

August 16, 2017

The Georgetown Wet Weather Treatment Station project team invites you to join us at two community events in August!

King County will be at the [Duwamish River Festival](#) on Saturday, Aug.26, in Duwamish Waterway Park. We'll be there from noon to 6 p.m. ready to discuss the Georgetown Wet Weather Treatment Station. Come find out what's happening with construction and final design plans for the treatment station. Hope to see you there!

King County team members at last year's Duwamish River Festival

You can also join us on Aug. 26 to view a unique community art display supported by the Georgetown project. The [Arts in Nature Festival](#) at Camp Long in West Seattle will include artwork developed in partnership with Nature Consortium and Seattle Public Schools. This spring, fifth grade students at Maple Elementary learned about combined sewer overflows, the Georgetown Wet Weather Treatment Station, and King County's work in cleaning up the Duwamish River. From this experience, students created water art that speaks to their connection to clean water and the river. This art will be shown on the site fence during five years of construction. Visit the [WTD blog](#) and watch the video to learn more about this special community art project. Below, Nature Consortium ECO Arts Director Yeggy Michael shows off student water marbling.

Hope to see you there!
