

King County to replace sewer pipelines in Redmond

Details inside!

We'll be with you every step of the way!

We know that you will have questions and concerns about this project, whether you live, work, socialize, recreate, or commute in the area. We will work with project neighbors and area users, community groups and organizations, schools, businesses, the City of Redmond, and King County Parks. We're committed to a timely response to questions and concerns and we are available for meetings, briefings, and events. Our team is in the process of reaching out to neighbors and organizations along the project route. If you are interested in scheduling a briefing for your community or organization, please contact us.

You can also visit the project website and take a **short survey** to let us know the best way to work with you. We look forward to hearing from you on how we can meet your needs.

SEWER UPGRADE PROJECT NEWS

January 2016

King County to replace regional sewer pipelines in Redmond

Reliable sewer service is the cornerstone of healthy communities and a healthy environment.

King County Wastewater Treatment Division (WTD) has collected and treated wastewater for 50 years – half a century! Wherever you live, work, socialize, or recreate in Redmond, the water you use takes a journey down your drain, travels through your pipes, the local sewer system, and finally, through the County's pipes to an award-winning treatment plant.

After decades of service, it's time for the County's pipes to be replaced. While this project may mean temporary construction inconveniences, the new sewer will serve your community for the next 50 to 60 years.

In early 2016, WTD's team will present a proposed sewer pipe alignment and project design will begin. Design, including environmental review and permitting, will continue through 2017. Construction is expected to begin in 2018 and be completed in 2021.

PROJECT AREA

The map on page 2 shows the route for the new Lake Hills/ Northwest Lake Sammamish sewer line. The new pipeline is in the same location as the old pipeline for most of the route. The project team was able to move the alignment in some locations to reduce impacts to people and the environment. However, complicated wastewater flows and area development limited where the pipeline could be located. King County's team will be working closely with neighbors and groups all along the alignment to provide information, answer questions, and address concerns.

The Lake Hills/Northwest Lake Sammamish sewer line receives wastewater from homes, businesses, schools, and other organizations in an area of almost 5,000 square acres in Redmond. The water you use travels down your drains to the City of Redmond's sewer system. The City of Redmond's pipes send the wastewater to King County's system, where it is carried to the Brightwater Treatment Plant in Woodinville for treatment.

WHERE DOES YOUR WASTEWATER GO?
