Dear Parent or Guardian,

Our records show that your child is **not up to date on their measles, mumps, and rubella (MMR) vaccine**.

If there is a **measles outbreak** at our program, or in the community, the health department may require anyone who is not up to date on their MMR vaccine, or who cannot show proof of immunity to (protection against) measles, to **stay home for up to 21 days** after the last exposure. This helps stop the spread of measles.

The MMR vaccine is the best way to protect your child and others. If your child has recently received vaccines, please provide an updated Certificate of Immunization Status (CIS) form.

Measles is very contagious and can spread quickly. It can also cause serious health problems. For more information, please visit the Washington State Department of Health: doh.wa.gov/measles.

We encourage you to talk with your health care provider if you have any questions about measles and the MMR vaccine.

Sincerely,
