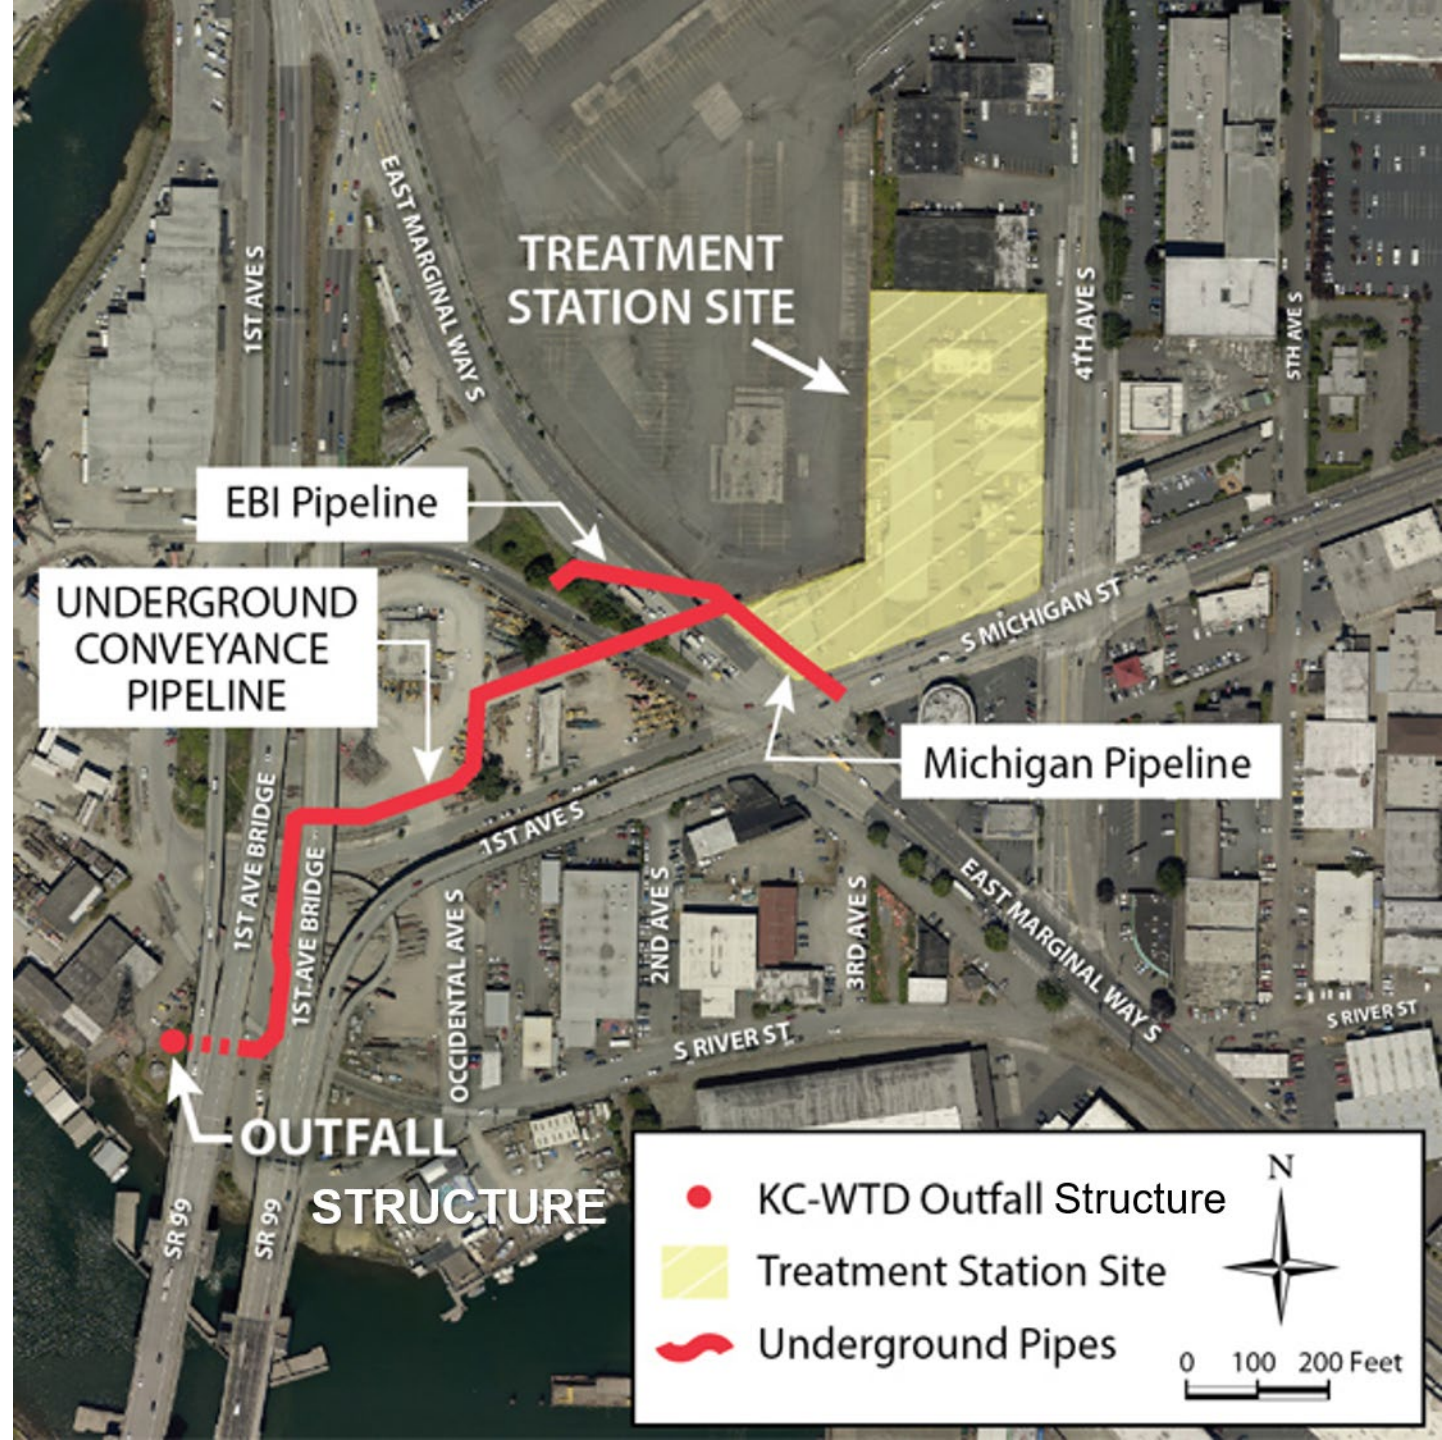

King County is building a Wet Weather Treatment Station at the corner of Fourth Avenue South and South Michigan Street in Georgetown, Seattle

Protecting Our Waters: Commitment to prevent pollution by reducing combined sewer overflows (CSOs).

Designed to treat 70 million gallons of combined rain and wastewater a day during heavy rains.

Project Components

- **Wet weather treatment station**
 - Construction planned for 2018 - 2022.
 - Currently construction is over 80% complete!
 - Capable of treating stormwater and sewage before discharging to the Duwamish River
- **Conveyance pipes**
 - To be completed in May 2021.
 - Underground pipes carry influent and effluent to and from the station.
- **Outfall structure**
 - Completed in March 2020.
 - Pipe to discharge treated water into Duwamish River.

Current Activities

- **Wet weather treatment station**

King County's contractor continues to excavate and pour concrete for the regulator station and influent pump station. Main body of work now is installing equipment.

- **Conveyance**

Work is expected to be completed later this month.

The Georgetown Wet Weather Treatment Station Virtual Tour Video

Community Input and Outreach

- King County is committed to working with the community every step of the way during construction:
 - Hosted a Design Advisory Group from 2014 - 2016
 - Attended/hosted in-person events since 2014*
 - Shared monthly project updates and regular project newsletters
 - Individual meetings with community groups and organizations
 - 24/7 construction hotline
- In November 2020, King County developed a virtual tour video (in Spanish and English) highlighting construction progress and planned activities

*King County is following public health guidelines in response to COVID-19. All in-person events are currently on hold.

Landscaping, green roof, and
controlling stormwater on site

- The station includes these to promote environmental and social sustainability:
 - New trees
 - Green roof
 - Rain barrels and rain gardens
 - Bio swales in landscaping

What is Next?

- Restoration to areas impacted by conveyance construction.
- Construction at the treatment station to continue.
