

WHAT IS FENTANYL?

- Fentanyl is a very strong painkiller that is in a powder or pill
- It is much stronger and more addictive than heroin or morphine
- It's very easy for people to accidentally overdose on a small amount of fentanyl
- Naloxone (Narcan) is an easy-to-use nasal spray that can quickly save people from an overdose. Keeping Naloxone on hand, or calling 911, can save someone's life.
