

Fall City on-site community septic system

What to expect during construction

- ▶ Access to local business will be maintained throughout construction.
- ▶ Crews will work during the day. Work will sometimes be noisy.

Temporary closures and effects on parking

- ▶ Bernard Memorial Park will reopen to the public in spring 2026.
- ▶ The alley behind businesses on Redmond-Fall City Road SE between 334th Place and Preston-Fall City Road SE will be closed intermittently in 2025 and early 2026.
- ▶ Parking on the south side of Redmond-Fall City Road SE will be intermittently unavailable during active construction in 2025 and 2026.

Site

The project site is in the Fall City Business District, next to the Snoqualmie River and near the intersections of state routes 202 and 203.

Overview

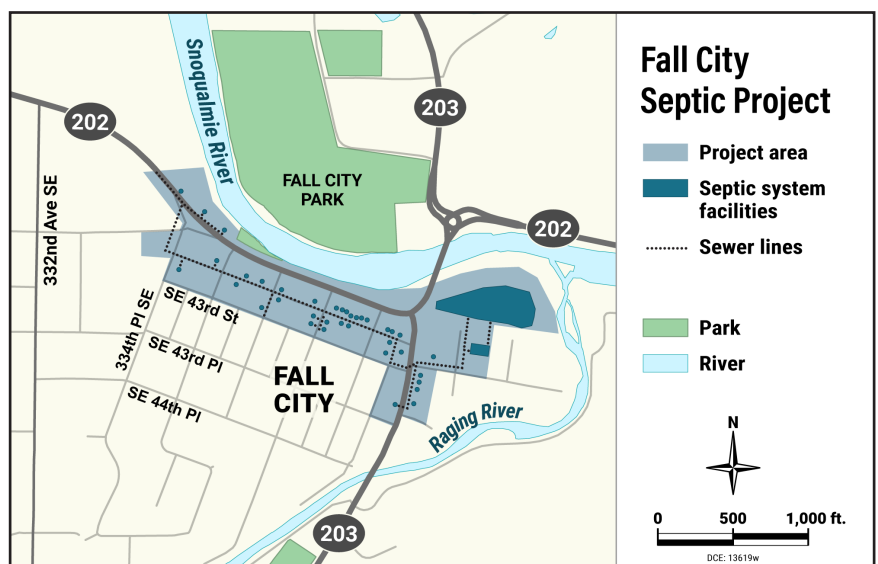

Fall City is an unincorporated rural town with a population of less than 5,000 people and more than 40 properties in the business district. The town sits where the Snoqualmie River and Raging River come together. The area is important to local Native American tribes.

This project supports the Fall City Business District and the community's economic future.

The Fall City Business District has many businesses and residences with broken wastewater systems. A 2016 survey showed that only 14 of 62 properties in the business district had updated septic systems. The failing older systems posed a public health risk to the surrounding community and an environmental threat to nearby rivers.

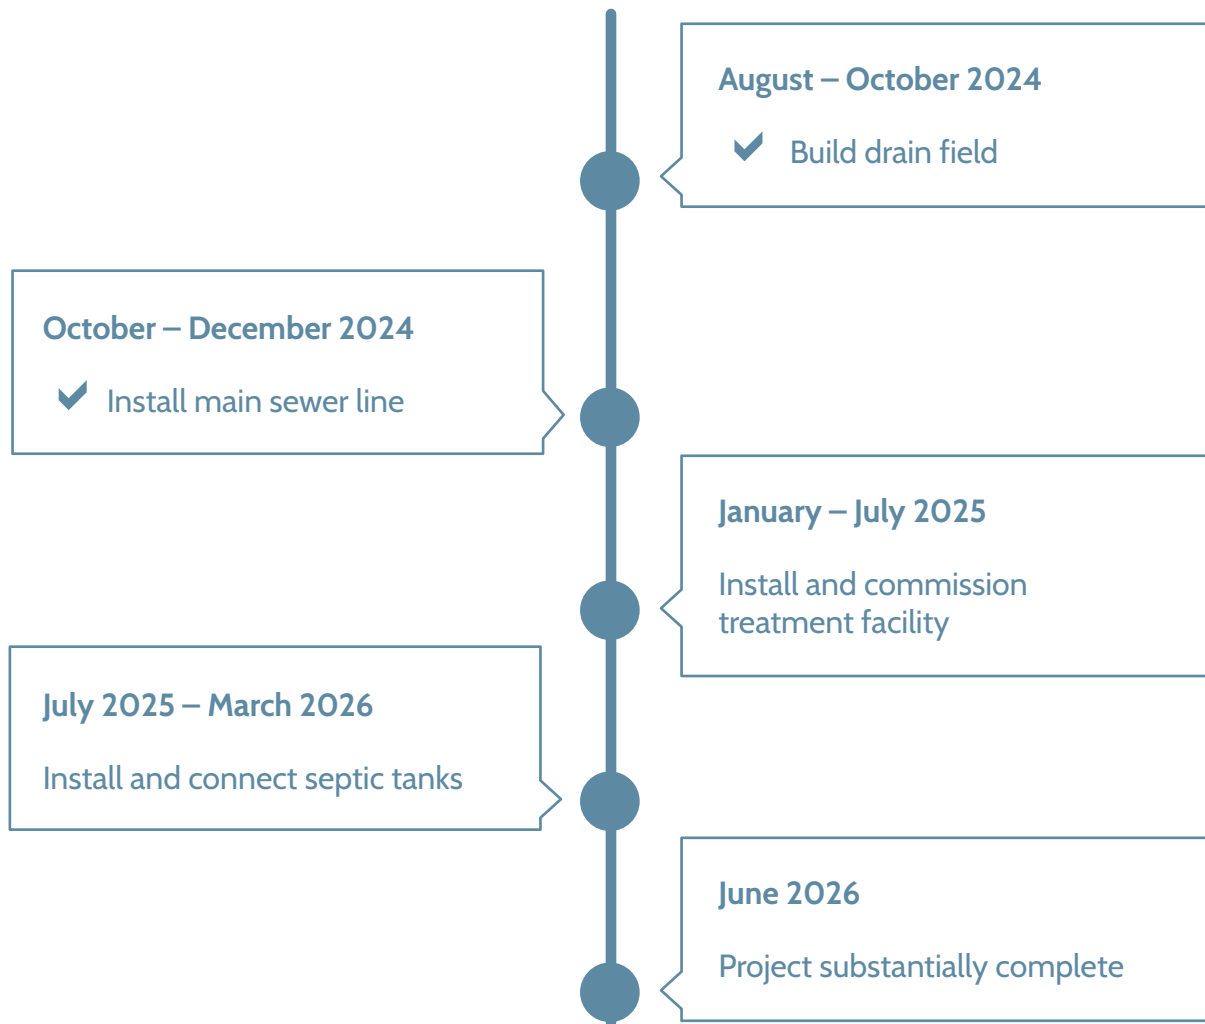

Currently, local businesses cannot expand or keep up with changing demands from customers. For more than 10 years, the Fall City community asked for help to solve this problem.

With the support of state and local elected leaders and King County, we moved forward with the Fall City on-site septic project, which connects 46 properties to an underground pre-treatment facility. The project will repair all failing and non-conforming systems and the new system will provide capacity for conservative growth in the business district. It will treat waste to the highest quality standards required by the Washington State Department of Health.
