

# NORTH MERCER ISLAND/ENATAI Sewer Upgrade Project

## What to expect after construction at Enatai Beach Park in Bellevue

### Coordinate with the City of Bellevue to restore all disturbed areas:

- Enhance a section of shoreline north of swim area by installing large logs and return the shoreline to a pebbly surface. This will provide habitat for spawning salmon and other wildlife that use the shoreline
- Odor control stack
- Electrical cabinets
- Access hatches
- New access road

All these will be compatible with future phases of park development.

The only permanent above-ground structures to remain will be:

- the odor control cabinet; and
- the inlet and exhaust pipes.

All are located under the I-90 Bridge.
