Health Advisory: Measles case associated with a domestic flight in a King County resident
October 29, 2025

Actions requested

Be aware of a confirmed measles case in a vaccinated King County adult that was exposed to a [previously reported measles case](#) on an October 13, 2025 flight.

- [Visit our measles website](#) to view public locations and times where this confirmed measles case spent time while contagious. Anyone who was at these locations during the times listed could have been exposed to measles.
 - There is no ongoing risk for measles exposure at these locations.
- **Secondary cases would most likely occur between October 29 – November 17, 2025.**
- **Remain vigilant for possible cases of measles even in patients that are vaccinated.**
 - MMR vaccination remains the most important tool for preventing measles infections and spread but with increasing measles infections in the United States, rare breakthrough infections are more likely.
 - [Nationally](#), 92% of cases this year are among people who are unvaccinated, 4% have one dose, and 4% are people with two doses of the MMR vaccine.
- Refer to [Measles actions for Healthcare Providers](#) for more details on immediate isolation, notification, testing, and management of patients with suspected measles.
